DEAR VOLVO OWNER

THANK YOU FOR CHOOSING VOLVO

We hope that you will enjoy many years of driving pleasure in your Volvo. The car has been designed for the safety and comfort of you and your passengers. Volvo is one of the safest cars in the world. Your Volvo has also been designed to satisfy all current safety and environmental requirements.

In order to increase your enjoyment of the car, we recommend that you familiarise yourself with the equipment, instructions and maintenance information contained in this owner’s manual.

Introduction

Owner’s Manual

A good way of getting to know your new car is to read the owner’s manual, ideally before your first journey. This will give you the opportunity to familiarise yourself with new functions, to see how best to handle the car in different situations, and to make the best use of all the car’s features. Please pay attention to the safety instructions contained in the manual:

**WARNING**

“Warning!” texts indicate where there is a risk of personal injury in the event of the instructions not being followed.

**IMPORTANT**

“Important!” texts indicate a risk of damage to the car in the event of the instructions not being followed.

The equipment described in the owner’s manual is not present in all models. In addition to standard equipment, this manual also describes options (factory fitted equipment) and certain accessories (extra equipment).

**NOTE**

Volvo cars are adapted for the varying requirements of different markets, as well as for national or local legal requirements and regulations. If you are uncertain over what is standard, an option or an accessory then contact your Volvo dealer.

The specifications, design features and illustrations in this owner’s manual are not binding. We reserve the right to make modifications without prior notice.

© Volvo Car Corporation
Volvo Cars and the environment

Volvo Car Corporation's environmental philosophy

Environmental care, safety and quality are the three core values which influence all operations of the Volvo Car Corporation. We also believe that our customers share our consideration for the environment.

Your Volvo complies with strict international environmental standards and is also manufactured in one of the cleanest and most resource-efficient plants in the world. Volvo Car Corporation has global ISO certification, which includes the environmental standard (ISO 14001) covering factories, central functions, as well as several of our other units. We also set requirements for our partners so that they work systematically with environmental issues.

EPI (Environmental Product Information) is supplied for all Volvo models. Here you can see how the environment is affected during the entire lifecycle of the car.

Read more at www.volvocars.com/EPI.

Fuel consumption

Volvo cars have competitive fuel consumption in each of their respective classes. Lower fuel consumption generally results in lower emission of the greenhouse gas, carbon dioxide.

It is possible for the driver to influence fuel consumption. For more information read under the heading Reducing environmental impact on page 9.
Volvo Cars and the environment

Efficient emission control

Your Volvo is manufactured following the concept Clean inside and out – a concept that encompasses a clean interior environment as well as highly efficient emission control. In many cases the exhaust emissions are well below the applicable standards.

In addition there is a special radiator coating, PremAir®1, which can convert hazardous ground-level ozone into pure oxygen when the ozone passes the radiator. The higher the ozone content in the air the more ozone is converted.

Clean air in the passenger compartment

A passenger compartment filter prevents dust and pollen from entering the passenger compartment via the air intake.

A sophisticated air quality system, IAQS2 (Interior Air Quality System) ensures that the incoming air is cleaner than the air in the traffic outside.

The system consists of an electronic sensor and a carbon filter. The incoming air is monitored continuously and if there is an increase in the level of certain unhealthy gases such as carbon monoxide then the air intake is closed. Such a situation may arise in heavy traffic, queues and tunnels for example.

The entry of nitrous oxides, ground-level ozone and hydrocarbons is prevented by the carbon filter.

Textile standard

The interior of a Volvo is designed to be pleasant and comfortable, even for people with contact allergies and for asthma sufferers. All of our upholstery and interior textiles are tested with respect to certain unhealthy substances and allergens as well as emissions. This means that all textiles fulfil the requirements in the Öko-Tex 100 standard3, a major advance towards a healthier passenger compartment environment.

Öko-Tex certification covers seatbelts, carpets, thread and fabrics for example. The leather in the upholstery undergoes chrome-free tanning with natural plant substances and fulfils the certification requirements.

Volvo workshops and the environment

Regular maintenance creates the conditions for a long service life and low fuel consumption for your car, and in this way you contribute to a cleaner environment. When Volvo’s workshops are entrusted with the service and maintenance of your car it becomes part of our system. We make clear demands regarding the way in which our workshops are designed in order to prevent spills and discharges into the environment. Our workshop staff have the knowledge and the tools required to guarantee good environmental care.

1 Option for 5-cylinder engines.
2 PremAir® is a registered trademark of Engelhard Corporation.
3 More information on www.oekotex.com
Reducing environmental impact

You can help reduce environmental impact, for example, by driving economically, by purchasing eco-labelled car care products and by servicing and maintaining the car according to the instructions in the owner’s manual.

The following hints will help you to do your bit for the environment:

- Decrease fuel consumption by choosing ECO tyre pressure, see page 153.
- Since a roof load and ski box increase air resistance, leading to significantly higher fuel consumption, they should be removed immediately after use.
- Remove unnecessary items from the car – the greater the load the higher the fuel consumption.
- Is your car equipped with an engine block heater? If so, use it for a few hours before starting from cold to reduce fuel consumption and exhaust emissions.
- Drive gently and avoid braking too hard.
- Drive in the highest gear possible. Low engine speeds result in lower fuel consumption.
- Use engine braking to slow down.
- Avoid idling. Take consideration of local regulations. Switch off the engine in traffic queues.
- Always dispose of environmentally hazardous waste, such as batteries and oils, in an environmentally responsible manner. If uncertain, consult an authorised Volvo workshop for advice.
- Service your car regularly.
- High speed increases consumption considerably due to increased wind resistance. A doubling of speed increases wind resistance four times.

These hints will help you to reduce your fuel consumption without increasing your travel time or lessening the enjoyment of driving. Apart from being kind to your car, you’ll be saving money - and the Earth’s resources.

</table>
Always use a seatbelt

Tensioning the hip strap. The belt must be positioned low down.

Heavy braking can have serious consequences if the seatbelts are not used, so make sure that all passengers use their seatbelts. It is important that the seatbelt lies against the body so that it can provide maximum protection. Do not lean the backrest too far back. The seatbelt is designed to protect in a normal seating position.

Putting on a seatbelt:

- Pull the seatbelt out slowly and secure it by pressing the buckle into the lock. A loud "click" indicates that the seatbelt has locked.

Releasing the seatbelt

- Press the red lock button and then let the seatbelt retract. If the seatbelt does not retract fully, feed the seatbelt in by hand so that it does not hang loose.

The seatbelt locks and cannot be withdrawn
- if it is pulled out too quickly.
- during braking and acceleration.
- if the car leans heavily

Keep in mind the following:
- do not use clips or anything else that can prevent the seatbelt from fitting properly
- ensure that the seatbelt is not twisted or caught on anything
- the hip strap must be positioned low down (not over the abdomen).
- tension the hip strap over the lap by pulling the diagonal shoulder belt as illustrated

**WARNING**

The seatbelts and airbags interact. If a seatbelt is not used or is used incorrectly, this may diminish the protection provided by the airbag in the event of a collision.

**WARNING**

Each seatbelt is designed for only one person.

**WARNING**

Never modify or repair the seatbelt yourself. Contact an authorised Volvo workshop. If the seatbelt has been subjected to a major load, such as in a collision, the entire seatbelt must be replaced. Some of the seatbelt’s protective properties may have been lost even if the seatbelt does not appear damaged. The seatbelt must also be replaced if it shows signs of wear or damage. The new seatbelt must be type-approved and designed for installation at the same location as the replaced seatbelt.
Seatbelts and pregnancy

The seatbelt should always be worn during pregnancy. But it is crucial that it be worn in the correct way. The diagonal section of the seatbelt should wrap over the shoulder then be routed between the breasts and to the side of the abdomen. The lap section of the seatbelt should lay flat over the thighs and as low as possible under the abdomen. It must never be allowed to ride upward. Remove all slack from the seatbelt and ensure that it fits close to the body. In addition, check that there are no twists in the seatbelt.

As the pregnancy progresses, pregnant drivers should adjust their seats and steering wheel such that they can easily maintain full control of the vehicle as they drive (which means they must be able to easily operate the foot pedals and the steering wheel). Within this context, they should strive to position the seat with as large a distance as possible between the abdomen and the steering wheel.

Seatbelt reminder

The seatbelt warning symbol in the combined instrument panel and above the rearview mirror illuminates until the driver and front seat passenger buckle their seatbelts. The seatbelt reminder switches off after 6 seconds if speed is below 10 km/h. If the driver or front seat passenger have not buckled their seatbelts, the reminder switches on again when the speed exceeds 10 km/h and switches off if the speed drops below 5 km/h.

If the seatbelt is released, the function reacts when speed exceeds 10 km/h.
Seatbelts

Certain markets
An unbelted driver will be reminded to fasten his or her seatbelt by means of an audio and visual reminder. At low speed, the audio reminder will sound for the first 6 seconds.

Seatbelt tensioner
All the seatbelts (except the centre rear seatbelt) are equipped with seatbelt tensioners. A mechanism in the seatbelt tensioner tightens the seatbelt around the body in the event of a sufficiently violent collision. The seatbelt then provides more effective restraint for passengers.

NOTE
The seatbelt reminder is intended for an adult sitting in the front seat. If a belt-fitted child seat is fitted in the front seat, the seatbelt reminder does not switch on.
The airbag system\(^1\) is continually monitored by the system control module. The warning symbol in the combined instrument panel illuminates when the ignition key is turned to position I, II or III. The symbol goes out after approx. 6 seconds provided the airbag system\(^1\) is working correctly. As well as the warning symbol, a message may appear on the display in appropriate cases. If the warning symbol malfunctions, the warning triangle illuminates and the message SRS AIRBAG SERVICE URGENT appears on the display. Contact an authorised Volvo workshop urgently.

\[\text{WARNING}\]

If the warning symbol for the airbag system remains on or illuminates while driving, it means that the airbag system does not have full functionality. The symbol can indicate a fault in the seatbelt tensioner system, SIPS, the SRS system or the IC system. Contact an authorised Volvo workshop immediately.

\(^1\) Includes SRS and seatbelt tensioner, SIPS and IC.
Airbags (SRS)

Airbag (SRS) on the driver’s side

The car has an SRS airbag (Supplemental Restraint System) in the steering wheel to supplement the protection afforded by the seatbelt on the driver’s side. This airbag is folded up into the centre of the steering wheel. The steering wheel is marked **SRS AIRBAG**.

**WARNING**
The seatbelts and airbags interact. If a seatbelt is not used or is used incorrectly, this may diminish the protection provided by the airbag in the event of a collision.

Passenger airbag (SRS)

The car has an airbag to supplement the protection afforded by the seatbelt on the passenger side. This airbag is folded up into a compartment above the glovebox, and its cover panel is marked **SRS AIRBAG**.

**WARNING**
To minimise the risk of injury if the airbag deploys, passengers must sit as upright as possible with their feet on the floor and backs against the backrest. Seatbelts must be secured.

**WARNING**
Never place a child in a child seat or on a booster cushion in the front seat if the airbag (SRS) is activated.¹

Never allow a child to stand or sit in front of the front passenger seat. No one shorter than 140 cm should sit in the front passenger seat if the airbag (SRS) is activated.

Failure to follow the advice given above can endanger the life of the child.

¹ For information on activated/deactivated airbag (SRS) see page 18.

¹ Not all cars have a passenger airbag (SRS). This can be unselected when the car is ordered.
The SRS system consists of airbags and sensors. A sufficiently violent collision trips the sensors and the airbag(s) are inflated with hot gas. To cushion the impact, the airbag deflates when compressed. When this occurs, smoke escapes into the car. This is completely normal. The entire process, including inflation and deflation of the airbag, takes place within tenths of a second.

**WARNING**

Repairs must only be performed by an authorised Volvo workshop. Any interference in the airbag system could cause malfunction and result in serious injury.

**NOTE**

The sensors react differently depending on the course of the collision and whether the seatbelts on the driver’s side and passenger side are in use. It is therefore possible that only one (or none) of the airbags may inflate in a collision. The SRS system senses the force of the collision on the car and adapts accordingly so that one or more airbags is deployed. The airbags have a function whereby their capacities are adapted to the collision force to which the car is subjected.
Activating/deactivating the airbag (SRS)

Location of the passenger airbag in left-hand drive and right-hand drive cars

**WARNING**
Do not put objects in front of or above the instrument panel where the passenger airbag is located.

**PACOS**

Indicator showing that the passenger airbag (SRS) is deactivated.

The airbag (SRS) for the front passenger seat can be deactivated if the car is equipped with a PACOS switch, see page 19.

**Message**
A text message in the roof panel indicates that the airbag (SRS) for the front passenger seat is deactivated (see illustration above).

**Activating/deactivating**
The switch for the passenger airbag, PACOS (Passenger Airbag Cut Off Switch), is located on the passenger end of the instrument panel and is accessible when the passenger door is open (see under the heading, Switch – PACOS below).

Check that the switch is in the required position. Volvo recommends that the key blade be used to change position (other items with a shape similar to a key can also be used).

**WARNING**
Failure to follow the advice given above can endanger life.

**WARNING**
Never place a child in a child seat or on a booster cushion in the front seat if the airbag is activated. Failure to follow this advice can endanger the life of the child.

**WARNING**
If the car is equipped with a front passenger airbag (SRS), but does not have PACOS, the airbag will always be activated.

\(^1\) PACOS (Passenger Airbag Cut Off Switch)
Activating/deactivating the airbag (SRS)

Switch - PACOS

1. The airbag is activated. With the switch in this position, persons taller than 140 cm can sit in the front passenger seat, but never children in a child seat or on a booster cushion.

2. The airbag is deactivated. With the switch in this position, children in a child seat or on a booster cushion can sit in the front passenger seat, but never anybody taller than 140 cm.

WARNING
Do not allow anyone to sit in the front passenger seat if the text message in the roof panel indicates that the airbag (SRS) is deactivated and the airbag warning symbol is displayed in the combined instrument panel. This indicates that there has been a severe malfunction. Visit an authorised Volvo workshop urgently.

WARNING
Activated airbag (passenger seat): Never place a child in a child seat or on a booster cushion in the front passenger seat when the airbag is activated. This also applies to anyone shorter than 140 cm.

Deactivated airbag (passenger seat): No one taller than 140 cm should ever sit in the front passenger seat when the airbag is deactivated.

Failure to follow the advice given above can endanger life.
**Side airbags (SIPS bags)**

**Side airbags – SIPS bags**

A large proportion of the collision force is transferred by the SIPS (Side Impact Protection System) to beams, pillars, the floor, the roof and other structural parts of the body. The side airbags at the driver’s and front passenger seats protect the chest area and are an important part of the system. The side airbags are located in the front seat backrests.

**WARNING**

Repairs must only be performed by an authorised Volvo workshop. Work on the SIPS bag system could cause malfunction and result in serious personal injury.

**WARNING**

Do not put objects in the area between the outside of the seat and the door panel, since this area is required by the side airbag.

**WARNING**

Only use car seat covers approved by Volvo. Other seat covers may impede the operation of the side airbags.

**WARNING**

The side airbags constitute a supplement to the seatbelts. Always wear your seatbelt.

---

**Child seats and side airbags**

The side airbag does not diminish the protection provided by the car to children seated in a child seat or on a booster cushion. A child seat or booster cushion can be placed on the front passenger seat provided that the car does not have an activated\(^1\) passenger airbag.

---

\(^1\) For information on activated/deactivated airbag (SRS) see page 18
Side airbags (SIPS bags)

SIPS bags

Driver’s seat, left-hand drive

The SIPS bag system consists of side airbags and sensors. A sufficiently violent collision trips the sensors and the side airbags are inflated.

Front passenger seat, left-hand drive

The airbag inflates between the occupant and the door panel and thereby cushions the initial impact. The airbag deflates when compressed. The side airbag is normally only deployed on the side of the collision.

Location of airbag decal in door opening on front passenger side
The inflatable curtain IC (Inflatable Curtain) is a supplement to the SIPS and the airbags. It is fitted in the headlining along both sides of the roof and protects all of the vehicle’s outer seats. A sufficiently violent collision trips the sensors and the inflatable curtain is inflated. The inflatable curtain helps to prevent the driver and passengers from striking their heads on the inside of the car during a collision.

**WARNING**
Never hang or fasten anything on the roof handles. The hook is only intended for light outer garments (not for hard objects such as umbrellas). Do not screw or fit anything to the headlining, door pillars or side panels. This could compromise the intended protection. Only use Volvo genuine parts that are approved for placement in these areas.

**WARNING**
Do not load the car higher than 50 mm under the top edge of the rear passenger windows. Otherwise, the intended protection of the inflatable curtain, which is hidden in the headlining, may be compromised.

**WARNING**
The inflatable curtain is a supplement to the seatbelts. Always use a seatbelt.
Protection against whiplash injury – WHIPS

The whiplash protection system (WHIPS) consists of energy absorbing backrests and specially designed head restraints for the front seats. The system is actuated by a rear-end collision, where the angle and speed of the collision, and the nature of the colliding vehicle all have an influence.

Properties of the seat
When the WHIPS system is deployed, the front seat backrests fall backward to alter the position of the driver and front seat passenger. This diminishes the risk of whiplash injury.

WARNING
The WHIPS system is a supplement to the seatbelts. Always wear your seatbelt.

WARNING
Never modify or repair the seat or WHIPS system yourself. Contact an authorised Volvo workshop.

WHIPS system and child seats/booster cushions
The WHIPS system does not diminish the protection provided by the car to children seated in a child seat or on a booster cushion.

Correct seating position
For the best possible protection, the driver and front seat passenger should sit in the centre of the seat with as little space as possible between the head and the head restraint.
**WHIPS**

**Do not obstruct the WHIPS system**

*WARNING*
Do not squeeze rigid objects between the rear seat cushion and the front seat backrest. Make sure you do not obstruct the function of the WHIPS system.

*WARNING*
If a rear seat backrest is folded down, the corresponding front seat must be moved forward so that it does not touch the folded backrest.

*WARNING*
If a seat has been subjected to extreme forces, such as due to a rear-end collision, the WHIPS system must be checked by an authorised Volvo workshop. Part of the WHIPS system's protective capacity may have been lost even if the seat appears to be undamaged. Contact an authorised Volvo workshop to have the system checked even after a minor rear-end collision.
Function

Volvo’s Roll-Over Protection System (ROPS) has been designed to reduce the risk of the car overturning and to provide the best possible protection in the event of such an accident.

The system consists of:

- A stabiliser system, RSC (Roll Stability Control) that minimises the risk of overturning during sudden evasive manoeuvres or the like or if the car skids.
- Increased protection for the driver and passengers through a reinforced body, inflatable curtains and seatbelt tensioners in all seats. See also page 14 and page 22.

The RSC system uses a gyro sensor which registers changes in the car’s lateral inclination angle. This information is then used to calculate the risk for overturning. If a risk is detected, the DSTC system is engaged, engine speed is reduced and one or more wheels are braked until the car returns to a stable position.

For more information on the DSTC system, see page 44 and page 123.

**WARNING**

Under normal driving conditions, the RSC system improves the car’s road safety, but this must not be taken as a reason to increase speed. Always follow the usual precautions for safe driving.
## When the systems deploy

<table>

</tr>
</tbody>
</table>

<sup>1</sup>The bodywork of the car could be greatly deformed in a collision without airbag deployment. A number of factors such as the rigidity and weight of the object hit, the speed of the car, the angle of the collision etc. affects how the different safety systems of the car are activated.

If the airbags have been deployed, the following is recommended:

- Have the car transported to an authorised Volvo workshop. Do not drive with deployed airbags.
- Have an authorised Volvo workshop replace components in the car’s safety system.
- Always contact a doctor.

**NOTE**

The SRS, SIPS, IC and belt tensioner systems are deployed only once during a collision.

**WARNING**

The airbag system control module is located in the centre console. If the centre console is drenched with water or other liquid, disconnect the battery cables. Do not attempt to start the car since the airbags may deploy. Have the car transported to an authorised Volvo workshop.

**WARNING**

Never drive with deployed airbags. They can make steering difficult. Other safety systems may also be damaged. The smoke and dust created when the airbags are deployed can cause skin and eye irritation after intensive exposure. In case of irritation, wash with cold water. The rapid deployment sequence and airbag fabric may cause friction injury and burns to the skin.
Children should sit comfortably and safely

The position of a child in the car and the choice of equipment is dictated by the child’s weight and size, for more information see page 29.

NOTE

Regulations regarding the placement of children in cars vary from country to country. Check what laws apply.

Children of all ages and sizes must always sit correctly secured in the car. Never allow a child to sit on the knee of a passenger.

Volvo’s own child safety equipment is designed for your car. Use Volvo genuine equipment to best ensure that the mounting points and attachments are correctly positioned and are sufficiently strong.

NOTE

If problems arise when fitting child safety products, contact the manufacturer for clearer instructions.

Child seats

Child seats and airbags are not compatible. Volvo has child safety products that are designed for and tested by Volvo.

NOTE

When using other child safety products it is important to read the installation instructions included with the product.

Do not attach the straps for the child seat to the horizontal adjustment bar, springs, rails or beams under the seat. Sharp edges can damage the straps.

Allow the back of the child seat to rest against the instrument panel. This applies to cars without a passenger airbag, or where the airbag is deactivated.

Location of child seats

You may place:

- a child seat or booster cushion on the front passenger seat, provided the passenger airbag is not activated (for information on activating/deactivating the airbag (SRS), see page 18)
- a rear-facing child seat in the rear seat that uses the back of the front seat as support.

Always place a child in the rear seat if the passenger airbag is activated. A child in a child seat on the front passenger seat may suffer serious injury if the airbag deploys.

NOTE

Regulations regarding the placement of children in cars vary from country to country. Check what laws apply.

NOTE

If problems arise when fitting child safety products, contact the manufacturer for clearer instructions.

NOTE

When using other child safety products it is important to read the installation instructions included with the product.

Do not attach the straps for the child seat to the horizontal adjustment bar, springs, rails or beams under the seat. Sharp edges can damage the straps.
**Child safety**

**WARNING**

Never place a child in a child seat or on a booster cushion in the front seat if the airbag (SRS) is activated.¹

No one shorter than 140 cm should sit in the front passenger seat if the airbag (SRS) is activated.

Failure to follow the advice given above can endanger the life of the child.

¹For information on activated/deactivated airbag (SRS) see page 16.

**WARNING**

Booster cushions/child seats with steel braces or some other design that could rest on the seatbelt buckle’s opening button must not be used, as they could cause the seatbelt buckle to open accidentally.

Do not allow the upper section of the child seat to rest against the windscreen.

---

*Airbag decal*

Decal located on dashboard end face.

Decal located on instrument panel end face (Australia only).
**Recommended child seats**

<sup>1</sup>In cars seating seven, the seat row must be in its rearmost position when using a child seat. For other child seats your car should be included in the manufacturer's enclosed list of vehicles or be universally approved in accordance with the ECE R44 legal requirement.
Integrated booster cushions (option)

Volvo's integrated booster cushion for the centre rear seat is specially designed to provide optimum safety for children. Combined with normal seatbelts, the integrated booster cushion is approved for children weighing between 15 and 36 kg.

**WARNING**

Never place a child in a child seat or on a booster cushion in the front seat if the airbag (SRS) is activated.

No one shorter than 140 cm should sit in the front passenger seat if the airbag (SRS) is activated.1

Failure to follow the advice given above can endanger the life of the child.

1For information on activated/deactivated airbag (SRS) see page 16.

Raising the booster cushion

- Pull that handle to raise the booster cushion (1).
- Grasp the cushion with both hands and push it backwards (2).
- Push until it locks in place (3).

**WARNING**

The booster cushion must be in the locked position before the child is placed there.

Check that:

- the seatbelt is locked
- the seatbelt is in contact with the child's body and is not slack or twisted, and that...
Child safety

the seatbelt is positioned correctly across the shoulder.
• the lap belt is low over the pelvis for optimum protection.
• the seatbelt does not lie across the child’s throat or below the shoulder.
• Carefully adjust the position of the head restraint to suit the child.

WARNING
Repair or replacement should only be performed by an authorised Volvo workshop. Do not make any modifications or additions to the booster cushion.
If an integrated booster cushion has been subjected to a major load, such as in conjunction with a collision, the entire booster cushion must be replaced. Even if the booster cushion appears to be undamaged, it may not afford the same level of protection. The booster cushion must also be replaced if it is heavily worn.

Lowering the booster cushion

1. Pull the handle (1).
2. Lower the seat and press until it locks (2).

NOTE
Remember to stow away the booster cushion before lowering the rear seat backrest.

ISOFIX fixture system for child seats (option)

Mounting points for the ISOFIX fixture system are concealed behind the lower section of the rear seat backrest, in the outer seats.
The location of the mounting points is indicated by symbols in the backrest upholstery (see illustration above). Press the seat cushion down to access the mounting points.
Always follow the manufacturer’s installation instructions when connecting a child seat to the ISOFIX mounting points.
Mounting points for child seat

The car is equipped with mounting points for child seats. These mounting points are located on the rear of the rear seats.

NOTE
These mounting points are only on the second row of seats in cars seating seven.

Fold the backrest forward to access the mounting points. For detailed information on how to secure the child seat in the upper mounting points, refer to the instructions from the seat manufacturer.

Extra locking function in seatbelt (ALR/ELR)\(^1\)

The seatbelt in the centre of the second row of seats has an extra locking function (ALR/ELR) to help hold the belt taut in order to facilitate child seat installation.

When installing a child seat with the help of the seatbelt:

- Secure the seatbelt in the child seat following the instructions of the child seat manufacturer.
- Pull out the entire seatbelt.
- Lock the seatbelt by inserting the locking tab in the buckle. A loud “click” indicates that the seatbelt is locked.
- Allow the seatbelt mechanism to retract the seatbelt while stretching it around the child seat. A mechanical sound will be audible from the seatbelt. This is normal.

This function is automatically deactivated when the seatbelt is released from the buckle and retracts back to its starting position.

If there are any problems with installation of child safety products, contact the manufacturer for clearer installation instructions.

\(^1\) Automatic Locking Retractor / Emergency Locking Retractor.

Driver's door control panel

Control panel

1. Lock button, for all doors
2. Blocking power windows in the rear doors
3. Power window controls
4. Door mirror control
1. Temperature gauge – Displays the temperature of the engine cooling system. A message will appear on the display if the gauge goes into the red zone. Bear in mind that extra lights placed in front of the air intake reduce the cooling capacity of the system.

2. Display – The display shows information and warning messages.

3. Speedometer – Shows the speed of the car.

4. Trip meters T1 and T2 – Used for measuring short distances. The right-hand digit displays tenths of a kilometre. Press the button for more than 2 seconds to reset. Switch between trip meters with one quick press of the button.

5. Cruise control indicator.

6. Odometer – The odometer indicates the total distance the car has travelled.

7. Main beam indicator

8. Warning symbol – If a fault arises, the symbol illuminates and a message is shown in the display.

9. Tachometer – Indicates engine speed in thousands of revolutions per minute (rpm). Do not allow the tachometer gauge to enter the red zone.

10. Automatic gearbox indicator – The selected gearshift programme is displayed here.

11. Outside temperature gauge – When the temperature lies between +2 °C and –5 °C, a snowflake symbol illuminates in the display. This warns of slippery road surfaces. If the car has been stationary, the gauge may display a reading that is too high.

12. Knob for clock – Turn the knob to adjust the time.

13. Fuel gauge – When the lamp illuminates, approximately 8 litres of usable fuel remain in the tank.

14. Indicator and warning symbols

15. Direction indicators – left/right
02 Instruments and controls

Indicator and warning symbols

All indicator and warning symbols illuminate when the ignition key is turned to position II before starting. This is to check that the symbols are working. When the engine starts, all the symbols should go out except the handbrake symbol, which extinguishes when the handbrake is released.

If the engine does not start within five seconds, all symbols extinguish except the symbols for a fault in the car’s emissions system and for low oil pressure. Certain symbols may have no function, depending on the car’s specifications.

1 For certain engine variants, the symbol for low oil pressure is not used. Warnings are given via display text, see page 180.

Symbols in the centre of the instrument panel

These symbols are lit with a red or amber glow depending on the severity of the fault.

Yellow symbol

– Read the message in the display. Remedy!
The message text is cleared using the READ button, see page 45, or it disappears automatically after 2 minutes.

Red symbol

– Stop the car in a safe place. Do not drive the car further.
– Read the information on the display.
– Rectify the fault as instructed or contact an authorised Volvo workshop.
Symbol and message text are visible until the fault has been rectified.

NOTE

When the message text TIME FOR REGULAR SERVICE is shown, the symbol and message text are cleared using the READ button, or disappear automatically after 2 minutes.
**Indicator and warning symbols**

**Indicator symbols**

**ABS fault**
If this symbol illuminates, the system is not working. The car’s regular brake system continues to work, but without the ABS function.

- Stop the car in a safe place and turn off the engine.
- Restart the engine.
- Drive to an authorised Volvo workshop to have the ABS checked if the symbol remains lit.

**Fault in brake system**
If this symbol illuminates, the brake fluid level may be too low.

- Stop the car in a safe place and check the level in the brake fluid reservoir, see page 182.
- If the level in the reservoir is below MIN, the car should not be driven any further. Transport the car to an authorised Volvo workshop to have the brake system checked.

**Seatbelt reminder**
This symbol illuminates if someone in a front seat has not put on their belt or if someone in a rear seat has taken off their seatbelt.

**Low oil pressure**
If the lamp illuminates while driving, engine oil pressure is too low. Stop the engine immediately and check the oil level. Top up as necessary. If the lamp illuminates but the oil level is normal, contact an authorised Volvo workshop.

**Fault in car’s emissions system**
Drive to an authorised Volvo workshop to have the system checked.

**Airbags – SRS**
If this symbol remains on or illuminates while driving, it means a fault has been detected in the seatbelt buckle, SRS, SIPS, or IC system. Drive directly to an authorised Volvo workshop to have the system checked.

1 For certain engine variants, the symbol for low oil pressure is not used. Warnings are given via display text, see page 180.

---

**WARNING**
If the BRAKE and ABS symbols are illuminated at the same time, there is a risk that the rear end will skid during heavy braking.
02 Instruments and controls

Indicator and warning symbols

**Alternator not charging**
If this symbol illuminates while driving, there is a fault in the electrical system. Contact an authorised Volvo workshop.

**Engine preheater (diesel)**
This symbol is illuminated during engine preheating. Preheating occurs when the temperature is below –2 °C. The car can be started once the symbol extinguishes.

**Parking brake applied**
The symbol illuminates when the parking brake is depressed. Always depress the parking brake to the bottom position.

**Rear fog lamp**
This symbol is lit when the rear fog lamp is on.

**Indicator symbol for trailer**
This symbol flashes when the direction indicators are used and a trailer is coupled. If the symbol does not flash, one of the lamps on the trailer or the car is defective.

**Stability system STC or DSTC**
For information on the system's functions and symbols, see page 124.

**Reminder – doors not closed**
If one of the doors, the bonnet\(^1\) or the tailgate is not properly closed, the driver will be reminded of this.

**Low speed**
If the car moves at a speed less than approx. 7 km/h, the information symbol illuminates

| DRIVER DOOR OPEN, PASSENGER DOOR OPEN, LEFT REAR DOOR OPEN, BONNET OPEN or RIGHT REAR DOOR OPEN, is shown in the display. Stop the car safely as soon as possible and close the door or bonnet.

**High speed**
If the car is moving faster than approx. 7 km/h, the symbol illuminates

| and one of the texts indicated in the previous paragraph appears in the display.

**Tailgate reminder**
If the tailgate is open, TAILGATE OPEN will appear on the display.

\(^1\) Only cars with alarm.
When a warning or indicator symbol illuminates, it is supplemented by a message appearing on the display.

- Press the **READ** button (A).

02 Instruments and controls

Switches in the centre console

**Air conditioning in the rear of the passenger compartment (option)**
Press the button to activate the air conditioning in the rear of the passenger compartment. Rear passenger compartment air conditioning is deactivated when the ignition is completely switched off.

**Child safety locks in the rear doors (option)**
Activating or deactivating the electric child safety locks in the rear doors. The ignition key must be in position I or II. When the child safety locks are activated, the lamp in the button illuminates. A message is shown in the display when the child safety locks are activated or deactivated.

**Retractable power door mirrors (option)**
Used to fold in the door mirrors if they are folded out or to fold them out if they are folded in.

**NOTE**
The order of the buttons may vary.

Proceed as follows if a door mirror has been accidentally folded in or out:
- Manually adjust the appropriate door mirror to its normal position.
- Turn the ignition key to position II.
- Fold the door mirror inward and then outward using the button.

The door mirrors have now returned to their original fixed positions.
Parking assistance (option)
The system is always activated when the car is started. Press the button to deactivate/reactivate the parking assistance system. See also page 125.

Deactivation of the deadlocks¹ and detectors
Use this button when you wish to switch off the deadlock function (doors cannot be opened from the inside when locked). This button can also be used when deactivating the alarm system’s movement and tilt detectors². The lamp illuminates when these systems are shut down/deactivated.

Auxiliary lamps (accessory)
Use this button to switch the auxiliary lamps on with main beam or to switch them off.

Active Bi-Xenon Lights, ABL (option)
The ABL headlamps’ headlamp pattern follows the movements of the steering wheel during driving. The function is activated automatically when the car is started and can be deactivated/activated by pressing the button. The lamp in the button illuminates when the function is activated.

Shifting headlamp pattern for right/left-hand traffic
Hold the button depressed for at least 5 seconds. The car must be stationary when the headlamp pattern is shifted. The message DIPPED BEAM SETT. F. RIGHT TRAFFIC or DIPPED BEAM SETT. F. LEFT TRAFFIC is shown in the display. For more information and adapting headlamp pattern for halogen or Bi-Xenon headlamps, see page 144.

Electric socket, (standard)/Cigarette lighter (option)
The electric socket can be used for various 12 V accessories, e.g. mobile phone or a cooler box.

BLIS – Blind Spot Information System (option)
Press the button to deactivate or reactivate the function. See page 127 for further information.

The ignition key must be at least in position I so that the socket can supply power.
The cigarette lighter is activated by pushing in the button. Once the lighter has been heated, the button pops out again. Pull out the lighter to use it. For safety reasons, always keep the cover in place when the socket is not in use. Maximum current tap 10 A.

WARNING
Always leave the plug in the socket when the socket is not in use.

¹ Certain markets
² Option
Switches in the centre console

Hazard warning flashers
Use the hazard warning flashers (all direction indicators flash) when the car is stopped where it could be a traffic hazard or obstruction. Press the button to activate the function.

NOTE
Regulations regarding the use of hazard warning flashers vary from country to country.

Rear window and door mirror defrosters
Use the defroster to remove ice and misting from the rear window and door mirrors. Press the switch to start defrosting the rear window and door mirrors. The lamp in the switch illuminates. Defrosting is automatically disconnected after about 12 minutes.

Heated front seats
See page 70 or page 72 for further information.
Headlamp levelling
The load in the car changes the vertical alignment of the headlamp beam, which could dazzle oncoming motorists. Avoid this by adjusting the height of the beam.
– Turn the ignition key to position II.
– Turn the headlamp control (1) to one of the end positions.
– Roll the control (3) up or down respectively to raise or lower beam alignment.
Cars with Bi-Xenon headlamps\(^1\) have automatic headlamp levelling, so there is no control (3).

Position/parking lamps
Position/parking lamps can be switched on irrespective of ignition key position.
– Turn the headlamp control (2) to the centre position.

When the ignition key is in position II the position/parking lamps and number plate lighting are always on.

Headlamps

Automatic dipped beam (certain countries)
Dipped beam comes on automatically when the ignition key is turned to position II, except when the headlamp control (1) is in the centre position. If necessary, the automatic dipped beam can be deactivated by an authorised Volvo workshop.

Automatic dipped beam, main beam
– Turn the ignition key to position II.
– Dipped beam is activated by means of turning the headlamp control (1) clockwise to the end position.
– Main beam is activated by means of moving the left-hand stalk switch towards the steering wheel to the end position and releasing it, see page 51

The lamps are switched off automatically when the ignition key is turned to position I or 0.

\(^{1}\) Option.

02 Instruments and controls

Lighting panel

Active Bi-Xenon Lights, ABL (option)

The ABL headlamps’ headlamp pattern follows the movements of the steering wheel during driving. The function is activated automatically when the car is started and can be deactivated/activated using the button in the centre console, see page 47.

Fog lamp

- **NOTE**
  Regulations for use of fog lamps vary from country to country.

**Front fog lamps (option)**
The front fog lamps can be switched on along with the headlamps or the position lamps/parking lamps.
- Press the button (2).
The light in the button (2) illuminates when the front fog lamps are switched on.

**Rear fog lamp**
The rear fog lamp can only be switched on with the headlamps or the front fog lamps.
- Press the button (4).
The rear fog lamp indicator symbol on the combined instrument panel and the light in the button (4) illuminate when the rear fog lamp is switched on.

Instrument lighting

The instrument lighting is switched on when the ignition key is in position II and the headlamp control (1) is in one of the end positions. The lighting is automatically dimmed during the day and can be controlled manually at night.

Roll the control up or down (5) for brighter or dimmer lighting.

Regulations for use of fog lamps vary from country to country.
02 Instruments and controls

**Stalk switch positions**

1. Short flash sequence, direction indicators
2. Continuous flash sequence, direction indicators
3. Main beam flash
4. Switching, main and dipped beam, and home safe lighting

**Direction indicators**

**Continuous flash sequence**
- Move the stalk switch up or down to end position (2).
  
The stalk switch remains in its end position and is moved back manually, or automatically by steering wheel movement.

**Short flash sequence**
- Move the stalk switch up or down to position (1) and release, the stalk switch then returns to its home position, or move the stalk switch to position (2) and move it directly back to the home position.
  
The direction indicators flash three times. Short flash sequence interrupted immediately if indicating is started in the opposite direction.

**Switching, main and dipped beam**

**Main beam flash**
- Move the stalk switch gently towards the steering wheel to position (3).
  
Main beam comes on until the stalk switch is released.

**Home safe lighting**

Some exterior lights can be kept lit and serve as home safe lighting after the car is locked. The standard delay is 30 seconds\(^1\), but can be changed to 60 or 90 seconds.

- Remove the key from the ignition switch.
- Move the stalk switch towards the steering wheel to the end position (4) and release.
- Get out of the car and lock the door.

\(^1\) Factory settings.
02 Instruments and controls

Trip computer

Controls
To scroll through trip computer information, turn the thumbwheel (B) in steps, either upward or downward. Continue turning to return to the starting point.

Functions
The trip computer displays the following information:

- AVERAGE SPEED
- ACTUAL SPEED MPH
- INSTANTANEOUS
- AVERAGE
- KILOMETRES TO EMPTY TANK
- DSTC, see page 124

Average speed
When the ignition is switched off, the average speed is stored and used as the basis of the new value when you continue driving. Reset using the RESET button (C).

Actual speed mph
Current speed is displayed in mph if the speedometer is graduated in km/h. If it is graduated in mph then the current speed is shown in mph.

Instantaneous
Current fuel consumption is calculated every second. The information on the display is updated every couple of seconds. When the car is stationary, "----" appears on the display. During the period for regeneration fuel consumption may increase, see page 114.

Average
The average fuel consumption since the last reset. Reset using RESET.

NOTE
There may be a slight error in the reading if a fuel-driven parking heater (option/accessory) has been used.

Kilometres to empty tank
The calculation is based on the average fuel consumption over the last 30 km and the remaining driveable fuel quantity. The display shows the approximate distance that can be driven with the fuel quantity remaining in the tank. When fuel for less than 20 km remains then the display shows "----".

NOTE
There may be a slight error in the reading if a fuel-driven parking heater (option/accessory) has been used or if driving style has been changed.

Resetting
- Select AVERAGE SPEED or AVERAGE
- Press and hold the RESET button (C) for at least five seconds to reset the average speed and average consumption at the same time.

NOTE
If a warning message interrupts while you are using the trip computer, this message must be acknowledged. Acknowledge by pressing the READ button (A) and revert to the trip computer function.

NOTE
If a fuel-driven parking heater (option/accessory) has been used or if driving style has been changed.

1 Certain countries.
2 Only applies to diesel cars with particle filter.
**Windscreen wipers**

*Windscreen wipers off*

Position 0: The windscreen wipers are off when the stalk switch is in position 0.

*Single sweep*

Raise the stalk switch to make a single sweep.

*Interruption of wiping*

You can set a suitable delay between the sweeps. Turn the thumbwheel (1) up for a shorter interval between sweeps. Turn it down to increase the delay.

**Continuous wiping**

- The wipers sweep at normal speed.
- The wipers sweep at high speed.

**Important**

Use plenty of washer fluid when the wipers are cleaning the windscreen. The windscreen must be wet when the windscreen wipers are operating.

**Windscreen/Headlamp washers**

Pull the stalk switch towards the steering wheel to start the windscreen and headlamp washers. The wipers will make several more sweeps once the stalk switch is released.

**High-pressure headlamp washing**

*(Option in certain markets)*

High-pressure headlamp washing consumes a large quantity of washer fluid. To save fluid, the headlamps are only washed every fifth wash cycle (within a ten minute period). When 10 minutes have elapsed following the latest windscreen washing, the headlamps are again washed with high-pressure with the first windscreen washing. Turn the stalk switch toward the steering wheel to wash the windscreen only.

**Reduced washing**

If only approx. one litre of washer fluid remains in the reservoir, the supply to the headlamps and rear window is cut off in order to prioritise cleaning of the windscreen.
Right-hand stalk switch

Wiper and washer, rear window

Press the stalk switch forward to initiate rear window washing and wiping. The wiper blade makes several sweeps once washing has finished. The control at the end of the stalk has three positions:

- **A** - Intermittent wiping: Depress the top of the button.
- **0** - Neutral position: Function deactivated.
- **B** - Constant speed: Depress the bottom of the button.

**Wiper – reversing**

Engaging reverse gear while the windscreen wipers are on initiates intermittent rear window wiping\(^1\). If the rear window wiper is already on at normal speed, no change is made.

**Rain sensor (option)**

The rain sensor automatically activates the windscreen wipers based on how much water it detects on the windscreen. The sensitivity of the rain sensor can be adjusted using the thumbwheel (1), see the illustration page 53.

**Thumbwheel**

Use the thumbwheel to adjust the frequency of wiper sweeps when intermittent wiping is selected, or the sensitivity to rain when the rain sensor is selected.

- Turn the thumbwheel upwards for higher sensitivity and downwards for lower sensitivity. (An extra sweep is made when the thumbwheel is turned upwards.)

**On/Off**

When activating the rain sensor, the ignition key must be in position **I** or **II** and the windscreen wiper stalk switch must be in position **0** (not activated).

To activate the rain sensor:

- Press the button (B). A light in the button illuminates to indicate that the rain sensor is active.

To turn the rain sensor off, either:

- Press the button (2).
- Press the stalk switch downward to another wiper programme. If the stalk switch is raised, the rain sensor will remain active, the wipers make an extra sweep and then return to rain sensor mode when the stalk switch is released back to position **0**.

The rain sensor is automatically deactivated when the key is removed from the ignition switch or five minutes after the ignition is switched off.

**IMPORTANT**

In an automatic car wash: Turn off the rain sensor by pressing the button (B) while the ignition key is in position **I** or **II**. Otherwise, the windscreen wipers may start and be damaged.

\(^1\) This function (intermittent wiping when reversing) can be deactivated. Contact an authorised Volvo workshop.
02 Instruments and controls

Cruise control (option)

Activating

The controls for cruise control are to the left of the steering wheel.

Setting the desired speed:

– Press the CRUISE button. CRUISE is shown on the combined instrument panel.
– Touch + or − to lock the vehicle speed. CRUISE-ON is shown.

Cruise control cannot be engaged at speeds below 30 km/h or above 200 km/h.

Increasing or decreasing speed

– Increase or decrease the locked speed by pressing and holding + or −. The speed of the car when the button is released is set as the new speed.

Pressing (less than half a second) + or − changes the speed 1 km/h or 1.6 km/h.

NOTE

A temporary increase in speed (less than one minute) using the accelerator, such as while overtaking, does not affect the cruise control setting. When you release the accelerator, the car will return to the programmed speed.

Temporary disengagement

– Press 0 to disengage the cruise control temporarily. CRUISE will be shown on the combined instrument panel. The speed set earlier is stored in the memory.

The cruise control is also temporarily disengaged when:

• the brake pedal or clutch pedal is depressed
• speed falls below 25–30 km/h when travelling uphill
• the gear selector is moved to position N
• wheel spin or wheel lock-up occurs.
• a temporary increase in speed lasts longer than one minute.

Return to the set speed

– Press this button to resume the previously set speed. CRUISE-ON appears on the combined instrument panel.

Disengaging

– Press CRUISE to disengage the cruise control. CRUISE-ON goes out on the combined instrument panel.
Parking brake, electrical socket, etc.

Parking brake

The parking brake is at floor level, see illustration, and acts on the rear wheels when depressed.

**NOTE**
The warning symbol in the combined instrument panel illuminates irrespective of how hard the parking brake pedal is depressed.

**How to apply the parking brake**
- Press the foot brake down firmly.
- Depress the parking brake pedal (1) firmly as far as possible.
- Release the foot brake and make sure that the car is stationary.
- If the vehicle rolls, the parking brake pedal must be depressed further.
- When parking a vehicle select position 1 (for manual transmission) or P (for automatic transmission).

**Parking on a hill**
If the car is parked facing uphill; turn the wheels away from the kerb.
If the car is parked facing downhill, turn the wheels towards the kerb.

**How to release the parking brake**
- Press the foot brake down firmly.
- Pull the handle (2).

Electrical socket in rear seat

The electrical socket can be used for accessories, such as a mobile phone charger or a cooler, and it is designed for 12 V. The maximum current is 10 A. For the socket to supply current, the ignition key must be in at least position I.
Steering wheel adjustment

The steering wheel can be adjusted both vertically and front-rear. Press down the control on the left-hand side of the steering column. Then adjust the steering wheel to the position that suits you best. Press the control back into place to lock the steering wheel. If this is difficult, press the steering wheel slightly while pressing the control back.

WARNING
Adjust the steering wheel before driving, never while driving. Ensure that the steering wheel is locked.

Opening the tailgate

Open the tailgate by pulling the handle indicated in the illustration. Fold down the rear flap by lifting the handle up.
02 Instruments and controls

Power windows

Operating
The power windows are operated using the controls in the doors. The ignition key must be in position I and II for the power windows to operate. The windows continue to work when the car has stopped and ignition key has been removed, provided none of the doors is opened. Operate the windows with caution.

To open a window:
- Depress the front of the control.

To close a window:
- Raise the front of the control.

Driver’s door
The driver can operate both power windows from the driver’s seat. The windows can be opened and closed in two ways:
- Press the control (A) slightly down or pull it slightly up. The power windows go up or down as long as the switch is actuated.
- Press the control (A) all the way down or pull it all the way up, and then release. The windows then open or close automatically. If the window is obstructed by an object, the movement will stop.

WARNING
If there are children in the car:
- Remember to switch off the supply to the power windows by removing the ignition key if the driver leaves the car.
- Make sure that children or other passengers are not in danger of becoming trapped in any way when closing the windows.
- If the rear door windows are operated from the driver’s door:
  - Check that none of the rear seat passengers are in danger of getting their hands caught when closing the windows.

NOTE
The function auto up for the passenger side is only available in certain markets.

Blocking power windows in the rear doors
Controls (B) to operate windows in the rear doors.

The power windows in the rear seat can be blocked with the switch on the driver’s door control panel. Always remember to switch off current to the power windows (i.e. remove the ignition key) if you leave children in the car unattended.

The light in the switch is illuminated
The rear door windows can only be operated from the driver’s door.

The light in the switch is extinguished
The rear door windows can be operated both with the controls on each rear door and with the controls on the driver’s door.
Front passenger seat

The control for the power window at the front passenger seat operates that window only.

Rear power windows

The rear door windows can be operated with the controls on the doors and the switch on the driver’s door. If the light in the switch for blocking power windows in the rear doors (located in the driver’s door control panel) is illuminated, the rear door windows can only be operated from the driver’s door.

**WARNING**

If the rear door windows are operated from the driver’s door, check that none of the rear seat passengers are in danger of becoming trapped in any way when they are closed.
Rearview and door mirrors

**Interior rearview mirror**

The illustration is a montage. The mirror has either manual dipping or automatic dimming, never both at the same time.

Bright light from behind could be reflected in the rearview mirror and dazzle the driver. Use dimming when disturbed by light from behind.

**Dimming**

A: Normal position  
B: Dimmed position.

**Automatic dimming (option)**

Bright light from behind is automatically dimmed by the rearview mirror.

**Rearview mirror with compass (option in certain markets)**

The upper left-hand corner of the rearview mirror has an integrated display that shows the compass direction in which the front of the car is pointing. Eight different directions are shown with English abbreviations: N (north), NE (north east), E (east), SE (south east), S (south), SW (south west), W (west) and NW (north west).

If the compass is activated then it starts automatically in ignition position II or when the engine is running. Switch the compass on or off by pressing the button set into the rear of the mirror. Use a straightened paper clip for example. The button is countersunk approximately 2.5 centimetres in the mirror.

**Correct zone on compass**

The earth is divided into 15 magnetic zones. The compass is set for the geographical area to which the car was delivered. The compass should be calibrated if the car is moved across several magnetic zones.

- Ignition position II.
- Press and hold the button on the rear of the mirror for approximately 3 seconds until ZONE is shown (use a straightened paper clip for example). The number for the current area is shown.
- Press the button several times until the number for the required geographic area (1–15) is shown. After several seconds the display returns to show the compass direction, this means that the change of zone is complete.
Rearview and door mirrors

**Calibration**

The compass may need calibrating to display correctly. For best results, switch off all major power consumers such as interior lighting, ventilation fan, heated rear window etc. and avoid having metal objects and magnetic objects close to the mirror.

- Stop the car in a wide open area with the engine running.
- Press and hold the button on the rear of the mirror (use a paper clip for example) until CAL is shown (approx. 6 seconds).
- Drive slowly in a circle at a speed of no more than 8 km/h until CAL disappears from the display, which is when calibration is complete.
- Alternative calibration method: drive off as usual. CAL disappears from the display when calibration is complete.
Door mirrors

The controls for adjusting the two door mirrors are at the front of the driver’s door armrest. The rearview mirrors can be operated in ignition position 1 and 2.
- Press the L button for the left-hand door mirror or R for the right-hand door mirror. The light in the button illuminates.
- Adjust the position with the joystick in the centre.
- Press the L or R button again. The lamp goes out.

Folding in the door mirrors, see page 46.

Door mirrors with memory function (option)

If the car has door mirrors with memory function, they work together with the memory setting of the seat, see page 79.

Memory function in the remote control (option)

When you unlock the car with one of the remote controls and change the setting of the door mirrors, these new settings are saved in the remote control. The next time you unlock the car with the same remote control and open the driver’s door within five minutes, the mirrors will assume their stored positions.

Laminated side windows (option)

The laminated windows in the front and rear doors improve sound insulation in the passenger compartment and provide better protection against unauthorised entry.

Water and dirt-repellent coating on the front windows and/or door mirrors (option)

The door mirrors are treated with a coating that maintains good rear-view vision despite the rain.

Side windows and mirrors treated with the water and dirt-repellent coating are marked with a small symbol.

Defrost the door mirrors:
- If they are covered with ice or snow.
- In heavy rain and dirty road conditions.
- If they are misted.

IMPORTANT

Do not use a metal ice scraper to remove ice from the windows. The water and dirt-repellent coating could be damaged. Use the defroster to remove ice from the mirrors!
Open positions

The sunroof controls are located in the roof panel. The sunroof can be opened to two positions:
A. Ventilation position, up at the rear edge
B. Sliding position, backwards/forwards
The ignition key must be in position I or II.

1. Closing, automatic
2. Closing, manual
3. Opening, manual
4. Opening, automatic
5. Opening, ventilation position
6. Closing, ventilation position

Ventilation position
To open:
– Press the rear edge of the control (5) upward.
To close:
– Pull the rear edge of the control (6) downward.

Switch from ventilation position to comfort position; pull the control rearwards to its end position (4) and release.

Automatic operation
Move the control over the resistance point position (3) to the rearmost end position (4) or over the resistance point position (2) to the front end position (1) and release. The sunroof will open to the comfort position or will close completely.
In order to open from comfort position to maximum opening:
– Pull the control to the rear once more to the end position (4) and release.

Manual operation
To open:
– Pull the control rearward to the point of resistance (3). The sunroof moves toward the fully open position as long as the button is held in this position.
To close:
– Press the control forward to the point of resistance (2). The sunroof moves toward the closed position as long as the button is held in this position.

WARNING
If there are children in the car:
Switch off the supply to the power sunroof by removing the ignition key if the driver leaves the car.

WARNING
The sunroof’s pinch-protection function only operates during automatic closing, not manual.
Sunscreen

The sunroof features a manual, sliding interior sunscreen. The sunscreen slides back automatically when the sunroof is opened. Grip the handle and slide the screen forwards to close it.

**Pinch protection**

The sunroof’s pinch protection function is activated if the hatch is blocked by an object. If blocked, the sunroof will stop and automatically open to the previous position.

**WARNING**

The sunroof’s pinch protection function only operates during automatic closing, not during manual closing. Make sure that nobody is in danger of becoming trapped in any way when closing the sunroof.
General information on climate control

Air conditioning
The climate control system cools or heats, and dehumidifies the air entering the passenger compartment. The car is equipped with electronic climate control (ECC).

NOTE
The air conditioning can be switched off, but to ensure the best possible air in the passenger compartment and prevent the windows from misting, it should always be on.

Misting windows
Reduce the problem of windows misting up on the inside by cleaning the windows. Use a regular window cleaner.

Particle filter
Make sure that the multifilter/particle filter is replaced regularly. Consult an authorised Volvo workshop.

Ice and snow
Remove ice and snow from the climate control system air intake (the grille between the bonnet and the windscreen).

Fault tracing and repair
Entrust fault tracing and repair of the climate control system to an authorised Volvo workshop only.

Refrigerant
The air conditioning system contains R134a refrigerant. This refrigerant contains no chlorine, which means that it is harmless to the ozone layer. The system must only be charged with R134a refrigerant. Have an authorised Volvo workshop carry out this work.

Ventilation fan function
When the engine is off (and if the ignition key is in position I or II), the ventilation fan is automatically switched off. This is to prevent the battery from becoming discharged.
To activate the ventilation fan, turn the fan control and set the desired speed.

ECC (electronic climate control)
Actual temperature
The temperature you select corresponds to the physical experience with reference to factors such as air speed, humidity and solar radiation in and around the car.

Sensor location
• The sun sensor is on the top side of the dashboard.
• The temperature sensor for the passenger compartment is behind the climate control panel.

NOTE
Do not cover or block the sensors with clothing or other objects.

Side windows and sunroof
To ensure that the air conditioning works satisfactorily, the side windows, and sunroof if appropriate, should be closed.

Acceleration
The air conditioning system switches off temporarily at full acceleration. You may feel a temporary rise in temperature.

Condensation
In warm weather, condensation from the air conditioning system may drip under the car. This is normal.

Fuel economy
With ECC, the air conditioning system is controlled automatically and is used just enough to cool the passenger compartment and to adequately dehumidify the incoming air. This provides better fuel economy compared to conventional systems where the air conditioning cools the air to just above freezing point.
Incoming air is distributed through several different vents located throughout the car.

### Air distribution

Panel vents in the dashboard

- **A**: Open
- **B**: Closed
- **C**: Lateral airflow
- **D**: Vertical airflow.
  - Aim the outer vents towards the side windows to remove misting from the front side windows.
  - In cold climates: close the centre vents for the most comfortable climate and best demisting.

Panel vents in the door pillar

- **A**: Open
- **B**: Closed
- **C**: Lateral airflow
- **D**: Vertical airflow.
  - Aim the outer vents toward the rear side windows to remove misting.
  - Aim the vents inwards for a comfortable climate in the rear seat.

Bear in mind that small children can be sensitive to airflow and draughts. The timer function is activated each time you press the button.
03 Climate control

Electronic Climate Control, ECC

Control panel

1. AC – On/Off
2. Recirculation/Multifilter with sensor
3. Recirculation
4. AUTO
5. Air distribution
6. Passenger compartment temperature sensor
7. Defroster, windscreen and side windows
8. Rear window and door mirror defroster
9. Heated front seats
10. Temperature, right-hand side
11. Temperature, left-hand side
12. Fan
13. Fan, rear passenger compartment (option in cars seating seven)

Functions
1. AC – ON/OFF
   ON: The air conditioning is on. It is controlled by the system’s AUTO function. This way, incoming air is cooled and dehumidified.
   OFF: Off. When the defroster function is activated the air conditioning is automatically switched on (can be switched off with the A/C button).

2. Air quality system, recirculation/multifilter (option certain markets)
   Certain cars are equipped with a "Multifilter" and air quality sensor. The Multifilter separates gases and particles, thus reducing the volume of odours and pollutants. The air quality sensor detects increased levels of contaminants in the outside air. When the air quality sensor detects contaminated outside air, the air intake is closed and the air in the passenger compartment is recirculated. The Multifilter also cleans the air recirculating in the passenger compartment.
When the air quality sensor is active, the green AUT lamp illuminates.

Operation:
- Press \( \text{AUTO} \) to activate the air quality sensor (normal setting).
- Select one of the following three functions by repeatedly pressing \( \text{AUTO} \):
  - The lamp for MAN illuminates. Recirculation is now activated.
  - No lamp illuminates. Recirculation is not activated unless needed to cool in a warm climate.
  - The lamp for AUT illuminates. The air quality sensor is now activated.

Keep the following in mind:
- Make it a rule to have the air quality sensor activated at all times.
- Recirculation is limited in cold weather to avoid misting.
- If misting occurs, you should deactivate the air quality sensor.
- If misting occurs, you can use the defroster functions for the windscreen, side windows and rear window.
- Follow the Volvo service programme for the recommended replacement interval of the Multifilter. If the car is used in environments where more contaminants are present, it may be necessary to change the Multifilter more often.

3. Recirculation
Recirculation can be used to shut out bad air, exhaust, etc. from the passenger compartment. The air in the passenger compartment is then recirculated, i.e. no air from outside the car is taken into the car when this function is activated.

If you allow the air in the car to recirculate, there is a risk of icing and misting, especially in winter.

The timer function (cars with Multifilter and air quality sensor have no timer function)

- Press \( \text{AUTO} \) for more than 3 seconds. The lamp flashes for 5 seconds. The air recirculates in the car for 3–12 minutes depending on the outside temperature.
- The timer function is activated each time you press \( \text{AUTO} \). To switch off the timer function:
  - Press \( \text{AUTO} \) again for more than 3 seconds. The lamp illuminates for 5 seconds to confirm your selection.

4. AUTO
The AUTO function automatically regulates climate control so that the selected temperature is attained. The automatic function controls heating, air conditioning, air quality sensor, fan speed, recirculation and air distribution. When one or more functions are selected manually, the other functions continue operating automatically. All manual settings are switched off when AUTO is pressed.

5. Air distribution
- When the top button is depressed, air is directed to the windows.
- When the centre button is depressed, air is directed to the head and body.
- When the lower button is depressed, air is directed to the legs and feet.

Press AUTO to return to automatic air distribution.
6. Passenger compartment temperature sensor
The passenger compartment temperature sensor monitors the temperature inside the car.

7. Defroster, windscreen and side windows
Used to quickly remove misting and ice from the windscreen and side windows. Air flows to the windows with high fan speed. The lamp in the defroster button illuminates when this function is engaged.

When the function is selected the following also takes place to provide maximum dehumidification of the air in the passenger compartment:
- the air conditioning (AC) is automatically engaged (can be switched off with the A/C button).
- recirculation is automatically disengaged.

When the defroster function is switched off the climate control system returns to the previous settings.

8. Rear window and door mirror defrosters
Use this button to quickly remove misting and ice from the rear window and door mirrors, see page 48 for further information about this function.

9. Heated front seats
To activate front seat heating:
- Higher heat: Press the button once – both lights illuminate.
- Lower heat: Press the button twice, one – light illuminates.
Heat off: Press the button three times – light not illuminated.
An authorised Volvo workshop can adjust the temperature.

10 and 11. Temperature selector
The two knobs can be used to set the temperature for the passenger and driver’s sides of the car.

12. Fan
Increase or decrease fan speed by turning the knob. The fan speed is regulated automatically if AUTO is selected, and the previously set fan speed is disengaged.

13. Fan, rear passenger compartment (option in cars seating seven)
Fan speed can be increased or decreased by turning the knob. This only applies if AC is selected for both front (1) and rear passenger compartment. The button for rear passenger compartment is in the centre console switch panel, see page 46.

NOTE
Heating or cooling cannot be hastened by selecting a higher or lower temperature than the actual desired temperature.
General information about heaters

The electrical system must be "awakened" before the parking heater can be programmed. This is done by:
- pressing the READ button or
- activating main beam or
- turning on the ignition.

The parking heater can be started immediately or set with two different start times using TIMER 1 and TIMER 2. Here, start time refers to the time the car is heated and ready. The car’s electronic system calculates when heating should be started based on the outside temperature. The heater is not run if the outside temperature exceeds 25 °C. At –10 °C and below, the maximum running time of the parking heater is 60 minutes.

If the parking heater does not start despite repeated attempts, a message is shown in the display. You are recommended to contact an authorised Volvo workshop.

Messages in the display

Once the settings for TIMER 1, TIMER 2 and Direct Start are activated, the amber warning symbol in the combined instrument panel illuminates and explanatory text is shown in the display.

When you leave the car, you will receive a message regarding the current settings of the system. The message disappears when the car is locked from the outside using the remote control.

Parking on a hill

If you park your car on a steep incline, the front of the car should be facing down the slope to ensure the supply of fuel to the parking heater.

Clock/timer

If the car clock is reset after the heater timers are programmed, the selected times will be cancelled.

Setting the TIMER

For safety reasons, you can only programme times for the following 24 hours, not several days in advance.
- Scroll with the thumbwheel (B) until TIMER is shown on the display.

WARNING

The car must be outdoors when the parking heater is used.

Switch off the parking heater before refueling. Spilled fuel could be ignited.

Check in the display that the parking heater is off. (When the parking heater is running, PARK HEAT ON is shown in the display.)

WARNING/ACHTUNG/AVERTISSEMENT!
Fuel-driven heater (option)

- Briefly press RESET (C) so that the hours setting starts to flash.
- Scroll with the thumbwheel to the desired hour.
- Touch RESET to move to the flashing minutes setting.
- Scroll with the thumbwheel to the desired minute.
- Touch RESET to confirm the setting.
- Press RESET to activate the timer.

- Select ON. The heater will now run for 60 minutes. Heating of the passenger compartment will begin as soon as the engine coolant has reached a temperature of 30 °C.

Immediate stop of heater
- Scroll with the thumbwheel (B) until DIRECT START is shown on the display.
- Press RESET (C) to access the options ON and OFF.
- Select OFF.

Deactivating timer-started parking heater
Proceed as follows to manually switch off the parking heater before the set time has elapsed:
- Press the READ button (A).
- Use the ring (B) to toggle to PARK HEAT TIMER 1 or 2. The text ON flashes on the display.
- Press the RESET button (C). The text OFF is shown with a constant glow and the parking heater is switched off.

Direct start
- Scroll with the thumbwheel (B) until DIRECT START is shown on the display.
- Press RESET (C) to access the options ON and OFF.

Battery and fuel
If the battery has insufficient charge or the fuel level is too low, the parking heater will be switched off automatically. A message appears on the display. Acknowledge the message by pressing READ (A) once.

NOTE
The car can be started and driven while the parking heater is still running.

IMPORTANT
Repeated use of the parking heater combined with short journeys may discharge the battery and impair starting. If the heater is used regularly, the car must be driven for the same time as the heater is used in order to ensure that the alternator has time to charge the battery.
Additional heater\(^1\) (diesel)

Extra heat from the additional heater may be required in cold weather to reach the correct temperature in the passenger compartment. The additional heater starts automatically when extra heat is required if the engine is running. It is switched off automatically when the correct temperature is reached or when the engine is switched off.

\(^1\)Certain countries
Front seats ........................................................................................................... 78
Interior lighting ................................................................................................... 80
Storage spaces in the passenger compartment ................................................. 82
Rear seat ............................................................................................................. 87
Cargo area ......................................................................................................... 89
INTERIOR
The driver's and passenger seats can be adjusted to the optimum sitting and driving positions:

1. Forward/backward: lift the handle to adjust the distance to the steering wheel and pedals. Check that the seat is locked after changing position.
2. Raise/lower the front of the seat cushion, pump up/down, (option on passenger side).
3. Raise/lower the seat, pump up/down, (option on passenger side).
4. Lumbar support\(^1\), turn the wheel.
5. Backrest rake: turn the wheel.
6. Control panel for power seat (option).

**WARNING**
Adjust the position of the driver’s seat before setting off, never while driving. Check that the seat is locked in position.

**Lowering the front seat backrest (option)**

The passenger seat backrest can be folded forward to make room for long loads:
- Move the seat as far back as possible.
- Adjust the backrest to an upright position 90 degrees.
- Lift the catches on the rear of the backrest while folding it forwards.
- Slide the seat forward so that the head restraint is "locked in place" under the glovebox.

**Floor mats (option)**
Volvo supplies floor mats especially produced for your car.

**WARNING**
The floor mat at the driver's seat must be firmly fitted and secured in the attachment clips to prevent it from being trapped around and under the pedals.

\(^1\) Also applies to power seat.
Power seat (option)

The seats can be adjusted for a certain time after unlocking the door with the remote control without the key being inserted into the ignition switch. The seat can always be set in ignition position I or II.

1. Front edge of seat cushion up/down
2. Seat forward/rearward
3. Seat up/down
4. Backrest rake

Overload protection is deployed if any seat is blocked. If this occurs, switch off the ignition and wait a short time before operating the seat again. Only one of the seat’s settings can be adjusted at a time.

Memory function

Store setting
- Adjust seat.
- Press and hold button MEM while pressing button 1, 2 or 3 at the same time.

Using a stored setting
Press one of the memory buttons 1 – 3 until the seat stops. If you release the button then the movement of the seat will stop.

Key memory in remote control key
The driver’s seat positions are stored in the key memory when the car has been locked with the remote control key. When the car is unlocked with the same remote control key the driver’s seat and rearview mirrors adopt the stored positions when the driver’s door is opened.

NOTE
The key memory is independent of the seat memory.

Emergency stop
If the seat accidentally begins to move, press any of the buttons to stop the function.

WARNING
Risk of crushing. Make sure that children do not play with the controls. Check that there are no objects in front of, behind or under the seat during adjustment. Ensure that none of the rear seat passengers can be trapped.
04 Interior

Interior lighting

Reading lamps and interior lighting

1. Reading lamp left-hand front
2. General interior lighting
3. Reading lamp right-hand front

Switch (2) has three positions for the interior lighting:
- The front reading lamps are switched on and off using button (1) or (3).
- The general interior lighting is switched on and off with a short press on button (2).

4. Reading lamp left-hand rear, On/Off
5. Reading lamp right-hand rear, On/Off

Automatic lighting

All reading lamps and general interior lighting are switched off automatically after 10 minutes from when the engine is switched off. Each type of lighting can be switched off manually before this.

The general interior lighting is switched on automatically¹ and remains on for 30 seconds when:
- the car is unlocked from the outside using the key or remote control
- the engine is switched off and the key is turned to the 0 position.

The general interior lighting is switched on and remains on for 10 minutes when:
- one of the doors is open if the general interior lighting is not switched off.

General lighting switches off:
- the engine is started
- when the car is locked from the outside using the key or remote control.

Automatic lighting can be disengaged by pressing and holding button (2) for more than 3 seconds. A short press on the button re-engages automatic lighting.

The programmed times, 30 seconds and 10 minutes, can be changed by a Volvo workshop.

¹ The function is light-dependent and is only activated when it is dark.
Vanity mirror

The light illuminates automatically when the cover is lifted.

1 Option in certain markets.
Storage spaces in the passenger compartment
Storage spaces
1. Storage compartment in third row of seats.
2. Storage compartment and cup holder.
3. Ticket clip.
5. Storage tray in centre console.
6. Cup holder for rear seat passengers.
7. Storage pocket (also on the front edge of the front seat cushions).
8. Grocery bag holder.

**WARNING**
Ensure that no hard, sharp or heavy objects lie or protrude in such a way that they could cause injury during heavy braking.
Always secure large and heavy objects with a seatbelt or cargo retaining straps.

Pen holder
The centre console contains a pen holder.

Glovebox
The glovebox can be used to store things such as the owner’s manual, maps, pens and petrol cards.
Storage spaces in the passenger compartment

**Coat hanger**

The coat hanger is only intended for light garments.

**Ashtray for rear seat passengers (option)**

Open the ashtray by pulling the top edge outward.
To empty:
- Open the ashtray.
- Press the cover outwards and tip it back.
- Then lift it out.

**Cup holder/bottle holder for rear seat passengers**

Pull the bottom edge of the insert to open. The cup holder insert can be removed: Detach the two clips so the holder can be used for large bottles.
Storage spaces in the passenger compartment

Storage compartment and cup holder (cars seating seven)
This storage compartment can be used for CDs, books and the like.

Storage tray in centre console
The centre console contains a storage tray for food and drinks, for example. The armrest can be folded back to make a "table" for rear seat passengers.
Under the storage tray is a storage compartment, e.g. for CD discs.

Cup holder
Cup holder for front seat passengers.

Ashtray (option)
– Pull out the insert to empty the ashtray.
Storage spaces in the passenger compartment

**Storage compartment in the third row of seats (cars seating seven)**

This storage compartment can be used for pens and other small items.

**Refrigerator compartment (option)**

Under front seat’s folding armrest there is a refrigerator. It is activated in key position II. The refrigerator holds approx. 14 litres and can cool down to approx. 5°C/41°F.

**WARNING**

Make sure that bottles are stored in the refrigerator while driving and that the door is firmly closed.

---

¹ Only applies to Executive models.
Rear seats – second row (cars seating seven)

Lowering the backrest for entry into the car
Lift the handle (1) up while pushing the seat forward. Do the reverse to return the seat to its original position.

Adjusting the seat front - rear
Lift the bracket (2) to move the seat forwards or backwards.

Sliding seat (cars seating seven)
The centre seat in the second row can be slid farther forward than the other seats. Sliding the seat completely forward improves contact between a child sitting on the integrated booster cushion and front seat occupants. Lift the bracket (A) to move the seat forwards or backwards.

Removing the rear section of the centre console
The centre console must first be removed if you wish to slide the centre seat in the second row forward.

- Remove the rear section of the centre console by pulling the catch straight out as illustrated above.
- Then lift the console out of the way.
Rear seat

Head restraint, rear seat – centre seat

The centre seat head restraint can be adjusted to four different heights. Slide the head restraint up as desired.

- Press in the release button to lower it. See illustration.

**WARNING**
The lowest position should only be used when the backrest is to be folded down or when no one is sitting in this seat.

After raising the backrests in the second and third row, it is important to make sure that the backrests have locked into position. Otherwise the protective system of the seats may be compromised.

**NOTE**
The head restraint cannot be removed completely.
Extending the cargo area – second row of seats

- Set the seats in their rearmost positions (applies only to cars seating seven).
- Lower the head restraint.
- Release the catch (1) and fold down the backrest. Press down to lock the backrest in its folded position.

**WARNING**
For reasons of safety, no passengers should sit in the third row of seats if the outer head restraints in the second row are lowered.

Extending the cargo area – third row of seats (cars seating seven)

- Push the second row of seats to its front position, see page 85.
- Lift the handle upward.
- Slide the seat cushion to its rearmost position. Fold in the right and left-hand cargo eyes in order to avoid damage when lowering the backrest.
- Fold down the backrest (The head restraint folds in automatically when the backrest is folded).

Repositioning the third row of seats

- Raise the backrest to its normal position.
- Take hold of the eyes and pull out the seat cushion until you hear a click.
- Raise the head restraint.
The seat is now ready for use.
Payload depends on the car’s total kerb weight, including any accessories that are mounted. Kerb weight includes the driver, the weight of the fuel tank when filled to 90% and various fluids, such as washer fluid and coolant. Mounted accessories, i.e. towbar, load carriers, space box, etc., are included in the kerb weight.

The load capacity of the car is reduced by the number of passengers and their weight.

Loading the cargo area
The seatbelts and airbags provide the driver and passengers substantial protection, especially in frontal collisions. However, you must also remember to protect yourself against injuries from behind. When loading cargo, bear in mind that improperly secured or incorrectly loaded objects in the cargo area could be thrown forward with great speed and force in the event of a collision or sudden braking, causing serious injuries.

Bear in mind that if an object weighing 20 kg is subjected to a head-on collision at a speed of 50 km/h, its impact weight will be 1000 kg.

Think about the following when loading:
• Do not load extremely heavy objects up by the front seats. The lowered backrest will be pressed down unnecessarily hard.
• Place the load by the backrest.
• Position heavy loads as low as possible.
• Position wide loads on each side of the division in the backrest.
• Cover sharp edges with something soft.
• Secure the load with retaining straps using the car’s lashing eyes.
• Never load above the backrest without a load net.

WARNING
Never load cargo above the backrests! If you do so, the load could be thrown forward in the event of sudden braking or a collision and severely injure you or your passengers. Remember to always secure (bind) the load properly.

If the rear seat backrest is lowered, do not load the car higher than 50 mm under the top edge of the rear passenger windows. Leave 10 cm of free space from the windows inwards. Otherwise, the intended protection of the inflatable curtain, which is hidden in the headlining, may be compromised.

Always secure the load. During heavy braking the load may otherwise shift, causing personal injury.

Turn off the engine and apply the parking brake when loading or unloading long objects! Otherwise you may accidentally knock the gear lever or gear selector with the load and cause a gear to engage and the car to move off.

The driving characteristics of the car change based on the car’s kerb weight and how heavily it is loaded.
Safety net

The safety net prevents luggage and cargo from being thrown forward in the passenger compartment during heavy braking.

The net is made of a strong nylon fabric and can be secured two different ways:

- Behind the rear seat backrest
- Behind the front seats if the rear seat is lowered.

Fitting the safety net

If the car is equipped with a cargo area cover, remove it before fitting the safety net.

- Hook the upper rod in the front or rear roof mounting.
- Hook the other end of the rod in the roof mounting on the other side.
- Secure the safety net anchoring straps in the eyes on the floor if the net is secured in the rear roof mountings.
- Use the eyes in the seat slide rail if the net is secured in the front roof mountings. Only applies to cars seating seven:
  - Make sure the net lies in front of the side panel armrest when securing.
- Tension the safety net using the anchoring straps.

Folding up the safety net

The safety net can be folded up and placed in the cargo area floor (for cars seating five).

Press the buttons (1) in the safety net hinges to release the hinges and fold up the net.

WARNING

Make sure that the upper mountings of the safety net are correctly fitted and that the anchoring straps are securely fastened.

Do not use a damaged net.
The protective grille in the cargo area prevents cargo or pets from being thrown forward in the passenger compartment in the event of heavy braking.

For reasons of safety, the protective grille must always be mounted and secured correctly.

Fit the protective grille as follows:
- Lift in the protective grille through the tailgate opening or one of the rear doorways (fold down the seats in the second row if necessary).
- Insert one of the protective grille mountings in its bracket above the rear door behind the second row of seats.
- Slide the protective grille mounting to the front position of the bracket.
- Place the other protective grille mounting in its bracket above the other rear door and slide it to the front position.
- Insert the attaching brace through the lower mounting in the protective grille from underneath, as indicated in the illustration.
- Fit the spring on the attaching brace and screw in the knob.
- Fit the hook from the attaching brace in the load securing eyelet and tighten the knob until the attaching brace takes hold in the load securing eyelet.
- Do the same on the other side.
- Tighten both attaching braces alternately.
- Fit protective caps on the exposed screw threads above the knobs.

**WARNING**

For cars seating seven: For reasons of safety, no passengers should sit in the third row of seats if the protective grille is positioned behind the second row of seats.
04 Interior

Cargo area

**Electric socket in the cargo area**
Slide down the cover when you wish to use the socket. It works regardless of whether the ignition is on or off.

If the ignition is switched off and a power consumer that uses more than 0.1 A is connected to the electric socket, a warning message is shown in the display.

**NOTE**
Do not use the electric socket with the ignition switched off as there is a risk of the battery becoming discharged.

**Cargo cover (option)**
Pull out the cargo area cover, pull it over the cargo and hook it into the holes in the rear pillars of the cargo area.

**Removing the cargo area cover**
Press the end pieces of the cargo area cover inwards, pull up and release. When fitting, press the end pieces of the cargo area cover down into the holders.

**Grocery bag holder**
Open the tailgate. Hang or secure your grocery bags using the tensioning straps or holders.

**WARNING**
Do not place objects on the cargo area cover. They could injure passengers during braking or evasive manoeuvres.
Cargo area

Cargo area compartment, contents

1. Cars seating five. Cars seating seven

The following is housed in the floor compartment:

- Warning triangle (certain markets)
- Tool kit
- First-aid kit (certain markets)
- Jack (alternative location)

Opening the compartment in the cargo area floor (cars seating five)
- Lift up the cover in the cargo area floor.
  If the car is equipped with a carrier bag holder:
  - Lift the cover, detach the tensioning straps to the grocery bag holder.

Opening the compartment in the cargo area floor (cars seating seven)
- Lift up the cover.
  If the car is equipped with a carrier bag holder:
  - Open the upper cover, detach the tensioning straps to the grocery bag holder, if fitted, and open the lower cover.

NOTE

Some components of the first-aid kit have an expiration date and should be replaced before this date.

IMPORTANT

Remember not to put anything in the area that the cushions fold into. The cushions and seat mechanisms could be damaged.
Keys and remote controls

1. Master key
   Key for all locks.

2. Service key
   Key to front door, ignition switch and steering wheel lock.

The car is delivered with two master keys and one service key. One of the master keys is collapsible and equipped with an integrated remote control.

If you lose one of your keys, you must take all other keys to an authorised Volvo workshop. As a crime prevention measure, the code of the lost key is erased from the system. At the same time, the other keys must be re-coded in the system.

The key blades’ unique code is available at authorised Volvo workshops, who can order new key blades.

A maximum of six remote controls/key blades can be programmed and used for one single car.

Immobiliser
The keys are equipped with coded chips. This code must match the reader in the ignition switch. The car can only be started if the correct key with the correct code is used.

**NOTE**
The master key blade (1) must be fully extended (as illustrated) when starting the car. Otherwise there is a risk that the immobiliser function will prevent the car from starting.

Ignition keys and electronic immobiliser
The ignition key must not hang with other keys or metal objects on the same key ring. The electronic immobiliser could be activated erroneously and the car will not start.

1 Option in certain markets
Remote control functions

1. Unlock
2. Open tailgate
3. Panic alarm function
4. Approach lighting
5. Locks
6. Folding/opening the key

Unlocking
– Press the button (1) once to unlock all doors, the tailgate and the fuel filler flap simultaneously.

Tailgate
– Press the button (2) once to unlock the tailgate only.

Panic alarm function
The panic alarm function can be used to attract attention in the event of an emergency. If the red button (3) is held depressed for at least three seconds or is pressed twice in a short period of time, the direction indicators and horn are triggered. The panic alarm is deactivated automatically after 25 seconds or by pressing any of the buttons on the remote control.

Approach lighting
Do the following when you approach the car:
– Press the yellow button (4) on the remote control.
The interior lighting, position/parking lamps, number plate lighting, door mirror lamps (option) will now switch on. The lighting on a coupled trailer will also switch on. These lamps remain lit for 30, 60 or 90 seconds. An authorised Volvo workshop can select a suitable time setting.

To extinguish the approach lighting:
– Press the yellow button again.

Locking
Lock all doors, tailgate and fuel filler flap with button (5). There is a delay of approx. 10 minutes for the fuel filler flap.

Folding/opening key
The key can be folded by pressing button (6) while folding the key blade into the keypad. The folding key will open automatically with one press of the button.
Replacing the remote control battery

Replace the battery after repeated failure by the locks to respond when remote control signals are transmitted within a normal distance.

- Remove the cover by carefully prising up the rear edge of with a small screwdriver.
- Replace the battery (type CR 2032, 3 V) – with the plus side facing up. Avoid touching the battery and its contact surfaces with your fingers.
- Refit the cover. Make sure the rubber seal is properly fitted and free from damage to prevent water from entering.

- Turn the old battery in to your Volvo workshop so that it is disposed of in an environmentally friendly way.
Locking/unlocking the car from outside

The master key or remote control locks/unlocks all side doors and the tailgate simultaneously. The side door lock buttons and inside handles are disengaged.

The fuel filler flap can be opened when the car is unlocked. The flap remains unlocked for 10 minutes after the car has been locked.

**NOTE**

The car can be locked even if a door or the tailgate is open. When the door is closed there is a risk that the keys will be locked in.

1 Applies to certain markets

**Automatic relocking**

If none of the doors or the tailgate is opened within two minutes of unlocking with the remote control then all are locked again automatically. This function prevents the car from being left unlocked unintentionally.

For cars with alarm, see page 106.

**Automatic locking**

Automatic locking is activated and deactivated from the control panel in the driver’s door. The function operates by locking the doors automatically when the speed of the car exceeds 7 km/h. They remain locked until a door is opened from the inside or when all doors are unlocked from the control panel.

**Activating/deactivating automatic locking**

The ignition key must be in position I or II.

Press the READ button in the left-hand stalk switch to acknowledge any messages on the display.

Press and hold the button for central locking until a new message for lock status is shown on the display.

The messages AUTOLOCK ACTIVATED (the car is also locked when it moves) and AUTOLOCK DEACTIVATED respectively are shown on the display.
05 Locks and alarm

### Locking and unlocking

#### Locking/unlocking from inside

All the doors and the tailgate can be locked or unlocked simultaneously using the control panel in the driver’s door (or passenger door).

All doors can be locked using the lock button on the control panel by each respective door.

If the car is not locked from the outside then it can be unlocked by opening the door with the handle.\(^1\)

#### Locking the glovebox

The glovebox can be locked/opened with the master key only – not with the service key.

#### Locking/unlocking the tailgate with the remote control

Unlocking the tailgate only:
- Press once on the button on the remote control as illustrated.
- If all doors are locked when you close the tailgate, it remains unlocked and its alarm is not armed after being closed. The other doors remain locked with their alarms armed.
- Press the LOCK button again to arm the alarm and lock the tailgate.

---

**NOTE**

If the LOCK button is used to unlock the tailgate without it being opened then it is relocked automatically after approx. 2 minutes.

---

\(^1\) Applies to certain markets
Deadlocks

The car has a special deadlock function, which means that the doors cannot be opened from the inside if they are locked. Deadlocks can only be activated from the outside by the driver’s door being locked with the key or remote control. All doors must be closed before deadlocks can be activated. Once activated, the doors cannot be opened from the inside. The car can only be unlocked from the outside via the driver’s door or by using the remote control. Deadlocks are engaged after a 25 second delay after the doors have been closed.

Temporary deactivation of the deadlocks and any alarm detectors

If others prefer to remain seated in the car with the doors locked from the outside, e.g. during transport by ferry, it is possible to deactivate the deadlocks.

– Insert the key into the ignition switch, turn it to position II and then back to position I or 0.
– Press the button (see illustration).

If the car is equipped with an alarm, movement and tilt detectors are also deactivated. See page 107.

The light in the button illuminates until the car is locked with the key or the remote control.

A message remains on the display as long as the key remains in the ignition switch. The detectors are reactivated and deadlocks re-engaged the next time the ignition is switched on.

WARNING

Do not allow anyone to remain in the car without first deactivating the deadlocks.

1 Certain countries
Child safety locks

Manual child safety locks, tailgate and rear doors

Control for child safety lock – tailgate.

The controls for the child safety locks are in the bottom edge of the tailgate\(^1\) and in the rear edge of the rear doors. The controls are only accessible when the tailgate is open or the rear doors are open.

– Adjust the tailgate control by sliding it sideways between the outer positions (use a flat metal object, such as a screwdriver):

<table>
<thead>
<tr>
<th>Position</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Child-safe position – the tailgate cannot be opened from inside.</td>
</tr>
<tr>
<td>B</td>
<td>Not child-safe position – the tailgate can be opened from inside.</td>
</tr>
</tbody>
</table>

– Adjust the control in the respective rear door by turning it between the outer positions (use a flat metal object, such as a screwdriver):

<table>
<thead>
<tr>
<th>Position</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Child-safe position – the rear doors cannot be opened from inside; turn outwards.</td>
</tr>
<tr>
<td>B</td>
<td>Not child-safe position – the rear doors can be opened from inside; turn inwards.</td>
</tr>
</tbody>
</table>

\(^1\) Certain markets only

WARNING

Always keep the lock buttons pulled up when driving. In the event of an accident, this allows the emergency services to get into the car quickly. Passengers in the rear seat cannot open the doors from inside if the child safety locks are activated.
Use the button in the centre console to activate/deactivate the child safety locks in the rear side doors.

- Turn the ignition key to ignition position I or II.
- Press the button.

When the light in the button illuminates, the rear power windows and rear doors are locked.

A message appears on the display, the child safety locks are activated/deactivated.

¹ Option in certain markets
Alarm (option)

Alarm system
When the alarm is armed, it continually monitors all alarm inputs.
The alarm is triggered if:
- a door, the bonnet or tailgate opens
- a non-approved key is used in the ignition or if an attempt is made to force the lock.
- a movement is detected in the passenger compartment (if fitted with a movement detector)
- the car is raised or towed away (if fitted with a tilt detector).
- a battery cable is disconnected.
- anyone tries to disconnect the siren.

Alarm lamp on instrument panel
A light on the instrument panel indicates the alarm system’s status:
- Lamp not lit – the alarm is deactivated.
- The lamp flashes once every other second after the car’s direction indicators have made one long flash signal – the alarm is armed.
- Lamp flashes quickly, after deactivating the alarm and until the ignition is switched on: The alarm has been triggered.
- If there is a fault in the alarm system, a message appears in the display.
- If there is a fault in the alarm system, a message appears on the display. Contact an authorised Volvo workshop.

NOTE
Do not attempt to repair or modify alarm system components. All such attempts can affect terms of insurance.

Arming the alarm
– Press the LOCK button. A long flash from the car’s direction indicators confirms that the alarm is armed and that all the doors are locked.

IMPORTANT
The alarm is fully armed when the car’s direction indicators have made one long flash and the light on the instrument panel flashes once every other second.

Disarming the alarm
– Press the remote control’s UNLOCK button. Two short flashes from the car’s direction indicators confirm that the alarm has been deactivated.

If the remote control batteries are discharged then the alarm can be disarmed by turning the key to ignition position II.
Automatic alarm activation
This function prevents you accidentally leaving the car without the alarm on. If none of the doors or the tailgate are opened within two minutes of disarming the alarm (and the car has been unlocked with the remote control), the alarm is automatically rearmed, and the car is locked at the same time.

Automatic alarm activation
In certain countries (e.g. Belgium, Israel) the alarm is activated after a certain delay if the driver’s door was opened and closed but the car was not re-locked.

Deactivating a triggered alarm
- Press the UNLOCK button on the remote control or insert the key in the ignition switch.

Confirmation is given by two short flashes from the direction indicators.

Alarm signals
When the alarm is triggered, the following happens:
- A siren sounds for no more than 25 seconds. The siren has its own battery which is used if the car battery has insufficient charge or is disconnected.
- All direction indicators flash for five minutes or until the alarm is deactivated.

Temporary deactivation of the deadlocks and alarm detectors
To prevent the alarm being triggered erroneously, such as with a dog in the car or during a ferry journey, the movement and tilt detectors can be disengaged.
- Insert the key in the ignition switch, turn it to position II and then back to position I or 0.
- Press the button.

The light remains illuminated until the car is locked using the key or remote control.

A message remains on the display as long as the key remains in the ignition switch. The temporary disengagement is deactivated when the ignition is switched on. If the car has deadlocks, then these are also re-engaged at the same time. See page 103.

06 Starting and driving

General

Economical driving
Driving economically means driving smoothly while thinking ahead and adjusting your driving style and speed to the prevailing conditions.
- Get the engine warmed up as soon as possible.
- Do not let the engine idle, but drive at light loads as soon as it is possible. A cold engine consumes more fuel than a warm one.
- Avoid sudden unnecessary acceleration and heavy braking.
- Do not drive with unnecessary loads in the car.
- Do not use winter tyres when the roads are dry.
- Remove the load carrier when it is not in use.
- Avoid driving with open windows.

Slippery driving conditions
Practise driving on slippery surfaces under controlled conditions to learn how the car reacts.

Engine and cooling system
Under special conditions, for example when driving in hilly terrain, extreme heat or with heavy loads, there is a risk that the engine and cooling system will overheat.

Avoid overheating the cooling system
- Maintain a low speed when driving with a trailer up long, steep ascents.
- Do not turn the engine off immediately you stop after a hard drive.
- Remove any auxiliary lamps from in front of the grille if driving in extreme high temperatures.

Avoid overheating the engine
Do not exceed engine speeds of 4500 rpm (diesel engine: 3500 rpm) if driving with a trailer or caravan in hilly terrain. The oil temperature can become too high.

Open tailgate
Avoid driving with the tailgate open. If it is necessary to drive with the tailgate open for a short distance, proceed as follows:
- Close all windows.
- Set the air distribution to the windscreen and floor and run the fan at high speed.

WARNING
Do not drive with the tailgate open. Toxic exhaust fumes can be drawn into the car through the cargo area.

Driving on rough roads
The Volvo XC90 is primarily designed for driving on main roads, but also has good handling properties on uneven or rough roads. Keep the following in mind in order to preserve the service life of your car:
- Drive slowly on rough roads so you do not damage the car’s underbody.
- If the ground is loose or is made up of dry sand or snow, it is always best to keep the car moving at all times and avoid shifting. Do not stop the car.
- If the road is extremely steep and there is a risk of overturning, never try to turn the car around. Reverse back down. Do not drive diagonally across an incline. Drive in the direction of the incline.

Driving in water
The car can be driven through water at a maximum depth of 40 cm at a maximum speed of 10 km/h. Extra caution should be exercised when passing through flowing water.

NOTE
Avoid driving on steep slopes if the fuel level is low. The catalytic converter could be damaged if the engine does not receive enough fuel. When driving on extremely steep slopes, make sure the tank is more than half full to avoid the risk of breakdown.
06 Starting and driving

General

Do not overload the battery
The electrical functions in the car load the battery to varying degrees. Avoid having the ignition key in position II when the engine is switched off. Use position I instead, as less power is used. The 12 volt outlet in the cargo area supplies power even when the ignition key is removed.

Examples of functions that use a lot of power:
• ventilation fan
• windscreen wipers
• audio equipment (high volume)
• parking lights

Also, be aware of different accessories that load the electrical system. Do not use functions which use a lot of power when the engine is switched off.

If the battery voltage is low, a message appears on the display. The energy-saving function shuts down certain functions or reduces the load on the battery by, for example, slowing the ventilation fan and switching off the audio equipment. Charge the battery by starting the engine.

IMPORTANT
Engine damage can occur if water enters the air filter.
In greater depths, water can enter the transmission. This reduces the lubricating ability of the oils and shortens the service life of these systems.

When driving in water, maintain a low speed and do not stop the car. When the water has been passed, depress the brake pedal lightly and check that full brake function is achieved. Water and mud for example can make the brake linings wet resulting in delayed brake function.

NOTE
Clean the electric contacts of the electric engine block heater and trailer coupling after driving in water and mud.

IMPORTANT
Do not let the car stand with water over the sills for any long period of time. This could cause electrical malfunctions.
In the event of stalling in water, do not try to restart. Tow the car out of the water.
Refuelling

Opening the fuel filler flap

The fuel filler flap can be opened when the car is unlocked.

Proceed as follows:
- Lift up the corner piece from the floor in the rear right-hand corner of the cargo area.
- Open the fuel filler flap by lifting up the handle and pulling it out.
- Fold aside the insulation in order to access the flap’s electrical lock.
- Insert your hand and locate the lock. It’s location is approximately inside the rear edge of the fuel filler flap.
- Pull the lock plunger straight back. The flap can now be folded out. After refuelling the flap can be relocked by closing it and pushing the lock plunger forward.

The filler flap remains unlocked for ten minutes after the car is locked. It then locks automatically.

Emergency unlocking of the fuel filler flap

The fuel filler flap can be opened manually when necessary if it cannot be opened normally.

WARNING

There are sharp edges behind the panel so move your hands slowly and carefully.
Refuelling

Fuel filler flap

High outside temperatures can cause some overpressure in the tank. Open the cap slowly.

NOTE
Refit the fuel cap after refuelling. Turn until one or more clear clicks are heard.

Filling up with fuel

Do not overfill the tank but fill until the pump nozzle cuts out.

NOTE
Excess fuel in the tank can overflow in hot weather.

Fuel of a lower quality than that specified on page 242 should not be used as engine power and fuel consumption can be negatively affected.

WARNING
Fuel which spills onto the ground can be ignited by the exhaust fumes. Switch off the fuel-driven heater before starting to refuel.
Never carry an activated mobile phone when refuelling. The ring signal could cause spark build-up and ignite petrol fumes, leading to fire and injury.

Petrol

IMPORTANT
Do not add cleaning additives to the petrol, unless recommended by Volvo.

Diesel

IMPORTANT
Use special winter grade fuel during cold months.

At low temperatures (~5°C to ~40°C), a paraffin precipitate may form in the diesel fuel, which can lead to ignition problems.

IMPORTANT
Use special winter grade fuel during cold months.
Starting the engine

Before starting the engine

– Apply the parking brake.

Automatic gearbox

– Gear selector in position P or N.

Manual gearbox

– Shift the gear lever into neutral and hold the clutch pedal fully depressed. This is particularly important in very cold conditions.

Starting the engine

Petrol

– Turn the ignition key to position III.

If the engine does not start within 5–10 seconds, release the key and try again.

Diesel

1. Turn the ignition key to position II. An indicator symbol in the combined instrument panel shows that engine pre-heating is underway, see page 44.

2. Turn the ignition key to position III when the indicator symbol goes out. Diesel particle filter (DPF)¹

Diesel cars may be equipped with a particle filter, which results in more efficient emission control. The particles in the exhaust gases are collected in the filter during normal driving. So-called regeneration is started in order to burn away the particles and empty the filter. This requires the engine to have reached normal operating temperature.

Regeneration of the filter takes place automatically at an interval of 300 – 900 km depending on driving conditions. Regeneration normally takes between 10 and 20 minutes. During this time fuel consumption may increase slightly.

The rear window heating may be activated automatically to increase the load on the engine during regeneration without warning.

Regeneration in cold weather

If the car is frequently driven short distances in cold weather then the engine does not reach normal operating temperature. This means that regeneration of the diesel particle filter does not take place and the filter is not emptied.

When the filter has become approximately 80 % full of particles, the yellow information symbol on the instrument panel illuminates, and the message SOOT FILTER FULL SEE MANUAL is shown on the instrument panel display. Start regeneration of the filter by driving the car until the engine reaches normal operating temperature, preferably on a main road or motorway. The car should then be driven for approximately 20 minutes more. When regeneration is complete the message is cleared automatically.

¹ Certain markets.
Use the parking heater (option) in cold weather so that the engine reaches normal operating temperature more quickly.

**Ignition keys and electronic immobiliser**

The ignition key must not hang with other keys or metal objects on the same key ring. The electronic immobiliser could otherwise be activated accidentally.

Never rev the engine hard straight after a cold start! If the engine does not start or misfires, contact a Volvo workshop.

**IMPORTANT**

If the filter fills up it may be incapable of functioning. Then it can be difficult to start the engine and there is a risk that the filter will have to be replaced.

Use the parking heater (option) in cold weather so that the engine reaches normal operating temperature more quickly.

**Ignition switch and steering lock**

0 – Locked position
The steering lock is activated when the key is removed from the lock.

I – Radio position
Certain electrical components can be switched on. The engine’s electrical system is not activated.

II – Driving position
Key position when driving. The car’s electrical system is connected.

III – Start position
The starter motor is engaged. Release the key, which springs back automatically to the driving position, once the engine has started.

If the key is hard to turn, the front wheels may be turned in such a way that there is tension in the steering wheel lock. In which case, turn the wheel back and forth to make it easier to turn the key.

**WARNING**

Never switch off the ignition (position 0 or 1) or remove the ignition key while the car is moving. The steering lock could otherwise be activated, making it impossible to steer the car.

Always remove the ignition key from the steering lock when leaving the car – especially if children are left alone in the car.

**NOTE**

Make sure the steering wheel locks when you leave the car. This reduces the risk of theft.

**Autostart (3.2 and V8)**

Using the autostart function, the ignition key does not need to be kept in the start position (position III) until the engine has started. Turn the ignition key to the start position and release it. The starter motor then operates automatically (up to ten seconds) until the engine has started.
Manual gearbox

Gear positions

- Depress the clutch pedal fully during each gear change.
- Remove your foot from the clutch pedal between gear changes. Follow the appropriate shifting pattern.

Use 6th gear as often as possible for the best possible fuel economy.

Reverse gear inhibitor

Only engage reverse gear when the car is stationary.
**Cold start**

When starting in low temperatures, the gear changes can sometimes feel hard. This is due to the gearbox oil’s viscosity at low temperatures. To minimise engine emissions, the gearbox shifts up later than normal when the engine is started at low temperatures.

**NOTE**

Depending on the engine temperature when the engine is started, the idle speed after a cold start may be higher than normal for certain engine types.

**Turbo engine**

When the engine is cold, the transmission shifts gears at higher revs. This allows the catalytic converter to reach normal operating temperature more quickly, with less exhaust emissions.

**Adaptive system**

The gearbox is controlled by what is known as an adaptive system. The system continually monitors how the gearbox is behaving and senses every gear change for optimum change quality.

**Lock-up function**

The gears have a lock-up function (locked gears), which gives better engine braking and lower fuel consumption.

**Kick-down**

When the accelerator pedal is pressed all the way to the floor, beyond the position normally regarded as full acceleration, a lower gear is immediately engaged. This is known as kick-down.

If the accelerator is released from the kick-down position, the gearbox automatically changes up.

Kick-down is used when maximum acceleration is needed, such as for overtaking.

To prevent overrevving, the gearbox control program has a protective downshift inhibitor which prevents the kick-down function.

The kick-down function cannot be used in manual gear position.

**Safety systems**

Cars with an automatic gearbox have special safety systems:

**Keylock**

To remove the ignition key, the gear selector must be in the P position. The key is locked in all other positions.

**Parking position (P position)**

Stationary car with engine running:

– Hold your foot on the brake pedal when moving the gear selector to another position.

**Electric gear inhibitor – Shiftlock**

**Parking position (P position)**

To be able to move the gear selector from the P position to other gear positions, the ignition key must be in position I or II and the brake pedal must be depressed.

**Shiftlock – Neutral (N position)**

If the gear selector is in the N position and the car has been stationary for at least three seconds (irrespective of whether the engine is running) then the gear selector is locked in the N position.

To be able to move the gear selector from the N position to another gear position, the brake pedal must be depressed and the ignition key must be in position II.
**06 Starting and driving**

**Automatic gearbox**

- **P – Parking position**
  Select position P when you wish to start the engine or park the car.

  **IMPORTANT**
  The car must be stationary when position P is selected.

  **NOTE**
  The brake pedal must be depressed to move the gear selector from the P position.

- **R – Reverse**
  The car must be stationary when R is selected.

- **N – Neutral**
  N is the neutral position. No gear is engaged and the engine can be started. Apply the parking brake when the car is stationary with the gear selector in position N.

- **D – Drive**
  D is the normal driving position. The car automatically shifts between the different gears of the gearbox based on the level of acceleration and speed. The car should be stationary when D is selected from position R.

In P the gearbox is mechanically locked. Always apply the parking brake when parking the car.
The gear selector can always be moved freely between N and D. Other positions are locked with a catch that is released with the inhibitor button on the gear selector.

With one press on the inhibitor button you can move the lever forwards or backwards between the gear positions, N, R and P.

Manual positions
To move from the automatic driving position D to a manual position, move the gear selector to position M. To go from position M to the automatic driving position D, move the selector to position D.

On the 5-speed automatic gearbox, gears 3, 4 and 5 have the Lock-up function (locked gears), which provides better engine braking and lower fuel consumption.

While driving
The manual gearshift mode can be selected at any time while driving. The engaged gear is locked until you choose another gear.

If the gear selector is moved to – (minus) the car changes down a gear and engine brakes at the same time as the accelerator pedal is released. If the gear selector is moved to + (plus) the car changes up a gear.

Third gear is the highest gear that can be used when starting.

W – Winter
The W button is used to activate and deactivate the winter program W. Display of the W symbol in the combined instrument panel indicates that the winter program is active.

The winter programme starts the gearbox in 3rd gear to make it easier to pull off on slippery roads. When the programme is engaged, lower gears are activated only by kick-down.

The W program can be selected regardless of the position of the gear selector, but is only operational when the selector is in position D.

1 2nd and 6th gear also have lock-up on the 6-speed automatic gearbox.
All-wheel drive

All-wheel drive – AWD
All-wheel drive is always engaged.
All-wheel drive means that all four road wheels are driven at the same time. Power is automatically distributed between front and rear wheels. An electronically controlled clutch system distributes the power to the pair of wheels that grips best. This provides the best traction and prevents wheel spin.

Under normal driving conditions, the majority of power is transmitted to the front wheels.
All-wheel drive improves driving safety in rain, snow and icy conditions.
Brake system

06 Starting and driving

Brake servo

If the car is rolling or is being towed with the engine turned off, the brake pedal must be pressed about five times harder than when the engine is running. If the brake pedal is pressed when the engine is started, you will feel the pedal drop. This is normal and due to the brake servo becoming active. This may be more noticeable if the car has emergency brake assistance (EBA).

Brake circuits

This symbol illuminates if a brake circuit is not working.

If a fault should occur in one of the circuits, it is still possible to brake the car. The brake pedal will travel further and may feel softer than normal. Harder pressure on the pedal is needed to produce the normal braking effect.

Dampness can affect braking characteristics

Brake components become wet when the car is driven in heavy rain, through pools of water or when the car is washed. This may alter brake pad friction characteristics so that there is a delay before braking effect is noticed.

Press the brake pedal lightly from time to time if driving for long stretches in rain or slushy snow, as well as after setting off in very damp or cold weather. This warms up the braking surfaces and dries off any water. It is also recommended to do this before parking the car for a long period in such weather conditions.

If the brakes are used heavily

When driving in the Alps or other roads with similar characteristics, the car’s brakes are heavily loaded even if the brake pedal is not being depressed especially hard.

Because speed is often low, the brakes are not cooled as effectively as when driving on flat roads at higher speed.

So as not to overload the brakes, shift down when driving downhill instead of using the foot brake. Use the same gear driving downhill as you would use driving uphill. This method uses engine braking more efficiently and requires the foot brake for only brief periods.

Bear in mind that driving with a trailer puts an additional load on the car’s brakes.

Anti-lock braking system (ABS)

The anti-lock braking system (ABS) prevents the wheels from locking up under braking.

This means the ability to steer is maintained and it is easier to swerve to avoid a hazard, for example.

After the engine has been started, the ABS will perform a brief self-test at a speed of about 20 km/h. This can be felt and heard as pulses in the brake pedal.

To get the most out of the ABS:

– Depress the brake pedal with full force. Pulses will be felt.
– Steer the car in the direction of travel. Do not release the pressure on the pedal.

Practice braking with the ABS system in a traffic-free area and in different weather conditions.

The ABS symbol illuminates for two seconds if there was a fault in the ABS system when the engine was last running.

WARNING

The brake servo only works when the engine is running.

NOTE

If braking with the engine switched off, press the brake pedal sharply once, not repeatedly.

NOTE

If the engine is switched off, press the brake pedal sharply once, not repeatedly.
Brake system

Electronic brake force distribution system – EBD
The Electronic Brakeforce Distribution system (EBD) is an integrated part of the ABS system. The EBD system controls the brake force to the rear wheels so that the best possible braking force is always available. Pulses will be heard and felt through the brake pedal when the system regulates brake force.

WARNING
If the BRAKE and ABS warning symbols are lit at the same time, a fault may have occurred in the brake system. If the level in the brake fluid reservoir is normal, drive carefully to the nearest authorised Volvo workshop to have the brake system checked.
If the brake fluid is under the MIN level in the brake fluid reservoir, do not drive further before topping up the brake fluid.
The reason for the loss of brake fluid must be investigated.

Emergency brake assistance – EBA
(Emergency brake assistance) In case of sudden braking, full-strength braking is provided instantaneously. The EBA function senses when heavy braking is underway by registering how quickly the brake pedal is depressed. Continue braking without easing off on the brake pedal. The function is suspended when the pressure on the brake pedal eases. This function is always active and cannot be disengaged.

NOTE
When EBA is activated the brake pedal lowers slightly more than usual, depress (hold) the brake pedal as long as necessary. If the brake pedal is released then all braking ceases.
**General**

The Dynamic Stability and Traction Control system (DSTC) improves the car’s traction and helps the driver to avoid skidding.

A pulsing sound may be noticed during braking or acceleration when the system is in action. The car may accelerate more slowly than expected.

**Active Yaw Control**

The function limits the driving and brake force of the wheels individually in order to stabilise the car.

**Spin Control**

The function prevents the driving wheels from spinning against the road surface during acceleration.

**Traction control system**

The function is active at low speed and transfers power from the driving wheel that is spinning to the one that is not.

**Reduced operation**

System operation during skidding and acceleration can be partially deactivated.

Operation during skidding is delayed and so allows more skidding which provides greater freedom for dynamic driving.

Traction in deep snow or sand is improved as acceleration is no longer limited.

**Operation**

– Turn the thumbwheel (1) until the DSTC menu appears.

DSTC ON means that the system function is unchanged.

DSTC SPIN CONTROL OFF means that system operation is reduced.

– Press and hold **RESET** (2) until the DSTC menu is changed.

At the same time the symbol \( \text{\text{A}} \) illuminates as a reminder that the system has been reduced. The system remains reduced until the engine is next started.

**WARNING**

Suppressing system function may alter the driving characteristics of the car.

**NOTE**

DSTC ON is shown for several seconds in the display each time the engine is started.

**Messages on the display**

TRACTION CONTROL TEMPORARILY OFF means that the system has been temporarily reduced due to excessive brake temperature. The function is reactivated automatically when the brakes have cooled.

DSTC SERVICE REQUIRED means that the system has been disabled due to a fault.

– Stop the car in a safe place and turn off the engine.

If the message remains when the engine is restarted, drive to an authorised Volvo workshop.
Stability and traction control system (option)

Symbols in the combined instrument panel

**DSTC system**

The symbol illuminates and goes out again after approx. two seconds
Indicates system check when the engine is started.

The symbol flashes
Indicates that the system is operating.

The symbol illuminates and stays lit
DSTC SERVICE REQUIRED is shown in the display at the same time.
Indicates a fault in the DSTC system.

– Stop the car in a safe place and turn off the engine.
– Restart the car.
  • If the warning symbol goes out, the fault was temporary and it is not necessary to visit a workshop.
  • If the warning symbol remains lit, drive to an authorised Volvo workshop to have the system checked.

The symbol illuminates and stays lit
DSTC SPIN CONTROL OFF is shown in the display at the same time.
Reminds that the DSTC system has been reduced.

**Symbol for Warning**

The symbol illuminates with a constant yellow glow and
TRACTION CONTROL TEMPORARILY OFF is shown in the display at the same time.
Indicates that the system has been temporarily reduced due to excessive brake temperature.
Automatic reactivation of the function takes place when the brake temperature has returned to normal.

**WARNING**

Under normal driving conditions, the DSTC system improves the car’s road safety, but this should not be taken as a reason to increase speed.
Always follow the usual precautions for safe cornering and driving on slippery road surfaces.
Parking assistance (option)

General

Parking assistance is used as an aid to parking. A signal indicates the distance to a detected object.

Variants
Parking assistance is available in two variants:
- Rear only
- Both front and rear

Function
The system is switched on automatically when the car is started at which point the lamp in the switch for parking assistance illuminates.

The display shows the text message PARK ASSIST ACTIVE if reverse gear is engaged or if the front sensors detect an object.

Parking assistance is active at speeds below 15 km/h. The system is deactivated at higher speeds. The system is reactivated when the speed falls below 10 km/h again.

The frequency of the signal increases as you come closer to an object in front of or behind the car. If the volume of another sound source from the audio system is high, this is automatically muted.

The tone becomes constant at a distance of about 30 cm. If there are objects within this distance behind or in front of the car, the signal alternates between left and right-hand speakers.

Rear parking assistance
The distance covered to the rear of the car is about 1.5 m. Rear parking assistance is activated when reverse gear is engaged. The signal comes from the rear loudspeakers.

The system must be deactivated when reversing with a trailer, or bike carrier on the towbar or similar. Otherwise the trailer or bike carrier would trigger the sensors.

Rear parking assistance is deactivated automatically when towing a trailer if a Volvo genuine trailer cable is used.

Front parking assistance
The distance covered to the front of the car is about 0.8 metres. The signal comes from the front loudspeakers.

Front parking assistance cannot be combined with extra lights because the sensors are affected by the extra lights.

1 Depending on the market, the Parking assistance system may be either Standard, Option or Accessory.

WARNING
Parking assistance does not relinquish the driver's own responsibility during parking. The sensors have blind spots where objects cannot be detected. Be aware of children and animals near the car.
Parking assistance (option)

Fault indicator
If the information symbol illuminates with constant glow and the display shows PARK ASSIST SERVICE REQUIRED then parking assistance is disengaged.

IMPORTANT
In certain conditions the parking assistance system may produce incorrect warning signals that are caused by external sound sources that emit the same ultrasonic frequencies that the system works with. Examples of such sources include horns, wet tyres on asphalt, pneumatic brakes and exhaust noises from motorcycles etc.

Off/On

Button position in the row may vary.

Cleaning the sensors

Parking assistance sensors.
The sensors must be cleaned regularly to ensure that they work properly. Clean them with water and car shampoo.

NOTE

Dirt, ice and snow covering the sensors may cause incorrect warning signals.
06 Starting and driving

**Blind Spot Information System – BLIS (option)**

### General

- **1. BLIS camera**
- **2. Indicator lamp**
- **3. BLIS symbol**

**WARNING**

The system is a supplement to, not a replacement for, a safe driving style and use of the rearview mirrors. It can never replace the driver’s attention and responsibility. The responsibility for changing lanes safely always rests with the driver.

BLIS is an information system that under certain conditions can help to draw the driver’s attention to vehicles moving in the same direction in the so-called “blind spot”.

The system is designed to work most effectively when driving in dense traffic on multi-lane highways.

BLIS is based on digital camera technology. The cameras (1) are fitted under the door mirrors.

When a camera has detected a vehicle inside the blind spot zone the indicator lamp (2) illuminates with a constant glow.

**NOTE**

The lamp illuminates on the side of the car where the system has detected the vehicle. If the car is overtaken on both sides at the same time then both lamps illuminate.

BLIS advises the driver with a message if a fault arises in the system. If for example the system’s cameras are obscured then the BLIS indicator lamp flashes and the information display shows a message. In such cases, check and clean the lenses. If necessary, the system can be switched off temporarily by pressing the BLIS button, see page 128.

**Blind spots**

“Blind spots” intended to be covered by BLIS cameras.

- Distance A = approx. 3.0 m
- Distance B = approx. 9.5 m

**Cleaning**

In order to work most effectively the BLIS camera lenses must be clean. The lenses can be cleaned with a soft cloth or damp sponge. Clean the lenses carefully so that they are not scratched.

**IMPORTANT**

The lenses are electrically heated to melt ice or snow. If necessary, brush snow away from the lenses.
Blind Spot Information System – BLIS (option)

When BLIS operates
The system is active when the car is driven at a speed above 10 km/h.

Overtaking
The system is designed to react if you overtake at a speed of up to 10 km/h faster than the overtaken vehicle.
The system is designed to react if you are overtaken by a vehicle travelling up to 70 km/h faster than your vehicle.

⚠️ WARNING
BLIS does not work in sharp bends.
BLIS does not work when the car is reversing.
A wide trailer coupled to the car can conceal other vehicles in adjacent lanes. It can prevent the vehicle in the screened area from being detected by BLIS.

Daylight and darkness
In daylight the system reacts to the shape of the surrounding vehicles. The system is designed to detect motor vehicles such as cars, trucks, buses and motorcycles.
In darkness the system reacts to the headlamps of surrounding vehicles. Vehicles with headlamps that are switched off are not detected by the system. This means for example that the system does not react to a trailer without headlamps which is towed behind a car or truck.

⚠️ WARNING
The system does not react to bicycles or mopeds.
The BLIS cameras can be disrupted by intensive light or when driving in the dark when there are no light sources (e.g. street lighting or other vehicles). The system may then interpret the lack of light as if the cameras have been blocked.
In both cases a message is shown on the display.
When driving in such conditions system performance may be temporarily reduced and a text message is shown, see page 129.
If the message disappears automatically then BLIS has returned to normal functionality.
The BLIS cameras have limitations similar to the human eye, i.e. they "see" worse in heavy snowfall or thick fog for example.

Activating/deactivating

Button for activating/deactivating.
BLIS is activated when the engine is started. The indicator lamps in the door panels flash three times when BLIS is activated.
The system can be deactivated/activated by pressing BLIS.
When BLIS is deactivated the light in the button goes out and a text message is shown on the instrument panel display.
When BLIS is activated the light in the button illuminates, a new text message is shown on the display and the indicator lamps in the door panels flash three times. Press the READ button to clear the text message. For more information on messages, see page 45.
### BLIS system message

<table>

</tbody>
</table>

The messages above are only shown if the ignition key is in position II (or if the engine is running) and **BLIS** is active (i.e. if the driver has not switched off the system).

**IMPORTANT**

Repair of the BLIS system components must only be performed by an authorised Volvo workshop.

### Limitations

In some situations the BLIS indicator lamp may illuminate despite there being no other vehicle within the blind spot.

**NOTE**

If the BLIS indicator lamp illuminates on isolated occasions despite there being no other vehicle within the blind spot then this does not mean that a fault has arisen in the system.

In the event of a fault in the BLIS system the display shows the text **BLIS Serv. required.**

Here are several examples of situations where the BLIS indicator lamp may illuminate even if there is no other vehicle within the blind spot.

- Reflection from shiny wet road surface.
- Own shadow on large, light, smooth surface, e.g. noise barrier or concrete road surface.
- Low sun in the camera.
Never tow the car to bump start it
Jump start the car with a donor battery if the battery is flat and the engine does not start. Do not bump start the car.

**IMPORTANT**
Bump starting the car can damage the catalytic converter.

**Towing**
Find out the highest legal speed for towing before towing the car.
- Unlock the steering wheel lock so that the car can be steered.
- Bear in mind that the brake and power steering servos do not function when the engine is off. Approx. five times more pressure must be exerted on the brake pedal and steering requires much more force than usual.
- Drive gently. Keep the towline taut to avoid unnecessary jerking.

**Automatic gearbox:**
- Move the gear selector to position N.
Cars with automatic gearbox must not be towed at speeds above 80 km/h or further than 80 km. The car must always be towed facing forward. The engine cannot be bump started. "Jump starting", see page 132.

**Manual gearbox:**
- Move gear lever into neutral.
- Ensure the towrope is always taut to avoid violent jerks. Keep your foot on the brake pedal.

**Recovery**
If only partially raised, cars with automatic gearbox must not be transported at speeds above 80 km/h or further than 80 km. During such transport, the wheels must always roll forward.

**WARNING**
The steering lock stays in the position it was in when the power was cut off. The steering lock must be unlocked before towing.
The ignition key must be in position II. Never remove the ignition key from the ignition switch while driving or when the car is being towed.

**WARNING**
The brake servo and power steering do not work when the engine is switched off. The brake pedal must be pressed about five times harder than normal, and the steering will be considerably heavier than normal.
The towing eye is in the tool kit in the cargo area. You must screw the towing eye into place before towing. The socket and cover for the towing eye are on the right-hand side of each bumper.

Remove the cover as follows:
- Release the bottom edge of the cover (A) with a coin.
- Screw in the towing eye (B) firmly
- Screw in firmly, right up to the flange (C). You can use a wheel brace.

After use, unscrew the towing eye and refit the cover.

The towing eye may only be used for towing on roads, not for recovery after driving into a ditch or the like. Professional help should be called for recovery.

**IMPORTANT**

The towing eye cannot be fitted in the rear bracket on cars with towbar. In which case, secure the tow rope in the towbar. For this reason, it is advisable to always store the detachable towbar in the car.
06 Starting and driving

Start assistance

Starting with a donor battery

If the battery in the car has become flat, you can “borrow” electric current from either a separate battery or the battery in another car. Always make sure the crocodile clips on the jump leads are attached securely to eliminate sparks during the start attempt.

When jump starting the car, the following steps are recommended to avoid risk of explosion:

- Turn the ignition key to position 0.
- Ensure that the donor battery is 12 volt.
- If the donor battery is in another car, switch off the engine in the other car and ensure that the cars do not touch one another.

- Connect the red jump lead between the positive terminal on the donor battery (1+) and the positive terminal in your car (2+).
- Connect one end of the black jump lead to the donor battery’s negative terminal (3–).
- Connect the other end of the black jump lead to the earthing point (4–) by the left-hand strut tower.
- Start the engine of the "donor car". Let the engine run a few minutes at a speed slightly higher than idle 1500 rpm.
- Start the engine of the car with the flat battery.
- Remove the jump leads, first the black and then the red. Ensure that neither of the black jump lead’s clips comes into contact with the battery’s positive terminal or the crocodile clip on the red jump lead.

IMPORTANT
Do not touch the crocodile clips during the start attempt. This could cause sparks.

WARNING
The battery can generate oxyhydrogen gas, which is highly explosive. One spark, which can be generated if you connect the jump leads incorrectly, is sufficient to make the battery explode. The battery contains sulphuric acid, which can cause serious burns. If the acid comes into contact with eyes, skin or clothing, flush with large quantities of water. If acid splashes into the eyes, seek medical attention immediately.
Driving with a trailer

General
The load capacity is affected by extra accessories mounted on the car, such as a towbar, load carriers, space box, the passengers’ combined weight etc. as well as towball load. The load capacity of the car is reduced by the number of passengers and their weight. If the towing bracket is fitted by an authorised Volvo workshop, then the car is delivered with the necessary equipment for driving with a trailer.

- The car’s towing bracket must be of an approved type.
- If the towbar is retrofitted, check with your Volvo dealer that the car is fully equipped for driving with a trailer.
- Distribute the load on the trailer so that the weight on the towing bracket follows the specified maximum towball load.
- Increase the tyre pressure to the recommended pressure for a full load. For tyre pressure decal location, see page 154.
- Clean the towbar regularly and grease the towball\(^1\).
- Do not drive with a heavy trailer when your car is brand new. Wait until it has been driven at least 1000 km.

\(^1\) Does not apply to the towball if using a stabiliser hitch.

- The brakes are loaded much more than usual on long and steep downhill slopes. Downshift to a lower gear and adjust your speed.
- The engine is loaded more heavily than usual when driving with a trailer.
- The engine and gearbox can overheat if the car is driven with a heavy load in hot weather. If the temperature gauge for the engine’s cooling system goes into the red zone, stop and let the engine idle for a few minutes. The automatic gearbox responds through a built-in protection system. See the message on the display. If the car overheats, the air conditioning may be switched off temporarily.

WARNING
Follow the stated recommendations for trailer weights. Otherwise, the rig may be difficult to control during evasive manoeuvres and braking.

NOTE
The stated maximum permitted trailer weights are those permitted by Volvo. National vehicle regulations can further limit trailer weights and speeds. Towbars can be certified for higher towing weights than the car can actually tow.

Trailer weights
Information on permitted trailer weights, see page 236.

- Do not drive with a heavy trailer when your car is brand new. Wait until it has been driven at least 1000 km.
Driving with a trailer

**Automatic gearbox, driving with a trailer**

**NOTE**
Some models require an oil cooler for the automatic gearbox when driving with a trailer. Check with your nearest Volvo dealer as to what applies to your car if you have a retrofitted towbar.

Parking on a hill
- Apply the parking brake.
- Move the gear selector to park position P.

Starting on a hill
- Move the gear selector to driving position D.
- Release the parking brake (foot brake pedal).

**Steep inclines**
- Select an appropriate manual gear position when climbing steep inclines or at low speeds. This prevents the gearbox from changing up and keeps the gearbox oil cooler.
- Do not use a higher manual gear than the engine can "handle". It is not always economical to drive in high gears.
- Avoid driving with a trailer on inclines of more than 15 %.

**Assisted starting with a trailer**
Cars equipped with a V8 engine have an integrated function which reduces the risk of significant jerking and wheelspin when starting with a trailer hitched to the car.

**Activating**
To activate, the cables from the trailer must be connected to the trailer socket which is fitted beside the towbar, see page 135.

**Deactivating**
Unplug the cables from the electrical socket.

**NOTE**
The function is also activated when any other electrical equipment is plugged into the trailer socket, and the car then accelerates more gently when pulling away.

**Levelling**
If your car is equipped with automatic levelling, the rear suspension always retains the correct ride height regardless of load. When the car is stationary, the rear suspension sinks. This is completely normal. When starting with a load, the level is pumped up after a certain distance.

**NOTE**
Some models require an oil cooler for the automatic gearbox when driving with a trailer. Check with your nearest Volvo dealer as to what applies to your car if you have a retrofitted towbar.
Towing equipment

**Towbar**

The towball must be cleaned and greased regularly. If a towball hitch with vibration damper is used, it is not necessary to grease the towball.

If the car is equipped with a detachable towbar, the towball mounting instructions must be followed carefully, see page 137.

**WARNING**

Be sure to attach the trailer’s safety cable to the correct place.

**WARNING**

If the car is fitted with a Volvo detachable towbar:
- Follow the assembly instructions for the towball section carefully.
- The towball section must be locked with the key before setting off.
- Check that the indicator window shows green.

**NOTE**

Always remove the towball section after use. Keep it in the cargo area.

**Trailer cable**

An adapter is required if the car’s towbar has 13 pin electrics and the trailer has 7 pin electrics. Use an adapter cable approved by Volvo. Make sure the cable does not drag on the ground.

Fitting the towball

- Remove the guard plug.
- Ensure that the mechanism is in the unlocked position by turning the key clockwise.
- Check that the indicator window (3) shows red. If the window does not show red, press in (1) and turn the locking wheel anticlockwise (2) until you hear a click.
Detachable towbar

- Insert the towball section until you hear a click.
- Check that the indicator window shows green.
- Turn the key anticlockwise to the locked position. Remove the key from the lock.
Check that the towball section is secure by pulling it up, down and back. If the towball section is not fitted correctly then it must be removed and refitted in accordance with the previous steps.

The trailer’s safety cable must be attached to the attachment on the towbar.
06 Starting and driving

**Detachable towbar**

**Removing the towball**

- Insert the key and turn it clockwise to the unlocked position.
- Push in the locking wheel (1) and turn it anticlockwise (2) until you hear a click.
- Turn the locking wheel down fully, until it comes to a stop. Hold it in this position while pulling the towball rearward and upward.
– Insert the guard plug.
06 Starting and driving

Loading

General
The load capacity is affected by extra accessories mounted on the car, such as towbar, towball load, load carriers, space box etc. and the passengers’ combined weight. The load capacity of the car is reduced by the number of passengers and their weight. For information on permitted weights, see page 236.

WARNING
The car’s driving characteristics change depending on how heavily it is loaded and how the load is distributed.

Load on the roof
Load carrier position (accessory)
Make sure the load carrier is placed in the right direction on the roof rails. Load carriers can be positioned anywhere along the roof rails. When driving without a load, the front load carrier should be positioned 200 mm in front of the centre rail foot and the rear load carrier centred between the centre and rear rail foot (see illustration) to minimise wind noise. The longer load carrier should be in the front.

WARNING
The car’s centre of gravity and driving characteristics are altered by roof loads.

Fitting load carriers
Make sure the load carriers are pressed out firmly against the roof rails. Screw in the load carrier. Use the enclosed torque wrench, and tighten up to the mark on the torque wrench (equivalent to 6 Nm). See illustration.
Load carrier cover

Use the end of the torque wrench (see illustration) or the ignition key to loosen or secure the cover. Rotate ¼ turn.

Load carriers

- To avoid damaging your car and to achieve the best level of safety when driving, we recommend that you only use load carriers that Volvo has specially designed for your car.
- Check periodically that the load carriers and load are properly secured. Lash the load securely with retaining straps.
- Distribute the load evenly over the load carriers. Do not load lopsidedly. Place the heaviest items at the bottom.

- Remember that the car’s centre of gravity and driving characteristics change if you have a load on the roof.
- Keep in mind that the car’s wind resistance and fuel consumption increase in proportion to the size of the load.
- Drive gently. Avoid quick accelerations, heavy braking and taking curves hard.

**WARNING**

Load no more than 100 kg on the roof, inclusive of the load carriers or space box. The car’s centre of gravity and driving characteristics are altered by roof loads.
Correct light pattern for right or left-hand traffic

A. Headlamp pattern for left-hand traffic
B. Right-hand traffic

So as not to dazzle oncoming drivers, the headlamp beam pattern can be altered by masking the headlamps. The quality of the beam pattern may not be as good.

Headlamp masking
Copy the templates found on page 145. Transfer the pattern to a self-adhesive, waterproof material such as opaque tape or similar.

The mask is positioned using the dot (5) in the headlamp lens as a reference point, which should align with the red dot on the respective template. The long red line on the illustrations corresponds to the line in the headlamp lens to which the template should be matched.

After copying the templates, check the measurements so that the reference measurements cover enough of the beam pattern. The templates are for both LHD and RHD variants and are positioned as illustrated. The mask is positioned using the dot (5) in the headlamp lens as a reference point, which should align with the red dot on the respective template. The long red line on the illustrations corresponds to the line in the headlamp lens to which the template should be matched.

Bi-Xenon headlamps
Copy templates 3 and 4. Check the measurements to ensure they are correct. Transfer the template to a self-adhesive, waterproof material and cut it out.

Position the templates so that the arrows point towards the centre and the dots on the templates match the dots on the headlamp lenses. The template marking > < should be aligned with the line on the headlamp lens.

Reference measurements template 3:
The line between the > < markings on the templates should be approx. 140 mm.

Reference measurements template 4:
The line between the > < markings on the templates should be approx. 112 mm.

Adjusting headlamp pattern for Active Bi-Xenon Lights ABL see page 47.
Fitting the mask to the headlamps. The upper illustration is for LHD variants and the lower illustration is for RHD variants. Templates 1 and 2 are for halogen headlamps, 3 and 4 are for Bi-Xenon headlamps.
06 Starting and driving

Adjusting headlamp pattern
Driving characteristics and tyres

The tyres greatly affect the car’s driving characteristics. The type of tyre, dimensions, tyre pressure and speed rating are important for how the car performs.

When changing tyres, ensure that tyres of the same type and dimensions, and preferably also the same make, are fitted to all four wheels. Follow the recommended tyre pressures specified on the tyre pressure label, see page 153.

Designation of dimensions

The dimensions are stated on all car tyres. Example of designation: 225/70R16 102 H.

<table>
<thead>
<tr>
<th>225</th>
<th>Section width (mm)</th>
</tr>
</thead>
<tbody>
<tr>
<td>70</td>
<td>Ratio between section height and width (%)</td>

<td>16</td>
<td>Rim diameter in inches (&quot;&quot;)</td>
</tr>
<tr>
<td>102</td>
<td>Tyre load index (in this case 615 kg)</td>
</tr>
<tr>
<td>H</td>
<td>Speed rating (in this case 270 km/h)</td>
</tr>
</tbody>
</table>

Speed ratings

The car has “Whole Vehicle Type Approval”, which means that dimensions and speed ratings must not differ from those specified on the vehicle’s registration document. The only exception to these conditions is winter tyres (both those with studs and those without). If such a tyre is chosen, the car must not be driven faster than the speed rating of the tyre (for example, class Q can be driven at a maximum of 160 km/h).

Remember that traffic regulations determine how fast a car can be driven, not the speed class of the tyres.

Note! Maximum permitted speeds indicated.

<table>
<thead>
<tr>

New tyres

Tyres are perishable. After a few years they begin to harden at the same time as the friction capacity/characteristics gradually deteriorate. Therefore aim to get as fresh tyres as possible when you replace them. This is especially important with regard to winter tyres. The week and year of manufacture, the tyre’s DOT marking (Department of Transportation), are stated with four digits, for example 1502. The tyre in the illustration was manufactured in week 15 of 2002.

Tyre age

All tyres older than six years should be checked by an expert even if they seem undamaged. The reason for this is that tyres age and decompose, even if they are hardly ever or never used. The function can therefore be affected due to the tyre’s constituent materials being broken down. In such a case the tyre should then not be used. This also applies to spare tyres, winter tyres and tyres saved for future use. Examples of external signs which indicate that the tyre is unsuitable for use are cracks or discoloration.

The age of the tyre can be determined by the DOT marking, see illustration above.
More even wear and maintenance

The correct tyre pressure results in more even wear, see page 154. To achieve the best traction and more even wear on the tyres, the regular switching of the front and rear tyres with each other is recommended. The first change should be after 5000 km and then at intervals of 10000 km, this is to avoid differences in tread depth. Tyres with the greatest tread depth should always be fitted to the rear wheels to decrease the risk of skidding. Contact an authorised Volvo workshop if you are uncertain about tread depth.

Wheels should be stored lying down or hanging up, and not standing up.

Tyres with tread wear indicators

Tread wear indicators are narrow treadless bands across the width of the tread. On the side of the tyre are the letters TWI (Tread Wear Indicator). When the tyre’s tread depth is down to 1.6 mm, the tread depth will be level in height with the tread wear indicators. Change to new tyres as soon as possible. Remember that tyres with little tread depth provide very poor grip in rain and snow.

Winter tyres

Volvo recommends winter tyres with particular dimensions. These are stated on the tyre pressure label, see page 153 for its location. The tyre dimensions are dependent on the engine variant. When driving on winter tyres, these must be fitted to all four wheels.

NOTE

Ask a Volvo dealer which rim and tyre types are most suitable.

Studded tyres

Studded winter tyres should be run in gently for 500–1000 km so the studs settle properly into the tyre. This gives the tyre, and especially the studs, a longer lifespan.

NOTE

The legal provisions for the use of studded tyres vary from country to country.

Tread depth

Road conditions with ice, slush and low temperatures place considerably higher demands on tyres than summer conditions. It is therefore not recommended to drive on winter tyres that have a tread depth of less than four mm.

Snow chains

Snow chains may only be used on the front wheels. This also applies to all-wheel-drive cars.

Never drive faster than 50 km/h with snow chains. Avoid driving on bare ground as this wears out both the snow chains and tyres. Never use quick-fit snow chains as the space between the brake discs and the wheels is too small.

IMPORTANT

Use Volvo genuine snow chains or equivalent chains designed for the correct car model, and tyre and rim dimensions. Consult an authorised Volvo workshop.
07 Wheels and tyres

**General**

**Summer and winter wheels**

When summer and winter wheels are changed they should be marked with which side of the car they were mounted on, for example L for left and R for right. Tyres with a tread pattern which are designed to only turn in one direction have the direction of rotation marked with an arrow. The tyre should always rotate in the same direction throughout its lifespan. Tyres should only be switched between front and rear positions, never between left and right-hand sides, or vice versa. If the tyre is mounted incorrectly, the car’s braking characteristics and capacity to force rain, snow and slush out of the way are adversely affected. Tyres with the greatest tread depth should always be fitted to the rear of the car (to decrease the risk of skidding.) Contact an authorised Volvo workshop if you are uncertain about tread depth.

The arrow shows the tyre's direction of rotation
153

07 Wheels and tyres

Tyre pressure

Recommended tyre pressure

The tyre pressure label on the driver’s side door pillar shows which pressures the tyres should have at different loads and speed conditions.

Stated on the decal:
- Tyre pressure for the car’s recommended wheel size
- ECO pressure
- Spare wheel pressure (Temporary Spare).

Checking the tyre pressure

Check the tyre pressure regularly.

**NOTE**

Tyre pressure decreases over time, this is a natural phenomenon. Tyre pressure also varies depending on ambient temperature.

Even after several kilometres of driving the tyres warm up and the pressure increases, so air must not be released if the pressure is checked when the tyres are warm, while the pressure must be increased if it is too low. Inadequately inflated tyres increase fuel consumption, shorten tyre lifespan and impair the car’s roadholding. Driving on tyres with tyre pressure that is too low can also result in the tyres overheating and disintegrating.

For information on the correct tyre pressure, refer to the tyre pressure table on page 154. (*Cold tyres* means the tyres are the same temperature as the ambient temperature.)

Fuel economy, ECO pressure

At speeds under 160 km/h, the general tyre pressure for full load is recommended in order to obtain optimum fuel economy.

Tyre pressure affects travelling comfort, road noise and steering characteristics.

1 In certain countries there is the “bar” unit beside the SI unit “Pascal”: 1 bar = 100 kPa (270 kPa = 2.70 bar)

2 ECO pressure, see page 153
07 Wheels and tyres

Warning triangle and spare wheel

Warning triangle

Follow the regulations in force for the use of a warning triangle
1 in the country in which you are driving.

Use the warning triangle as follows:

– Detach the warning triangle case. It is held in place with a Velcro strap.
– Remove the warning triangle from its case (A).
– Fold out the four support legs on the warning triangle.
– Fold out both red sides of the warning triangle. Place the warning triangle in a location that is appropriate for the traffic situation.

After use:

– Pack everything in reverse order.

Make sure that the warning triangle with case is securely fastened in the compartment.

Spare wheel Temporary Spare

The spare wheel
2 is only intended to be used for the short time it takes to get the normal wheel replaced or repaired. Replace the spare wheel as soon as possible with a normal wheel. The car’s handling may be altered by the use of the spare wheel.

By law, it is only legal to use the spare wheel/tyre temporarily in connection with damage to a tyre. A wheel/tyre of this type should be replaced with a normal wheel/tyre as soon as possible.

Remember also that this tyre combined with the normal tyres will affect driving characteristics. On four wheel drive vehicles excess speed may also damage the transmission.

Never drive faster than 80 km/h with a spare wheel on the car.

1 Certain countries.

2 Certain variants and markets

07

IMPORTANT

The car must never be driven fitted with more than one "Temporary Spare" wheel.
07 Wheels and tyres

Warning triangle and spare wheel

Spare wheel – removing

The spare wheel is located under the car. The jack\(^1\), tool kit\(^1\) and crank are located under the floor hatch. The crank is in two parts. One part is in the tool kit, and the other is under the tool kit.

The location of the jack depends on whether the car seats seven (1) or five (2).

\(^1\) Certain variants and markets

Proceed as follows to release the spare wheel:

- Lower the bottom of the tailgate and lift up the floor hatch in the cargo area.
- Take the two parts of the crank and assemble.
- Fit the crank in the winch.
- Loosen the tyre by cranking anticlockwise until you reach the stop.
- Release the wheel from the cable and wind up the cable clockwise.

\(\text{NOTE}\)

There is a puller spanner in the tool kit to remove the hub cap (certain wheel options).

\(\text{NOTE}\)

The cable could damage the car if it hangs free while driving.

- Place the punctured tyre in the cargo area. The tool kit contains a plastic bag for the tyre.
Spare wheel – refitting

It is best to have two people put the spare wheel back in place. One person to crank and the other to guide the wheel.

- Crank out the cable and place its anchor in the centre hole of the wheel.
- Slowly crank (clockwise) the cable in a bit.
- Angle the wheel so that it comes in over the exhaust system.
- Hold down the rear edge of the wheel while cranking it in.
- Place the wheel above the rear axle, against the floor.
- Crank to the stop point.
- Check that the wheel is properly secured.

**NOTE**

The spot under the car is only intended for the car’s original spare wheel. Do not place any other wheels there.

**WARNING**

Check that the right mounting points are being used. A production anchorage with pin is located between the jacking points. This is not strong enough to use to lift the car. If you are unsure about the location of the jacking points, contact an authorised Volvo workshop. An incorrectly fitted jack could damage the door and body.
Changing wheels

Removing wheels

- Remember to set out the warning triangle if you must change a wheel in a trafficked area. There are two jacking points on each side of the car, centred under the bottom of the doors.
- Park the car on an even, firm surface with no incline.
- Apply the parking brake and engage 1st gear (manual gearbox) or move the gear selector to the P position (automatic gearbox). Place chocks on either side of the wheels remaining on the ground - use stones or wooden blocks for example.
- Take out the jack, wheel brace and crank, see location page 156.

- Use the wheel brace to loose the wheel bolts ½-1 turn. Turn anticlockwise.
- Place the jack under the jacking point and crank it up towards the car floor. Check that the jack sits securely in the anchorage. Then adjust the jack so that its foot is positioned vertically under the anchorage. See illustration. Do not place wood blocks or the like under the jack as you will not achieve full bearing capacity.
- Lift the car until the wheel is free.
- Remove the wheel bolts and lift off the wheel.

WARNING
Never crawl under the car when it is raised on a jack! The car could fall, causing injuries. The car’s original jack should only be used when changing wheels. All other work on the car should be done using workshop jacks and axle stands under the part of the car that is raised. The jack screw should be kept well lubricated. If the surface is too soft, the jack could slide to the side and the car could fall. No one should be in the car when the wheel is being changed.

WARNING
If the jack is positioned incorrectly, the car could fall. Risk of injury.
Fitting the wheel
- Clean the contract surfaces on the wheel and hub.
- Fit the wheel. Screw the wheel nuts.
- Lower the car so that the wheel cannot rotate.
- Tighten the wheel bolts alternately and in torque steps. Tightening torque: 140 Nm (14.0 kpm). It is important that they are tightened to the correct torque. Check with a torque wrench.
- Screw the jack all the way down before returning it to the cargo area. Then secure it in place.
- Check that the new tyre has the correct amount of pressure.

**NOTE**
There are two different types of wheel bolts depending on whether or not your car has steel or aluminium rims; bolts used with aluminium rims have a loose, rotating ring. Bolts used with steel rims have no rotating ring.

Make sure to use the correct type of bolt. If you are unsure, check with the nearest Volvo workshop.

**IMPORTANT**
If TPMS is specified then the tyres must be calibrated after fitting. Read "Adjusting tyre pressure", see page 160.
07 Wheels and tyres

Tyre pressure monitoring (option)

**General**

Tyre pressure monitoring, TPMS (Tyre Pressure Monitoring System) warns the driver when the pressure is too low in one or more of the car’s tyres. It uses sensors located inside the air valve in each wheel. When the car is driven at approximately 40 km/h the system detects the tyre pressure. If the pressure is too low then a warning lamp on the instrument panel illuminates and a message is shown on the display.

Always check the system after changing a wheel in order to ensure that replacement wheels work with the system.

For information on correct tyre pressure, see page 153 and 154.

The TPMS system does not replace normal tyre maintenance.

**Adjusting tyre pressure monitoring**

Tyre pressure monitoring can be adjusted in order to follow Volvo’s tyre pressure recommendations, when driving with a heavy load for example.

1. Inflate the tyres to the required pressure.
2. Select key position I or II.
3. Turn the thumbwheel on the left-hand stalk switch until the text **TYRE PRESSURE CALIBRATION** is shown on the display.
4. Press and hold the **RESET** button until the text **TYRE PRESSURE CALIBRATED** is shown.

**Rectifying low tyre pressure**

When the message LOW TYRE PRESS. CHECK TYRES is shown on the display:

1. Check the tyre pressure in all four tyres.
2. Inflate the tyre(s) to the correct pressure.
3. Drive the car for at least 1 minute in total at a minimum of 40 km/h and check that the message disappears.

**Deactivating tyre pressure monitoring**

1. Key position I or II.
2. Turn the thumbwheel on the left-hand stalk switch until the text **TYRE PRESS. SYST ON** is shown on the display.
3. Press and hold the **RESET** button until the text **TYRE PRESS. SYST OFF** is shown.

To reactivate the system repeat the same steps 1–3, so that **TYRE PRESS. SYST ON** is shown on the display.

**Recommendations**

Only factory fitted wheels are equipped with TPMS sensors in the valves.

- The temporary spare wheel does not have this sensor.
- Volvo recommends that TPMS sensors are fitted to all wheels on the car (summer and winter wheels).
- Volvo recommends that sensors are not moved between different wheels.

**IMPORTANT**

If a fault should arise in the tyre pressure system a warning lamp on the instrument panel will illuminate. The message **TYRE PRESS. SYST SERVICE REQUIRED** will be shown. This can be for various reasons, e.g. fitting a wheel not equipped with a sensor adapted for Volvo’s tyre pressure monitoring system.
WARNING

When inflating a tyre equipped with TPMS, hold the nozzle of the pump directly against the valve to avoid damaging the valve.
Emergency puncture repair

General
The emergency puncture repair kit\(^1\) is used to seal the puncture and to check and adjust the tyre pressure. It consists of a compressor and a bottle with sealing fluid. The kit works as a temporary repair. The sealing fluid bottle must be replaced before its expiration date and after use.

The sealing fluid effectively seals tyres punctured in the tread.

\(^{1}\) Certain variants and markets.

WARNING
You must not drive faster than 80 km/h after the emergency tyre repair kit has been used. Contact an authorised Volvo workshop for inspection of the sealed tyre (maximum driving distance is 200 km). The staff there can determine whether or not the tyre can be repaired or if it needs to be replaced.

Taking out the emergency puncture repair kit
The emergency puncture repair kit with compressor and tools are found under the floor in the cargo area.

- Fold away the rear edge of the floor mat, forward from the back.
- Lift up the emergency puncture repair kit.

12 V sockets for the compressor are located by the centre console in the front, by the rear seat and in the cargo area. Choose the electrical socket that is nearest the punctured tyre.

NOTE
The emergency puncture repair kit is only intended for sealing tyres with a puncture in the tread.

NOTE
The jack is an option on cars equipped with emergency puncture repair kit.

The emergency puncture repair kit has limited abilities to seal tyres which have punctures in the wall of the tyre. Do not seal tyres with the emergency puncture repair kit if they have larger slits, cracks or similar damage.
Inflating the tyres

The car’s original tyres can be inflated by the compressor.

- The compressor must be switched off. Make sure that the switch is in position 0 and locate the cable and air hose.
- Unscrew the wheel’s dust cap and screw in the air hose valve connection to the bottom of the thread on the tyre’s air valve.
- Connect the cable to one of the car’s 12 V sockets and start the car.

**WARNING**

Inhaling car exhaust fumes can result in danger to life. Never leave the engine running in enclosed areas or areas that lack sufficient ventilation.

- Start the compressor by flicking the switch to position I.
- Inflate the tyre to the pressure specified on the tyre pressure decal. Release air using the pressure reducing valve if the tyre pressure is too high.

**IMPORTANT**

Risk of overheating. The compressor must not run for more than 10 minutes.

- Switch off the compressor. Detach the air hose and cable.
- Refit the dust cap.
Emergency puncture repair

Sealing punctured tyres

For information on the function of the parts, see the illustration on page 163.

– Open the lid of the emergency puncture repair kit.
– Detach the decal for maximum permitted speed and affix it to the steering wheel.
– Check that the switch is in position 0 and locate the cable and the air hose.
– Unscrew the orange cap and unscrew the bottle’s stopper.
– Screw the bottle into its holder.
– Unscrew the wheel’s dust cap and screw in the air hose valve connection to the bottom of the thread on the tyre’s air valve.
– Plug the cable into the 12 V socket and start the car.
– Flick the switch to position I.
– Inflate the tyre for 7 minutes.
– Switch off the compressor to check the pressure on the pressure gauge. Minimum pressure is 1.8 bar and maximum is 3.5 bar.
– Switch off the compressor and unplug the cable from the 12 V socket.
– Detach the hose from the tyre valve and fit the valve cap.
– As soon as possible, drive approximately 3 km at a maximum speed of 80 km/h so that the sealing fluid can seal the tyre.

WARNING

The sealing fluid can irritate the skin. In the case of contact with skin, wash away the fluid with soap and water.

NOTE

Do not unscrew the bottle, it is equipped with a reverse catch to prevent leakage.

WARNING

Do not break the bottle seal. The seal is broken when the bottle is screwed in.

NOTE

When the compressor starts, the pressure can increase up to 6 bar but the pressure drops after approximately 30 seconds.

NOTE

Never stand next to the tyre when the compressor is running. If cracks or unevenness arise then the compressor must be switched off immediately. The journey should not be continued. Contact an authorised tyre centre.

![Diagram](image)
07 Wheels and tyres

Emergency puncture repair

Rechecking the repair and pressure
- Reconnect the equipment.
- Read the tyre pressure on the pressure gauge.
- If it is below 1.3 bar then the tyre is insufficiently sealed. The journey should not be continued. Contact a tyre centre.
- If the tyre pressure is higher than 1.3 bar, the tyre must be inflated to the pressure specified on the tyre pressure decal. Release air using the pressure reducing valve if the tyre pressure is too high.
- Switch off the compressor. Detach the air hose and cable. Refit the dust cap.

**WARNING**
Do not unscrew the bottle, it is equipped with a reverse catch to prevent leakage.

- Return the emergency puncture repair kit to the cargo area.

**NOTE**
The sealing fluid bottle and hose must be replaced after use. Replacement must be performed by an authorised Volvo workshop.

**WARNING**
Check the tyre pressure regularly.

- Drive to the nearest authorised Volvo workshop for the replacement/repair of the damaged tyre. Advise the workshop that the tyre contains sealing fluid.

**WARNING**
You must not drive faster than 80 km/h after the emergency tyre repair kit has been used. Contact an authorised Volvo workshop for inspection of the sealed tyre (maximum driving distance is 200 km). The staff there can determine whether or not the tyre can be repaired or if it needs to be replaced.

**IMPORTANT**
Read the safety instructions on the bottom of the bottle.

Changing the sealing fluid canister
Replace the bottle when the expiration date has passed. Treat the old bottle as environmentally hazardous waste.

**WARNING**
Check the tyre pressure regularly.

- Drive to the nearest authorised Volvo workshop for the replacement/repair of the damaged tyre. Advise the workshop that the tyre contains sealing fluid.

**WARNING**
You must not drive faster than 80 km/h after the emergency tyre repair kit has been used. Contact an authorised Volvo workshop for inspection of the sealed tyre (maximum driving distance is 200 km). The staff there can determine whether or not the tyre can be repaired or if it needs to be replaced.

**IMPORTANT**
Read the safety instructions on the bottom of the bottle.
Cleaning .............................................................. 168
Touching up paintwork ......................................... 171
Rustproofing ....................................................... 172
CAR CARE
Cleaning

Washing the car

Wash the car as soon as it becomes dirty. Use car shampoo. Dirt and road salt can lead to corrosion.

- Do not park the car in direct sunshine. Washing a car with hot paintwork can cause permanent paintwork damage.
- Wash the car in a car wash with waste water separator.
- Thoroughly rinse dirt off the underbody of the car.
- Rinse the entire car to remove loose dirt.
  - When using a pressure washer: Make sure that the nozzle of the pressure washer is not closer than 30 cm to the bodywork. Do not spray directly at the locks.
- Wash using a sponge, car shampoo and plenty of lukewarm water.
- If the dirt is difficult to dislodge, wash the car using a cold degreasing agent.
- Dry the car using a clean, soft chamois or a water scraper.
- Clean the wiper blades with a lukewarm soap solution or car shampoo.

Removing bird droppings

Wash bird droppings off the paintwork as soon as possible. Bird droppings contain chemicals that affect and discolour paintwork very quickly. This discoloration can only be removed by a specialist.

Automatic car washes

An automatic car wash is a simple and quick way of washing the car, but it can never replace a proper handwashing. The brushes of an automatic car wash cannot reach everywhere.

Exterior plastic, rubber and trim components

A special cleaning agent available from Volvo dealers is recommended for cleaning coloured plastic parts, rubber and trim components, such as glossy trim mouldings. When using such a cleaning agent the instructions must be followed carefully.

Exterior plastic parts

A special cleaning agent, available from Volvo dealers, is recommended for cleaning exterior plastic parts. Never use strong stain removers.

WARNING

Always have the engine cleaned by a workshop. There is a risk of fire if the engine is hot.

NOTE

Outside lighting such as headlamps, fog lamps and rear lamps may temporarily have condensation on the inside of the lens. This is a natural phenomenon, all outside lighting is designed to withstand this. Condensation is normally vented out of the lamp when it has been switched on for a time.

Removing bird droppings

Wash bird droppings off the paintwork as soon as possible. Bird droppings contain chemicals that affect and discolour paintwork very quickly. This discoloration can only be removed by a specialist.

Automatic car washes

An automatic car wash is a simple and quick way of washing the car, but it can never replace a proper handwashing. The brushes of an automatic car wash cannot reach everywhere.

Exterior plastic parts

A special cleaning agent, available from Volvo dealers, is recommended for cleaning exterior plastic parts. Never use strong stain removers.

WARNING

Always test the brakes after washing the car, including the parking brake, to ensure that moisture and corrosion do not attack the brake pads and reduce braking performance.

IMPORTANT

Washing by hand is gentler to the paintwork than an automatic car wash. Paintwork is also more sensitive when it is new. For this reason, handwashing is recommended during the first few months with a new car.

Press the brake pedal lightly from time to time if driving for long periods in rain or slush. This heats and dries the brake pads. You should also do this when you begin driving in extremely damp or cold weather.

WARNING

Always have the engine cleaned by a workshop. There is a risk of fire if the engine is hot.

NOTE

Outside lighting such as headlamps, fog lamps and rear lamps may temporarily have condensation on the inside of the lens. This is a natural phenomenon, all outside lighting is designed to withstand this. Condensation is normally vented out of the lamp when it has been switched on for a time.

Removing bird droppings

Wash bird droppings off the paintwork as soon as possible. Bird droppings contain chemicals that affect and discolour paintwork very quickly. This discoloration can only be removed by a specialist.

A special cleaning agent available from Volvo dealers is recommended for cleaning coloured plastic parts, rubber and trim components, such as glossy trim mouldings. When using such a cleaning agent the instructions must be followed carefully.

Exterior plastic parts

A special cleaning agent, available from Volvo dealers, is recommended for cleaning exterior plastic parts. Never use strong stain removers.
Polishing and waxing
Polish and wax the car if the paintwork is dull or to give the paintwork extra protection.
The car does not need to be polished until it is at least one year old. However, the car can be waxed during this time. Do not polish or wax the car in direct sunlight.
Wash and dry the car thoroughly before you begin polishing or waxing. Clean off asphalt and tar stains using Volvo tar remover or white spirit. More stubborn stains can be removed using fine rubbing paste designed for car paintwork.
Polish first with a polish and then wax with liquid or solid wax. Follow the instructions on the packaging carefully. Many preparations contain both polish and wax.

Cleaning door mirrors and front door windows with water-repellent coating (option)
Never use products such as car wax, degreaser or similar on mirror/glass surfaces as this could ruin their water-repellent properties.
Take care when cleaning so as not to damage the glass surface.
To avoid damaging glass surfaces when removing ice – only use plastic ice scrapers.
There is natural wear of the water-repellent coating.

IMPORTANT
Avoid waxing and polishing on plastic and rubber.
Polishing glossy trim mouldings could wear away or damage the glossy surface. Polishing agent that contains abrasive must not be used.

IMPORTANT
Paint treatment such as preserving, sealing, protection, lustre sealing or similar could damage the paintwork. Paintwork damage caused by such treatment is not covered by Volvo warranty.

NOTE
Treatment with a special finishing agent available from Volvo dealers is recommended in order to maintain the water-repellent properties. This should first be used after three years and then each year.
Cleaning

Cleaning the interior

Treating stains on fabric upholstery
A special cleaning agent, available from Volvo dealers, is recommended for cleaning the fabric upholstery. Other chemicals can impair the fire retardant qualities of the upholstery.

**IMPORTANT**
Sharp objects and Velcro may damage the fabric upholstery.

Treating stains on leather upholstery
Volvo leather upholstery is chromium-free and approved in accordance with the Öko-Tex 100 standard.

The leather is refined and processed so that it retains its natural characteristics. It is given a protective coating, but regular cleaning is required in order to maintain both characteristics and appearance. Volvo offers a comprehensive product for the cleaning and treatment of leather upholstery which, when used in accordance with the instructions, preserves the leather’s protective coating.

After a period of use the natural appearance of the leather will nevertheless emerge, depending more or less on the surface texture of the leather. This is a natural maturing of the leather and shows that it is a natural product.

To achieve best results Volvo recommends cleaning and application of the protective cream once to four times per year (or more if required). Ask a Volvo dealer about Volvo’s Leather care product.

**IMPORTANT**
Never use strong solvents. Such products may damage fabric, vinyl and leather upholstery.

Washing instructions for leather upholstery
– Pour the leather cleaner on the dampened sponge and squeeze out a strong foam.
– Work the dirt away with gentle circular movements.
– Dab the sponge accurately on the stains. Allow the sponge to absorb the stain. Do not rub.
– Wipe off with soft paper or a cloth and allow the leather to dry completely.

Protective treatment of leather upholstery
– Pour a small amount of the protective cream on the felted cloth and massage in a thin layer of cream with gentle circular movements on the leather.
– Allow the leather to dry for 20 minutes before use.

The leather has now been given improved protection against stains and improved UV protection.

Treating stains on interior plastic, metal and wood parts
A special cleaning agent, available from Volvo dealers, is recommended for cleaning interior parts and surfaces. Do not scrape or rub stains. Never use strong stain removers.

Cleaning seatbelts
Use water and a synthetic detergent. A special textile cleaning agent is available from you Volvo dealer. Make sure the seatbelt is dry before allowing it to retract.

**IMPORTANT**
Sharp objects and Velcro may damage the fabric upholstery.

**IMPORTANT**
Never use strong solvents. Such products may damage fabric, vinyl and leather upholstery.

**IMPORTANT**
Note that materials with colour that runs when dry (new jeans, suede garments etc.) may discolour the upholstery material.
Paintwork

Paint is an important part of the car’s rust-proofing and should therefore be checked regularly. To avoid the onset of rust, damaged paintwork must be rectified immediately. The most common types of paintwork damage are stone chips, scratches, and marks on the edges of wings and doors.

Colour code

Data plate

It is important that the correct colour is used. The colour code number (1) is shown on the data plate, see page 234.

Stone chips and scratches

Before touching up paintwork, the car must be clean and dry and at a temperature above 15 °C.

Materials

- Primer in a can
- Paint in a can or touch-up pen
- Brush
- Masking tape

Minor stone chips and scratches

If the stone chip has not penetrated to the bare metal and there is an undamaged colour coat, you can paint straight after cleaning the damaged area.

If the stone chip has penetrated to the bare metal

- Fasten a piece of masking tape over the damaged surface. Then remove the tape, removing any paint residue.
- Stir the primer well and apply using a fine brush or matchstick. Apply paint using a brush once the primer is dry.
- For scratches, proceed as above, but mask around the damaged area to protect the undamaged paintwork.
- After a few days, polish the touched-up areas. Use a soft rag and a small amount of lapping paste.
Rustproofing

Inspection and maintenance

Your car received a thorough and complete rustproofing at the factory. Parts of the body are made of galvanised sheet metal. The underbody is protected by a wear-resistant anti-corrosion compound. And, a thin, penetrating rustproofing fluid was sprayed into the members, cavities and closed sections.

Maintaining the car’s rustproofing.

- Keep the car clean. Hose down the underbody. If using a pressure washer, keep the nozzle at least 30 cm from the painted surfaces.
- Regularly check and touch-up the rustproofing treatment as necessary.

The car’s rustproofing does not normally require treatment for approximately 12 years. After that time, it should be treated at three year intervals. If the car requires treatment, consult an authorised Volvo workshop.
Volvo service programme

Before the car left the factory, it was thoroughly tested. It was checked again in accordance with Volvo Car Corporation regulations before it was handed over to you.

To keep your Volvo as safe and reliable as possible, follow the Volvo service programme specified in the Service and Warranty Booklet. Have an authorised Volvo workshop carry out service and maintenance work. Volvo workshops have the personnel, special tools and service literature to guarantee the highest quality of service.

Special service measures

Certain service measures, which affect the car’s electrical system, can only be performed using electronic equipment specially developed for your car. Always contact an authorised Volvo workshop before beginning or performing service work that affects the electrical system.

Installing accessories

The incorrect connection and installation of accessories can negatively affect the car’s electrical system. Certain accessories only function when the appropriate software has been programmed into the car’s electrical system. Always contact an authorised Volvo workshop before installing accessories which are connected to or affect the electrical system.

Recording vehicle data

One or more of the computers in your Volvo are capable of recording detailed information. This information is intended for use in research to enhance safety and for diagnosing faults in some of the in-car systems. The data may include details regarding seatbelt use by the driver and passengers, the functions of various vehicle systems and modules, and status information about the engine, throttle, steering, brakes and other systems. This data can also include details of the way the car is driven. This type of information can include, without being limited to, specific details such as vehicle speed, the use of the brake and accelerator pedals and steering wheel position. This latter type of data can be stored for a limited period while the car is being driven and subsequently during a collision or a near-collision. Volvo Car Corporation will not disclose the stored information without consent. However, Volvo Car Corporation may be forced to disclose the information due to national legislation. Volvo Car Corporation and authorised Volvo workshops may also read and use the information.

IMPORTANT
For the Volvo warranty to apply, check and follow the instructions in the Service and Warranty Booklet.

176
09 Maintenance and service

Before starting work on the car

Battery
Check that the battery cables are correctly connected and tightened.

Never disconnect the battery when the engine is running (e.g. if replacing the battery).

Never use a quick charger to charge the battery. The battery cables must be disconnected when charging the battery.

The battery contains acid that is both corrosive and toxic. Handle the battery in an environmentally-suitable way. Let your Volvo dealer assist you.

Check regularly
Check the following at regular intervals, for example, when refuelling:

- Coolant – The level must be between the MIN and MAX marks on the expansion tank.
- Engine oil – The level must be between the MIN and MAX marks.
- Power steering fluid – The level must be between the MIN and MAX marks.
- Washer fluid – The reservoir should be well filled. Use washer antifreeze at temperatures around freezing.
- Brake and clutch fluid – The level must be between the MIN and MAX marks.

Lifting the car

If the car is lifted with a workshop jack; position the jack with the front edge on the subframe.

Do not damage the splashguard under the engine. Ensure that the jack is positioned so that the car cannot slide off. Always use axle stands or the like.

If you lift the car using a two pillar workshop lift, ensure that the front and rear lift arms are fixed under the lifting points on the door sill. See the illustration.

WARNING
High voltage output from the ignition system. The voltage in the ignition system is dangerous. The ignition must therefore always be switched off for work in the engine compartment.

Do not touch the spark plugs or ignition coils when the ignition is on or the engine is hot.

WARNING
Bear in mind that the radiator fan may start automatically some time after the engine has been switched off.

Always have the engine cleaned by a workshop. There is a risk of fire if the engine is hot.
**Opening the bonnet**

- Pull the handle on the far left (or right if the car is RHD) under the instrument panel. You will hear when the lock releases.
- Insert your hand to the right under the front edge of the bonnet (below the grille).
- Press up the safety catch handle.
- Release the handle and open the bonnet.

**WARNING**

Check that the bonnet locks properly when closed.

**WARNING**

Close the bonnet by placing your hand on its top and pressing down. Do not close it by holding the grille. Engine components on the inside could injure your fingers.

**Engine compartment**

1. Clutch and brake fluid reservoir
2. Relay and fuses
3. Air filter. (The cover has a different design depending on engine variant.)
4. Radiator
5. Engine oil dipstick
6. Engine oil filling
7. Washer fluid reservoir
8. Power steering fluid reservoir
9. Expansion tank, cooling system
10. Chassis data plate
11. Battery (in cargo area)
Fuel system

Diesel engines are sensitive to contaminants. Only use diesel fuel from a well-known producers. Never use diesel of dubious quality, see page 242. Special diesel fuel designed for low temperatures around freezing point is also available from the major oil companies. This fuel is less viscous at low temperatures and reduces the risk of paraffin precipitate. The risk of condensation in the fuel tank is reduced if the tank is kept well filled. When refuelling, check that the area around the fuel filler pipe is clean. Avoid spilling fuel onto the paintwork. Wash off any spillage with detergent and water.

**IMPORTANT**

Only ever use fuel that fulfils the European diesel standard, see page 242.

**IMPORTANT**

Diesel type fuels which must not be used: special additives, Marine Diesel Fuel, fuel oil, RME\(^1\) (Rape Methyl Ester) and vegetable oil. These fuels do not fulfil the requirements in accordance with Volvo recommendations and they generate increased wear and engine damage not covered by the Volvo warranty.

\(^1\) Diesel fuel may contain a certain amount of RME, but further amounts must not be added.

Draining condensation from the fuel filter

The fuel filter separates condensation from the fuel. Condensation can disrupt engine operation. The fuel filter must be drained at the intervals specified in the Service and Warranty Booklet or if you suspect that the car has been filled with contaminated fuel.

**IMPORTANT**

Certain special additives remove the water separation in the fuel filter.

**Empty tank**

No special procedures are required if the tank is run dry. The fuel system is bled automatically if the ignition switch is kept in position II for approx. 60 seconds before the start attempt.
Checking the engine oil and oil filter
Volvo recommends Castrol oil products. Change the oil and replace the oil filter in accordance with the intervals specified in the Service and Warranty Booklet.

**IMPORTANT**
In order to fulfil the requirements for the engine's service intervals all engines are filled with a specially adapted synthetic engine oil at the factory. The choice of oil has been made very carefully with regard to service life, starting characteristics, fuel consumption and environmental impact. An approved engine oil must be used in order that the recommended service intervals can be applied. Only use a prescribed grade of oil (see the engine compartment decal) for both filling and oil change, otherwise you will risk affecting service life, starting characteristics, fuel consumption and environmental impact. Volvo Car Corporation disclaims all warranty liability if engine oil of the prescribed grade and viscosity is not used.

Volvo uses different systems for warning of low oil level or low oil pressure. Certain variants have an oil pressure sensor, and then a lamp is used for oil pressure. Other variants have an oil level sensor, and then the driver is informed via the warning symbol in the centre of the instrument unit as well as by display texts. Certain models have both variants. Contact an authorised Volvo dealer for more information.

Checking the oil level in a new car is especially important before the first scheduled oil change. The Service and Warranty Booklet specifies the odometer readings for oil changes.

Volvo recommends checking the oil level every 2 500 km. The most accurate measurements are made on a cold engine before starting. The measurement will be inaccurate if taken immediately after the engine is switched off. The dipstick will indicate that the level is too low because the oil has not had time to flow down into the oil sump.

---

**Engine compartment decal for oil grade**
Using oil of a higher than specified grade is permitted. Volvo recommends using an oil of a higher grade than that specified on the decal for adverse driving conditions. See page 238.

**IMPORTANT**
Always use oil of the prescribed grade, see the engine compartment decal. Check the oil level frequently and change the oil regularly. The engine will be damaged if lower grade oil is used or if the car is driven with the oil level too low.
Checking the oil

The oil level must be within the area marked on the dipstick.

Checking the oil in a cold engine:
- Wipe the dipstick clean before checking the level.
- Check the oil level using the dipstick. The oil level must be between the MIN and MAX marks.
- If the level is close to the MIN mark, start by topping up with 0.5 litres of oil. Top up until the oil level is nearer the MAX than the MIN mark on the dipstick. See page 238–239 for capacities.

Checking the oil in a warm engine:
- Park the car on a level surface, switch off the engine and wait 10–15 minutes to allow the oil time to run back to the sump.
- Wipe the dipstick clean before checking the level.
- Check the oil level using the dipstick. The oil level must be between the MIN and MAX marks.
- If the level is close to the MIN mark, start by topping up with 0.5 litres of oil. Top up until the oil level is nearer the MAX than the MIN mark on the dipstick. See page 238–239 for capacities.

WARNING
Do not spill oil onto the hot exhaust manifold due to the risk of fire.

IMPORTANT
Never fill above the MAX mark. Oil consumption may increase if too much oil is poured into the engine.

Washer fluid, topping up

Location of washer fluid reservoir.

The windscreen and headlamp washers have the same reservoir. Add frost protection in the winter so that the fluid does not freeze in the pump, reservoir and hoses. See capacities on page 240.

NOTE
TIP! Clean the wiper blades when topping up washer fluid. Mix the washer antifreeze with water before filling the reservoir.
09 Maintenance and service

Oils and fluids

Checking and topping up the coolant

When topping up the coolant, follow the instructions on the packaging. It is important that the mixture of coolant concentrate and water is correct for the prevailing weather conditions. Never top up with water only. The risk of freezing increases with both too little and too much coolant concentrate.

--- IMPORTANT ---
Always use coolant with anti-corrosion agent as recommended by Volvo. New cars are filled with coolant that can withstand temperatures down to approximately –35 °C.

See capacities on page 240.

Check the coolant regularly

The level should lie between the MIN and MAX marks on the expansion tank. If the system is not filled sufficiently, high local temperatures could occur, causing a risk of damage (cracks) to the cylinder head. Top up the coolant when the level falls to the MIN mark.

--- WARNING ---
The coolant may be very hot. If the coolant requires topping up when the engine is at operating temperature, unscrew the expansion tank cap slowly to gently release the overpressure.

--- IMPORTANT ---
The engine must only be run with a well-filled cooling system. High temperatures can occur, causing a risk of damage (cracks) to the cylinder head.

Checking and topping up the brake and clutch fluid

The brake and clutch fluid have a common reservoir\(^1\). The fluid level must be between the MIN and MAX marks. Check the level regularly. Change the brake fluid every other year or at every other regular service.

See the capacities and recommended fluid grade on page 240.

The fluid should be changed annually on cars driven in conditions requiring hard, frequent braking, such as driving in mountains or tropical climates with high humidity.

--- IMPORTANT ---
Location dependent on whether car is left or right-hand drive.

\(^1\) Location dependent on whether car is left or right-hand drive.
Checking and topping up the power steering fluid

Check the level at every service. It is not necessary to change the fluid. The level must lie between the ADD and FULL marks. See the capacities and recommended grade on page 240.

WARNING
If the brake fluid is under the MIN level in the brake fluid reservoir, do not drive further before topping up the brake fluid. The reason for the loss of brake fluid must be investigated.

NOTE
Check the level frequently.

NOTE
If a fault should arise in the power steering system or if the car is without power and must be towed, it can still be steered. However the steering will be much heavier than normal and it will require more effort to turn the wheel.
**Wiper blades**

### Replacing the wiper blades

- Fold out the wiper arm and grasp the wiper blade.

**NOTE**

The wiper blades are different lengths. The blade on the driver’s side is longer than the blade on the passenger side.

- Press in the ribbed spring catch on the wiper blade while lifting it off at the arm extension.
- Fit the new blade in reverse order and check that it is properly secured.

### Replacing the wiper blades, rear window

- Fold out the wiper arm.
- Remove the wiper blade by moving it up/out (see illustration) towards the tailgate.
- Press the new wiper blade into position.
- Check that the blade is firmly installed.
Battery care

The service life and function of the battery is influenced by factors such as the number of starts, discharging, driving style, driving conditions and climatic conditions.

**NOTE**

An expended battery must be recycled in an environmentally responsible manner as it contains lead.

**WARNING**

Batteries can generate oxyhydrogen gas, which is highly explosive. A spark, which can be generated if you connect the jump leads incorrectly, is sufficient to make the battery explode. The battery also contains sulphuric acid, which can cause serious burns. If the acid comes into contact with eyes, skin or clothing, flush with large quantities of water. If acid splashes into the eyes, seek medical advice immediately.

**NOTE**

The life of the battery is shortened if it becomes discharged repeatedly.

Symbols on the battery

- Use protective goggles.
- Further information in the owner's manual.
- Store the battery out of the reach of children.
- The battery contains corrosive acid.
- Avoid sparks and naked flames.

Risk of explosion.
Battery

Changing the battery

Removing the battery

- Switch off the ignition and remove the key
- Unscrew the bracket and cover over the battery
- Wait at least 5 minutes before touching any electrical terminals. (This allows time for the information in your car’s electrical system to be stored in the control modules.)
- Disconnect the negative lead first
- Then disconnect the positive lead and the evacuation hose for the oxyhydrogen gas

Fitting the battery

- Set the battery in place
- Connect the positive lead
- Connect the negative lead
- Make sure the evacuation hose is correctly connected to both the battery and the outlet in the bodywork.
- Refit the cover and bracket
General
All bulb specifications are given on page 245. The following list contains bulbs and point-source lamps that are specialised or unsuitable for changing except at a workshop:
- General interior lighting in the roof.
- Reading lamps and glovebox lighting.
- Indicator, door mirror and approach lighting.
- High-level brake light.
- Active Bi-Xenon and Bi-Xenon headlamps.

### WARNING
On cars with Bi-Xenon headlamps, Xenon lamp replacement must be carried out by an authorised Volvo workshop. The headlamps must be handled with extreme care due to the high-voltage unit in the Xenon lamp.

### IMPORTANT
Never touch the bulbs’ glass with your fingers. Grease and oils from your fingers are vaporised by the heat, coating and damaging the reflector.

### Changing front bulbs
The entire lamp insert must first be removed when replacing dipped beam, main beam and parking lamp bulbs. To replace one of these bulbs, do the following and then consult the instructions for the specific lamp.

**Removing the lamp housing:**
- Switch off all lights and turn ignition key to position 0.
- Open the bonnet.
- Release the insert by pulling up the two lock pins holding it in place.
- Lift the insert straight out.
Replacing bulbs

- Unplug the connector by first pressing in the catch from underneath and then pulling it up a bit from above.
- Lift out the entire headlamp insert and place it on a soft surface so as not to damage the lens.

IMPORTANT
Do not pull the electrical cable, only the connector.

Refit the headlamp insert in reverse order. Check that the lock pins are correctly situated.

Location of bulbs in front lamp

1. Dipped beam
2. Main beam
3. Direction indicator
4. Parking/position lamps
5. Side marker lamps

Dipped beam, halogen

- Undo the outer cover by turning it anticlockwise.
- Unplug the connector.
- Disconnect the spring clamp. First push to the right so that the spring clamp disconnects, then out and down.
- Pull out the lamp.
- Fit the new bulb. It can only be fitted in one position.
- Press the clamp spring upwards and a little to the left so that it secures in its catch.
- Press the connector back in place.
- Screw the cover back into place; the marking HAUT should be at the top.
Replacing bulbs

Main beam

Halogen and Bi-Xenon headlamps
- Undo the outer cover by pulling it straight out and then unplug the connector.
- Disconnect the spring clamp. First push to the right so that the spring disconnects and then out and down.
- Pull out the lamp.
- Fit the new bulb. It can only be fitted in one position.
- Press the clamp spring upwards and a little to the left so that it secures in its catch.
- Press the connector back in place and refit the cover.

Active Bi-Xenon headlamps
- Switch off all lights and turn ignition key to position 0.
- Remove the cover.
- Turn the bulb anticlockwise and pull it out.
- Undo the connector by pressing the catch out and then pulling.
- Plug the connector into the bulb, a click is heard.
- Refit the bulb, turn it in position.
- Refit the cover.

Side marker lamps and position/parking lamps
The bulbs are housed in bayonet holders.
- Turn the bulb holder anticlockwise and remove.
- Pull the bulb straight out.
- Fit the new bulb by carefully pressing it into the recess.
- Fit the bulb holder back in place and turn clockwise.
Replacing bulbs

**Direction indicators**

- The bulbs are housed in bayonet holders.
- Turn the bulb holder anticlockwise and remove.
- Press in the bulb, turn anticlockwise and remove.
- Fit the new bulb by pressing it into the recess and then turning clockwise.

**Fog lamps**

- Switch off all lights and turn the ignition key to position 0.
- Turn the bulb holder slightly anticlockwise.
- Remove the lamp.
- Put the new bulb in place. The profile of the bulb holder matches the one on the foot of the lamp.
- Refit the bulb holder by turning slightly clockwise. The **TOP** mark on the bulb holder must be upward.

**Bulbs in rear lamp cluster**

1. Position lamps
2. Direction indicators
3. Reversing lamp
4. Position lamps
5. Brake light

**NOTE**

If the error message BULB FAILURE/ CHECK STOP LAMP remains after a faulty bulb has been replaced then consult an authorised Volvo workshop.
Bulb replacement

- Switch off all lights and turn ignition key to position 0.
- Lower the bottom of the tailgate and open the floor hatch. (If the car is equipped with a grocery bag holder (option), undo the holder’s retaining straps.)
- Remove the corner piece (A).
- Open the hatch (B) in the side panel by pulling the catch (C) up and towards you.
- Take spanner no. 10 out of the tool kit and undo the nuts (D).
- Pull the entire insert straight back.
- Loosen the extra length of cable for better accessibility.

- Place the insert on a soft surface so as not to scratch the glass.
- Turn the bulb holder anticlockwise and pull it out.
- Turn the bulb anticlockwise to loosen it. (Applies to direction indicators, reversing lamps and brake lamps).
- Pull the bulb straight out. (Applies to position lamps).
- Replace the bulb.
- Refit the bulb holder in the recess and turn clockwise.
- Press back the extra length of cable.
- Refit the insert against the bolt holes. Press the insert into place.
- Tighten the nuts.
- Refit the side panel and corner piece.

Rear fog lamp

- Insert a slotted screwdriver as indicated by the arrow in the illustration.
- Prise out the lamp insert.
- Turn the bulb holder anticlockwise to loosen it.
- Turn the bulb anticlockwise and lift the bulb out.
- Replace the bulb.
Replacing bulbs

Number plate lighting

– Switch off all lights and turn the ignition key to position 0.
– Remove the screws with a screwdriver.
– Loosen the whole lamp housing carefully and pull it out.
– Replace the bulb.
– Refit the entire lamp housing and screw it into place.

Courtesy lighting

There is courtesy lighting under the instrument panel on the driver and passenger sides.
– Insert a screwdriver and gently turn so that the lens detaches.
– Remove the blown bulb.
– Fit a new bulb.
– Refit the lens.

Bulbs in the cargo area

– Insert a screwdriver and gently turn so that the lamp housing comes loose.
– Remove the blown bulb.
– Replace the bulb. Check that the bulb lights.
– Refit the lamp housing.
Replacing bulbs

Vanity mirror lighting

- Insert a slotted screwdriver at the side of the centre clip in the bottom edge of the mirror. Lift up so the centre clip releases.
- Slide the screwdriver from side to side so that the outer clips release.
- Lift out the mirror insert.
- Replace the bulbs.
- Refit the insert top edge first. Be sure that the upper clips are properly depressed before pressing the insert back.
All electrical functions and components are protected with a number of fuses to protect your car’s electrical system from damage by short-circuits or overloads.

Fuses are housed in four different locations in the car:
1. Relay/fuse box in the engine compartment.
2. Fuse box in the passenger compartment within the sound barrier on the driver’s side.
3. Fuse box in the passenger compartment at dashboard end on driver’s side.
4. Fuse box in cargo area.

If an electrical component or function does not work, this may be because the component’s fuse was temporarily overloaded and blew.
– Look in the fuse diagram to locate the fuse.
– Pull out the fuse and check from the side to see whether the curved wire has blown.
– If this is the case, replace it with a new fuse of the same colour and amperage.

There are a number of spare fuses in the cover on the end of the dashboard. There are also pliers which facilitate the removal and fitting of fuses.

If the same fuse blows repeatedly, there is a fault in the component. Contact an authorised Volvo workshop to have it checked.

INFOTAINMENT SYSTEM
Infotainment system

Infotainment is a system that integrates the audio system and phone functions. You can easily and conveniently use your Infotainment system by means of the joint control panel or the steering wheel keypad. The XC90 can be equipped with Dolby Surround Pro Logic II (Premium Sound), which offers an optimal sound experience very close to being there with a broad, natural sound profile.

The system also allows your passengers to use headphones (option) with separate sound sources.

Dolby Surround Pro Logic II

Dolby Surround Pro Logic II¹ distributes the two stereo audio channels to left, centre, right and rear speakers. This provides a more realistic sound quality than that provided by standard two-channel stereo.

¹ Premium Sound.
Audio controls

1. On/Off – Audio
2. Volume
3. CD – Shortcut
4. AM/FM shortcut button to switch between FM1, FM2 and AM
5. Display
6. ENTER – select in the menu, activate a selection or activate the phone from standby mode
7. On/Off/Standby – Phone
8. MY KEY – programmable shortcut key for your favourite function
9. SELECTOR – select sound source
10. SOUND – make sound settings
11. EXIT/CLEAR – scroll back in the menu, cancel a selection, put the phone in standby mode, or erase the previous character when entering text and numbers.
12. SIM card holder
13. Menu selection buttons
14. CD and CD changer eject
15. CD player and CD changer (option)
16. Station setting buttons/selecting CD changer position (1-6), number/character buttons for the phone and menu shortcuts
17. IR receiver for remote controls (option)
18. Seek/change tracks/stations or scroll forward and back when entering text and digits
**10 Infotainment system**

**Control panels, audio**

**Steering wheel keypad**

Audio – Phone

The four buttons at the bottom of the steering wheel keypad control both the radio and the phone. The function of the respective button depends on which system is active. The steering wheel keypad can be used to adjust volume, switch between preset stations and change CD tracks.

**Menus**

Some infotainment system functions are controlled via a menu system. The current menu level is shown at the top right of the display. Menu options are shown in the middle of the display.

- **MENU** leads to menu system. Up/down with the buttons (1) scrolls between menu options.
- **ENTER** selects or activates/deactivates a menu option
- **EXIT** goes back one step in the menu structure. A long press on **EXIT** will exit the menu system.

**Shortcuts**

Menu options are numbered and can also be selected directly with the keypad (1-9).

**My own shortcut button – MY KEY**

Use **MY KEY** to store a favourite function in the menu, e.g. **TP**.

- Select the function in the menu to be stored by holding **MY KEY** depressed for more than two seconds.
- When **MY KEY STORED** is shown in the display, the function has been stored.
- Activate the function by briefly pressing **MY KEY**.
Control panel with headphones socket

Headphones with an impedance of 16–32 ohm and sensitivity of 102 dB or higher are recommended for best sound reproduction.

Activating/deactivating

The control panel is activated with SEL when the audio system is active, and deactivated automatically when the audio system is deactivated, or by means of a long press on SEL.

Scroll/search forward and backward

A short press on scrolls between CD tracks or preset radio stations. A long press fast-winds CD tracks or searches radio stations automatically.

Limitations

The audio source (FM, AM, CD etc.) played back in the speakers cannot be controlled from the rear control panel.

RDS messages may not appear if the radio is playing back in the headphones while another audio source is playing back in the speakers.
10 Infotainment system

Control panels, audio

Remote control (option)

1. MEMORY – Stores searched radio stations. To store a station:
   – Press the MEMORY button
   – Select Preset using PRESET/DISC (5)
   – Confirm your selection using the Memory button
2. Volume
3. Seek/change tracks forward or back
4. SOURCE – switch sound source
5. PRESET/DISC – select CD changer position or preset radio station
6. AUTO – find and store the strongest stations
7. Function not available
8. Function not available
9. On/Off – Audio

– Direct the remote control towards the IR receiver (see illustration) that is located in the dashboard.

NOTE
The remote control contains AAA batteries (R03). If the remote control does not work, first try replacing the batteries.
10 Infotainment system

Audio system functions

On/Off switch – Audio

Press the POWER button (2) to switch the audio system on or off.

If the audio system is active when the ignition is switched off, it will re-activate automatically when the car is restarted.

Volume control

Turn the knob (3) clockwise or anticlockwise to raise or lower the volume respectively. The volume control is electronic and has no end position. Volume can also be raised (+) or lowered (-) using the steering wheel keypad.

Selecting the sound source

Press the AM/FM (4) button repeatedly to toggle between FM1, FM2 and AM. CD (1) activates the CD player/changer.

Turn SELECTOR (5) to toggle between the external AUX audio source and the internal FM1, FM2, AM, CD and CD changer audio sources.

AUX

The AUX input can be used for connecting an MP3 player for example.

- Control the volume with SELECTOR or up/down with the buttons (6). Finish with ENTER.

NOTE

Does not work for the steering wheel keypad.

NOTE

The audio quality may be impaired if the player is charged while the audio system is in AUX mode. In which case, avoid charging the player.

Sometimes the external AUX audio source can be heard at a different volume to the internal audio sources. If the audio volume of the external audio source is too high then the audio quality may be impaired. Prevent this by adjusting the input volume of the external audio source:

- Select AUX VOLUME in the menu and press ENTER.

IMPORTANT

The cover for the cup holders must be open when the connector is in the AUX input.

Input for external audio source (AUX) 3.5 mm

NOTE

The audio quality may be impaired if the player is charged while the audio system is in AUX mode. In which case, avoid charging the player.
Audio system functions

Optimum sound reproduction
The audio system is calibrated for optimum sound reproduction by means of digital signal processing.
This calibration takes into account loudspeakers, amplifiers, passenger compartment acoustics, listener position etc. for each combination of car model and audio system.
There is also a dynamic calibration that takes into account the level set for the volume control, radio reception and vehicle speed.
The controls that are explained in these operating instructions, e.g. Bass, Treble and Equalizer, are only intended for the user to be able to adapt the sound reproduction according to personal taste.

Audio settings

- Press the SOUND button (1).
- Press the SOUND button repeatedly until you come to the function you wish to set.
  Choose Bass, TREBLE, FADER, BALANCE, SUBWOOFER (option), CENTRE (option) or SURROUND (option).
- Use the SELECTOR knob (2) to adjust the level. The display shows a scale from min. to max. position. The middle indicates the normal position.

NOTE
The level for the centre speaker can only be adjusted if Dolby Pro Logic II (DPL II) or three channel stereo (3-CH) is selected in the menu. The level for Subwoofer can only be adjusted if Subwoofer is activated.

Programme type | Display shows
---|---
Bass | BASS
Treble | TREBLE
Balance between the left and right-hand speakers | BALANCE
Balance between the front and rear speakers | FADER
Level for bass speaker (option) | SUBWOOFER
Level for centre speaker (Premium Sound) | CENTRE
Level for surround sound (Premium Sound) | SURROUND
Surround

Surround settings\(^1\) govern the spatial perception of the sound. The settings, including activating and deactivating for each respective audio source, are made separately.

The \(\bigtriangledown\) symbol in the display indicates that Dolby Pro Logic II is active. There are three different settings for surround sound:

- PRO LOGIC II
- 3-CHANNEL
- OFF (two channel stereo)

Activating/deactivating surround sound

- Press MENU, scroll to Audio settings and press ENTER.
- Select SURROUND and press ENTER.
- Select Pro Logic II, 3 channel or Off and press ENTER.

\(\bigtriangledown\) Dolby Surround Pro Logic II is a trademark of Dolby Laboratories Licensing Corporation. Dolby Pro Logic II Surround System is manufactured under license from Dolby Laboratories Licensing Corporation.

Bass speaker – SUBWOOFER (option)

The bass speaker helps the system provide fuller sound and deeper bass.

- Select AUDIO SETTINGS in the menu and press ENTER.
- Select SUBWOOFER and press ENTER.
- A check in the box indicates that SUBWOOFER is activated.

Equalizer FR (certain models)

This function is used to fine-tune the sound from the front speakers.

- Select AUDIO SETTINGS in the menu and press ENTER.
- Select Equalizer FR and press ENTER.
- Use the menu selection buttons or the SELECTOR knob to set the level.
- Press ENTER to select the next frequency. You can select five frequencies.
- Press ENTER until you come to menu mode to save any changes.

Equalizer RR (certain models)

This function is used to fine-tune the sound from the rear speakers.

- Select AUDIO SETTINGS in the menu and press ENTER.
- Select Equalizer RR and press ENTER.
- Use the menu selection buttons or the SELECTOR knob to set the level.
- Press ENTER to select the next frequency. You can select five frequencies.
- Press ENTER until you come to menu mode to save any changes.

\(^1\) Certain models
Tuning

- Choose radio mode AM/FM1/FM2 using the SELECTOR knob (3) or the AM/FM button (1).
- A short press on the or button is used to search for the next strong station.
- Press one of the buttons again to search again.

Manually seek known frequency

- Hold the or button depressed. MAN is shown in the display. The radio scans slowly in the selected direction and increases tempo after a few seconds.
- Release the button when the desired frequency shows in the display.

- Frequency can be adjusted with a short press on one of the arrow keys, or .

Manual adjustment mode stays in effect five seconds after the last press.

Storing stations

To store a selected station under one of the station setting buttons 0-9 (2):

- Set the desired station.
- Press the button under which the station is to be stored and keep it depressed. The sound will disappear for a few seconds and STATION STORED will be shown in the display. The station is now stored.

You can store up to 10 stations each for AM, FM1 and FM2, i.e. a total of 30 stations.
AUTOSTORE – autostoring stations

1. AUTO (1) seeks out the ten strongest radio stations and stores them automatically in a separate memory. The function is especially useful in areas where the radio stations and their frequencies are unfamiliar.

Start autostoring
- Select wavelength using AM/FM.
- Hold AUTO (1) depressed until AUTOSTORING... appears in the display.

Once AUTOSTORING... disappears from the display, the stations are stored. The radio continues in Auto mode and AUTO appears in the display. The automatically stored stations can now be selected using the 0 - 9 buttons. If there is no station with an adequately strong signal then the display shows NO AST FOUND.

Cancelling automatic storage of stations
- Press EXIT.

Selecting an autostored preset
Allowing the radio to remain in Auto mode provides access to the autostored presets.
- Briefly press AUTO (1). AUTO appears in the display.
- Press one of the 0 - 9 buttons.
- The radio remains in Auto mode until it is exited by a brief press on AUTO (1), EXIT or AM/FM.

Scanning
SCAN (2) automatically searches for strong AM or FM stations. When a station is found, it is played for approx. eight seconds before scanning is resumed.

Activating/deactivating Scan
- Select wavelength using AM/FM.
- Press SCAN (2) to activate. SCAN appears in the display.
- Close using SCAN or EXIT.

Storing a station
A selected station can be stored as a preset while SCAN is active.
- Press one of the 0 - 9 buttons and hold it depressed until the message Station stored appears on the display.

RDS functions
Radio Data System – RDS links FM transmitters into a network. An FM transmitter in such a network sends information that gives an RDS radio the following functions:
- Automatically switches to a stronger transmitter if reception in the area is poor.
- Searches for programme form, such as traffic information or news.
- Receives text information on the current radio programme.

NOTE
Some radio stations do not use RDS or only a selected range of its functions.
Volume control – NEWS/TP/ALARM

If you do not wish to listen to a news item in progress:

- Press the EXIT button. The NEWS function remains active and the radio waits for the next news programme.

**TP Search**

This function allows you to listen to traffic information when travelling between different countries and states in Europe without needing to select a station.

- Select RADIO SETTINGS in the menu and press ENTER.
- Select TP and press ENTER.
- Select TP Search and press ENTER.

To deactivate the function, select TP Search again and press ENTER.

Radio text

Some RDS stations send information on programme content, artists, etc. This information can be indicated with text in the display.

- Press the MENU button.
- Select RADIO TEXT in the menu and press ENTER.
- Select RADIO TEXT again and press ENTER to deactivate.

Alarm

Alarms are transmitted automatically and the function cannot be deactivated. Alarm! is shown in the radio display when an alarm message is broadcast. This function is used to warn motorists of major accidents and catastrophes, such as a bridge collapse or an accident at a nuclear plant.

TP is shown in the display when this function is active. If the set station can send traffic information then TP! is shown in the display. Traffic information will only interrupt the sound source if TP! is shown in the display.

If you do not wish to listen to a traffic bulletin in progress:

- Press the EXIT button. The TP function remains active and the radio waits for the next traffic bulletin.

News – NEWS

This function interrupts other sound sources, e.g. CD, when a news broadcast starts.

- Choose radio mode using the SELECTOR knob or the AM/FM button.
- Select NEWS in the menu and press ENTER.
- NEWS appears in the display.
- Select NEWS again and press ENTER to deactivate the NEWS function.

With this function, programmes from RDS stations that are news-coded will interrupt other audio sources using the volume setting for this specific purpose. As soon as the news broadcast is finished, the audio system returns to the previous audio source and resumes the previous volume setting.

NOTE

If a CD for example is playing when the radio receives a traffic bulletin, the CD player is put in pause mode. The message is played at the volume selected for that type of message. Playback of the originally selected audio source is then resumed at the previous volume. If volume is adjusted while the bulletin is played, the new volume is saved and used for the next bulletin.

Traffic information – TP

This function interrupts other audio sources in order to broadcast traffic information from RDS stations. The message is heard at the volume set for this specific purpose. As soon as the message ends, the radio returns to the previous audio source and volume setting.

- Select TP in the menu and press ENTER.
- TP is shown in the display.
- Select TP again and press ENTER to deactivate the TP function.

If you do not wish to listen to a traffic bulletin in progress:

- Press the EXIT button. The TP function remains active and the radio waits for the next traffic bulletin.

NOTE

If a CD for example is playing when the radio receives a traffic bulletin, the CD player is put in pause mode. The message is played at the volume selected for that type of message. Playback of the originally selected audio source is then resumed at the previous volume. If volume is adjusted while the bulletin is played, the new volume is saved and used for the next bulletin.
Programme types – PTY
The PTY function can be used to select different programme types, such as Pop music and Serious classic. Use the PTY function to select from among the different programme types shown in the list below.

Display of programme type
- Select RADIO SETTINGS in the menu and press ENTER.
- Select PTY in the menu and press ENTER.
- Select SHOW PTY and press ENTER.
The PTY of the selected station is now shown in the display.

Searching for a specific programme type
This function helps you find programmes with a specific focus by searching the entire frequency band.
- Select FM 1 or FM 2 and press the MENU button.
- Select RADIO SETTINGS and press ENTER.
- Select PTY and press ENTER.
- Choose SELECT PTY and press ENTER.
- Press ENTER for one or more of the listed programme types you select. The PTY symbol in the display illuminates when the first selection is made and the radio continues in standby for PTY.
- Once you have selected all desired types, select EXIT/CLEAR to exit the PTY list.
- Select SEARCH PTY and press ENTER. If the radio finds a station with the selected programme type, it is played through the speakers.
- If the radio finds a station that is unsuitable, continue the search with the / buttons.
- If no stations with the selected programme type are found, the radio resumes its previous frequency. PTY then remains in standby mode until the selected programme type is broadcast, at which time the radio automatically switches to the station sending the selected programme type.
In order to deactivate PTY standby, enter the menu and select CLEAR ALL PTY. The symbol PTY disappears from the display and the radio resumes normal mode.

NOTE
Not all radio stations have a PTY designation.
10 Infotainment system

Radio functions

Traffic information – TP STATION
Here, you set from which station traffic information is to be heeded.
Note that TP must be shown in the display for this to work.

Activating/deactivating TP STATION
Listen to the station from which traffic information is to be heeded.
– Select RADIO SETTINGS in the menu and press ENTER.
– Select TP and press ENTER.
– Select SET CURRENT to activate or RESET CURRENT to deactivate and press ENTER.

News – NEWS STATION
Here, you set from which station news is to be heeded.
Note that the set station in question must be an RDS station for this to work.

Activating/deactivating NEWS STATION
Listen to the station from which news is to be heeded.
– Select RADIO SETTINGS in the menu and press ENTER.
– Select NEWS STATION and press ENTER.
– Select TP Station and press ENTER.
– Select SET CURRENT to activate or RESET CURRENT to deactivate and press ENTER.

Automatic frequency update – AF
The AF function selects one of the strongest transmitters for a set station. The radio may sometimes need to search through the entire FM wavelength to find a strong transmitter. If this occurs, the radio mutes and PI SEEK PRESS EXIT TO CANCEL appears in the display.

Activating/deactivating AF
– Select RADIO SETTINGS in the menu and press ENTER.
– Select AF and press ENTER.

To deactivate AF, select AF and press ENTER.

Regional radio programme – REG
This function causes the radio to continue with a regional transmitter even if its signal strength is low.
– Select RADIO SETTINGS in the menu and press ENTER.
– Select Regional and press ENTER.
– REG is shown in the display.
– To deactivate REG, select REG again and press ENTER.

Enhanced Other Networks – EON
The EON function is particularly useful in urban areas with many regional radio stations. It allows the distance between the car and the radio station transmitter to determine when programme functions should interrupt the current audio source.

• LOCAL – interrupts only if the radio station transmitter is close.
• DISTANT\(^1\) – interrupts if the station transmitter is far away, even if there is a lot of static.
• OFF – no interruption for programmes from other transmitters.

\(^1\) Default/factory settings.
Activating/deactivating EON
- Select RADIO SETTINGS in the menu and press ENTER.
- Select EON and press ENTER.
- Select LOCAL, DISTANT or OFF and press ENTER.

Resetting RDS functions
Resets all radio settings to the original factory settings.
- Select RADIO SETTINGS in the menu and press ENTER.
- Select RESET ALL and press ENTER.
- Press ENTER again to confirm.
10 Infotainment system

CD functions

Start playback (CD player)
If a music CD is in the player when the audio system is in CD mode then playback is started automatically. Otherwise, load a disc and change to CD mode using SELECTOR (4) or CD (1).

Starting playback (CD changer)
If a CD position with a music CD is already selected when the audio system is activated then playback starts automatically. Otherwise change to CD changer mode using SELECTOR (4) or CD (1) and select a disc with the number buttons 1-6.

Inserting a CD (CD changer)
- Select an empty position with the number buttons 1-6 or Up/Down on the navigation button.
An empty position is marked in the display. The text INSERT DISC shows that a new disc can be inserted. The CD changer can hold up to six CDs.
- Insert a CD into the CD changer slot (2).

CD eject
A CD will stay in the ejected position for max. 12 seconds. Following which it is re-inserted into the player and playback continues.

Single discs (CD player)
Eject single discs by pressing the eject button (3).

All discs (CD changer)
Eject all discs with a long press on the eject button. The entire magazine is emptied disc by disc. The message EJECTING ALL is shown in the display.

Pause
If the volume is turned down completely, the CD player is stopped. The player is restarted when the volume is increased.

Audio files (option)
Apart from normal music CDs, the CD player supports MP3 and WMA format audio files.

NOTE
Certain types of copy-protected audio files cannot be read by the player.

When a CD containing audio files is inserted into the player the disc’s directory structure is read in. It may take a while before playback starts depending on the quality of the disc.

Navigation and playback
If a disc containing audio files is inside the CD player then ENTER leads to the disc’s directory structure. The directory structure is navigated in the same way as the audio system’s menu structure. Audio files have the symbol and directories have the symbol . Before playback starts can be used to show the audio file’s name if the display is too narrow. Start playback of the selected audio file with ENTER.

When the playback of a file is finished the playback of the other files in the same directory continues. Directory change takes place automatically when all files in the current directory have been played back.
Fast-wind/change CD tracks and audio files
Short presses right/left on the \[\text{a} \text{a}\] buttons are used to scroll between CD tracks/audio files. Long presses are used to fast-wind CD tracks/audio files. The steering wheel keypad can also be used for this purpose.

Scan CD
This function plays the first ten seconds of each CD track/audio file. Press \text{SCAN} to activate. Interrupt with \text{EXIT} or \text{SCAN} to continue playback of the current CD track/audio file. Scan only works on the selected disc. The text \text{SCAN} is shown in the display when the function is active.

Activating/deactivating (CD player)
If a normal music CD is being played:
– Select RANDOM in the menu and press ENTER.
If a disc with audio files is being played:
– Select DISC or FOLDER in the menu and press ENTER.

Activating/deactivating (CD changer)
If a normal music CD is being played:
– Select Random in the menu and press ENTER.
– Scroll to SINGLE DISC or ALL DISCS and press ENTER.
The ALL DISCS option only applies to the music CDs in the changer.
If a CD with audio files is being played:
– Select SINGE DISC or FOLDER in the menu and press ENTER.
– Scroll to the required CD or folder and press ENTER.
When you select another CD the function is deactivated.

Different messages appear depending on which random function is active:
• RANDOM means that the tracks from only one music CD are played.
• RND ALL means that all tracks on all music CDs in the CD changer are played.
• RANDOM FOLDER means that the audio files in a directory on the current CD are played.

Disc text
If title information is stored on a CD then it can be shown in the display.

Activating/deactivating
Start CD playback.
– Select DISC TEXT in the menu and press ENTER.

CD discs
Using CD discs burned at home could result in poor or non-existent sound.

WARNING
Only use standard discs (12 cm in diameter). Do not use CDs with that have disc labels. The heat from the CD player could cause the label to come loose from the disc. The CD player could then be damaged.

¹ Certain models
² Option
Phone system components
Phone system components

1. Steering wheel keypad (option).
   You can control the majority of phone functions using the steering wheel keypad. When the phone is active, the steering wheel keypad can only be used for phone functions. When in active mode, phone information is always shown in the control panel display.

2. Microphone
   The handsfree microphone is integrated in the roof console beside the rearview mirror.

3. Centre console control panel
   All phone functions (except call volume) can be regulated via the control panel.

4. SIM card reader
   The SIM card is inserted into the front of the control panel.

5. Privacy handset (option)
   The privacy handset can be used when you do not wish to be disturbed.

6. Antenna
   The antenna is mounted against the windscreen, in front of the rearview mirror.

General

- Always put traffic safety first.
- If the driver needs to use the privacy handset, park the car in a safe place first.
- Switch off the phone system when refuelling the car.
- Switch off the system near blasting work.
- Only entrust phone system servicing to an authorised Volvo workshop.

Emergency calls

Emergency calls to alarm centres can be made without a SIM card as long as there is coverage by a GSM operator.
- Activate the phone.
- Ring the emergency number that applies to your region (within EU: 112).
- Press ENTER in the control panel or in the steering wheel keypad.
10 Infotainment system

**Phone functions (option)**

### Controls

1. **Display**
2. **ENTER** – accept a call, make a menu selection or activate the phone from standby mode
3. **On/Off/Standby**
4. **EXIT/CLEAR** – terminate/refuse a call, scroll back in the menu, cancel a selection or erase entered digits/characters
5. **SIM card holder**
6. **Menu selection buttons**
7. **Number/character buttons and menu shortcuts**
8. **Seek** – scroll forward or back when entering text and numbers
9. **Increase/decrease call volume during calls. The phone does not use the centre speaker**

### On/Off/Standby switch

To activate the system:
- Press the **PHONE** button (3) to activate the phone system.

To switch off the system:
- Hold the **PHONE** button depressed to switch off the phone system

Continuing with system in standby mode:
- The phone will continue in standby mode with a brief press of the **PHONE** button or if you press **EXIT/CLEAR**.
- Reactivate the system with the **PHONE** button.

When the phone is active or in standby mode, a handset is shown in the display.

### NOTE

With the Performance audio system (standard level), it is not possible to listen to the radio, CD or receive traffic messages during a phone call.

If you switch off the car’s ignition with the phone system on, it will be on the next time you switch on the ignition. No calls can be received when the phone system is switched off.

1 Option
Phone functions (option)

Volume reduction during phone call
If the phone rings when the radio is switched on, the volume is lowered when the call is answered. When the call is concluded, the volume returns to the previously set level. Radio volume can also be adjusted during a phone call, whereby the newly selected level will resume when the call is concluded. Audio system volume can also be switched off completely during a phone call, see page 231.

This function only applies to the Volvo integrated phone system.

Standby mode
In standby mode, you can receive calls while the audio system is active and information from audio system sources is shown in the display.

To use other functions of the phone system, the phone must be in active mode.

Menu shortcuts
Once you have used the menu button to enter the menu system, you can use numbers instead of the arrows and the ENTER button to select the right menu in the main menu level. Each menu selection is numbered. The numbers are shown in the display together with the menu alternative.

Traffic safety
For reasons of safety, parts of the phone menu system cannot be accessed at speeds in excess of 8 km/h. You may only complete menu system activities that have already been started.

The speed limiter can be disconnected using menu function 5.6.

SIM card
The phone can only be used with a valid SIM card (Subscriber Identity Module). Your network operator supplies this card.

Always insert the SIM card when you wish to use the phone.

– Switch off the phone.
– Open the SIM card holder with a short press.
– Insert the SIM card with the metallic surface down.
– Make sure that the bevelled corner of the SIM card matches the bevel of the holder.
– Press in the holder.

Contact your network operator if you experience difficulties with the SIM card.

Making and receiving calls
To call:

– Dial the number and press ENTER on the steering wheel or the control panel keypad (or lift the handset).

To receive an incoming call:

– Press ENTER or lift the handset. You can also use Automatic Answer. See page 230.

The car’s audio system can be muted automatically while a phone call is in progress, see page 231.

Ending a call

– Press EXIT/CLEAR on the steering wheel or control panel keypad or hang up the handset.

The audio system resumes its previous activity.

Refuse an incoming call by pressing EXIT/CLEAR.
Privacy handset

If you wish to speak without disruptions, use the privacy handset. Lift the handset by pressing briefly on the top (A).

- Select the desired phone number using the centre console keypad and lift the handset to place the call. Adjust the volume with the dial on the side of the handset.

The call is ended when you replace the handset in its holder.

If you wish to switch to handsfree without ending the call:

- Press on the steering wheel keypad (or control panel menu buttons) and select Handsfree.
- Press ENTER and replace the handset in its cradle. If the handset is already removed from its cradle when a call is started, the ringing party will be audible in the handsfree system.
- Press the MENU button, scroll to Handset and press ENTER in order to transfer to the handset.

Last dialled numbers
The phone automatically stores the last phone numbers/names called.

- Press ENTER in the steering wheel or control panel keypad.
- Use the menu buttons to scroll forward or back through the last numbers dialled. They are shown in the display.
- Press ENTER.

Speed dial

Storing speed dial numbers
A number stored in the phone book can be linked to a speed dial button (1–9).

Proceed as follows:

- Select Phone book in the menu and press ENTER.
- Scroll to Speed dial, (see page 230), and press ENTER.
- Select which number is to be the speed dial number. Press ENTER to confirm.
- Search for the desired name or phone number in the phone book. Press ENTER to select.

Using speed dial

- To make a call, press and hold the desired speed dial button for about two seconds or press the button briefly and then press ENTER.
- Once you switch on the phone, wait a moment before using speed dial.

NOTE
If you wish to use a speed dial number then Menu 3.3.1, (see page 230), must be activated.

Call waiting

If you hear two beeps in your speaker during a phone call, someone else is calling. This function can be selected or deselected in the menu.

In this mode, you can choose to either take the call or refuse it. If you do not wish to take the call, press EXIT/CLEAR or do nothing.
10 Infotainment system

Phone functions (option)

If you do wish to take the call, press ENTER. Your current call will be put in "park mode". If you press EXIT/CLEAR, both calls will be simultaneously terminated.

Functions during a call

The following functions are available during a call (scroll with the arrows and press ENTER to make a selection)

<table>
<thead>
<tr>
<th>Function</th>
<th>Option</th>
</tr>
</thead>
<tbody>
<tr>
<td>Secret mode</td>
<td>Secret mode off</td>
</tr>
<tr>
<td>Hold/Resume</td>
<td>Choose if the call is to be parked or resumed</td>
</tr>
<tr>
<td>Handset/Handsfree</td>
<td>Using the handset or handsfree</td>
</tr>
<tr>
<td>Phone book</td>
<td>Show phone book</td>
</tr>
</tbody>
</table>

The following functions are available when you have a current call and a parked call (scroll with the arrows and press ENTER to make a selection)

<table>
<thead>
<tr>
<th>Function</th>
<th>Option</th>
</tr>
</thead>
<tbody>
<tr>
<td>Secret mode</td>
<td>Secret mode off</td>
</tr>
<tr>
<td>Handset/Handsfree</td>
<td>Using the handset or handsfree</td>
</tr>
<tr>
<td>Phone book</td>
<td>Show phone book</td>
</tr>
<tr>
<td>Three-way calling</td>
<td>Speak with both parties simultaneously (conference call)</td>
</tr>
<tr>
<td>Switch</td>
<td>Switch between the two calls</td>
</tr>
</tbody>
</table>

Call volume

Increase or decrease call volume during calls by pressing the + or – buttons in the steering wheel keypad.

When the phone is activated, the steering wheel keypad only controls the phone functions.

The phone must be in standby mode in order to adjust the audio system with these buttons, see page 224.

Phone book

Phone numbers and names can be stored in either the phone memory or the SIM card memory.

If the number of the person calling is found in the phone book, his or her name is shown in the display.

The phone memory can store up to 255 names.

Storing phone numbers with names

- Press the MENU button, select Phone book and press ENTER.
- Scroll to Enter item and press ENTER.
- Enter a name and press ENTER.
- Enter a number and press ENTER.
- Choose in which memory to save and press ENTER.

Dialling from the memory

- Press the MENU button’s down arrow (1) or  in the steering wheel to search in the phone book.

Choose from the following alternatives:

- Press ENTER and scroll with the arrows until you find the desired name.
- Press the key for the first letter of the name (or enter the entire name) and press ENTER.
- Press ENTER to call the selected number.
Enter a name or message
Press the button with the desired character: once for the first character, twice for the second, etc. Press 1 to enter a space.

| 1 | space 1- ? ! . : " ' ( ) |
| 2 | a b c 2 ä å à æ ç |
| 3 | d e f 3 ë é |
| 4 | g h i 4 i |
| 5 | j k l 5 |
| 6 | m n o 6 ň ô ö Ø |
| 7 | p q r 7 ß |
| 8 | t u v 8 ü ū |
| 9 | w x y z 9 |
| * | Used if two characters are to be ended with the same button. |
| 0 | + 0 @ * # & $ £ / % |

EXIT Delete the last letter or number entered. If you press for a long time, the entire number and text is deleted.

Quitting text input:
- Clear all entered characters with a long press on the EXIT/CLEAR button.
- Return to the menu with an additional long press on the EXIT/CLEAR button.

Double SIM cards

Many network operators offer double SIM cards - one for your car and one for another phone. A double SIM card allows you to have the same number for two different phones. Ask your network operator about the offers available and the use of double SIM cards.

Specifications

| Output | 2 W |
| SIM card | small, 3 V |
| Memory entries | 255¹ |
| SMS | yes |
| Data/fax | no |
| Dualband | yes (900/1800) |

¹ The phone memory contains 255 positions. The number of SIM card memory positions varies depending on your subscription.

IMEI number

In order to block the phone, you must provide your network operator with the phone’s IMEI number which is a 15-digit serial number that is programmed in the phone. To display this number, press *#06#. Make a note of this number and keep it in a safe place.

Description of menu options

1. Call log
1.1. Missed calls
List of missed calls. Choose to call, erase or store the number in the phone book.

1.2. Received calls
List of received calls. Choose to call, erase or store the number in the phone book.

1.3. Outgoing calls
List of previously dialed numbers. Choose to call, erase or store the number in the phone book.

1.4. Erase list
Erase the lists found in the menus 1.1, 1.2 and 1.3 as below.
  1.4.1. All
  1.4.2. Missed
  1.4.3. Received
  1.4.4. Outgoing

1.5. Call duration
Duration of all calls or of the most recent call. The phone code is required to reset the call timer (see menu 5.4).
  1.5.1. Last call
  1.5.2. Number of calls
  1.5.3. Total time
  1.5.4. Reset time

2. Messages
2.1. Read
Received text messages. Select whether to erase, forward, change or save the entire message or parts of it.

2.2. Write
Write a message using the keypad. Choose whether to save or send it.

2.3. Message settings
Enter the number (SMSC number) of the message centre to which messages are to be transferred as well as how long they are to be saved at the message centre. Contact your network operator for information on message settings. Normally, these settings should not be altered.
  2.3.1. SMSC number
  2.3.2. Validity period
  2.3.3. Message type

3. Phone book
3.1. Enter item
Store names and phone numbers in the phone book, see page 226.

3.2. Search
Search for a name in the phone book.

11 Specifications

Knowing the car’s type designation, vehicle identification and engine numbers can facilitate all contact with a Volvo dealer regarding the car and when ordering spare parts and accessories.

1. Type designation, vehicle identification number, maximum permissible weights, codes for colour and upholstery and type approval number.

2. Engine type designation, component and serial number.

3. Decal for engine oil.

4. Gearbox type designation and serial number:
   a: Automatic gearbox AW
   b: Manual gearbox
   c: automatic gearbox

5. Decal for parking heater.

6. VIN number (type and model year designation plus chassis number).

Further information on the car is presented in the registration document.

Dimensions and weights

Weights

The kerb weight includes the driver, the fuel tank 90% full and all fluids. The weight of passengers and accessories, such as a towbar, towball load (when a trailer is hitched, see table), load carriers, and space box etc., influence the payload and must not be included in the kerb weight. Permitted weight (in addition to driver) = Gross vehicle weight − Kerb weight.

WARNING

The car’s driving characteristics change depending on how heavily it is loaded and how the load is distributed.

See decal location on page 234.

1. Max. total weight
2. Max. train weight (car+trailer)
3. Max. front axle load
4. Max. rear axle load

Maximum load: See registration document.

Maximum roof load: 100 kg

11 Specifications

Engine oil

Adverse driving conditions

Check the oil level more frequently for long journeys:
- towing a caravan or trailer.
- in mountainous regions.
- at high speeds.
- in temperatures colder than −30 °C or hotter than +40 °C.

This can produce abnormally high oil temperature or oil consumption.

Also check the oil level more often if the car is often driven short distances (less than 10 km) when temperatures are low (below +5 °C).

Choose a fully synthetic engine oil for adverse driving conditions. It provides extra protection for the engine.

Volvo recommends Castrol oil products.

! IMPORTANT

In order to fulfill the requirements for the engine’s service intervals all engines are filled with a specially adapted synthetic engine oil at the factory. The choice of oil has been made very carefully with regard to service life, starting characteristics, fuel consumption and environmental impact. An approved engine oil must be used in order that the recommended service intervals can be applied. Only use a prescribed grade of oil (see the engine compartment decal) for both filling and oil change, otherwise you will risk affecting service life, starting characteristics, fuel consumption and environmental impact. Volvo Car Corporation disclaims all warranty liability if engine oil of the prescribed grade and viscosity is not used.

Viscosity chart
Oil decal

When the oil decal shown alongside here is in the car’s engine compartment, the following applies. See location on page 234.

Oil grade: ACEA A5/B5
Viscosity: SAE 0W–30.

</tbody>
</table>

¹Weights can vary depending on the engine variant. Contact an authorised Volvo workshop for the exact information.

### IMPORTANT

The recommended transmission fluid must be used to prevent damage to the gearbox. Do not mix with any other transmission fluid. If the transmission is topped up with a different fluid, contact an authorised Volvo workshop for servicing.

### NOTE

Under normal driving conditions the gearbox oil does not need changing during its service life. However, it may be necessary under adverse driving conditions, see page 238.

\(^1\) Applies to the variant seating seven.
Fuel consumption and emissions of carbon dioxide

Official fuel consumption figures are based on a standard driving cycle in accordance with EU Directive 80/1268 comb. Fuel consumption figures may change if the car is equipped with extra equipment that affects the car’s weight. The manner in which the car is driven and other non-technical factors can also affect fuel consumption. Consumption is higher and power output lower for fuel with an octane rating of 91 RON.

When driving in temperatures above +38 °C, it is recommended to use fuel with the highest possible octane rating for optimum performance and fuel economy.

Petrol: Norm EN 228

NOTE
Extreme weather conditions, towing a trailer or driving at high altitudes in combination with fuel grade are factors that could affect the car’s performance.

IMPORTANT
Use only unleaded petrol to avoid damaging the catalytic converter. In order for the Volvo warranty to apply, never mix alcohol with petrol, the fuel system could be damaged.

Petrol

Most engines can be run with octane ratings of 91, 95 and 98 RON.

- 91 RON must not be used for 4-cylinder engines and should only be used in exceptional cases with other engines.
- 95 RON can be used for normal driving.
- 98 RON is recommended for optimum performance and minimum fuel consumption.

Diesel

The diesel engine’s fuel system is sensitive to contaminants, see page 179.

Diesel: Norm EN 590 or JIS K2204
The purpose of the catalytic converter is to purify exhaust gases. It is located in the flow of exhaust gases close to the engine so that it quickly reaches operating temperature. The catalytic converter consists of a monolith (ceramic or metal) with channels. The channel walls are lined with a thin layer of platinum, rhodium and palladium. These metals act as catalysts, i.e. they participate in and accelerate a chemical reaction without being used up themselves.

**Lambda-sond™ oxygen sensor**

The lambda-sond is part of a control system intended to reduce emissions and improve fuel economy.

An oxygen sensor monitors the oxygen content of the exhaust gases leaving the engine. This value is fed into an electronic system that continuously controls the injection valves. The ratio of air to fuel is continuously adjusted. These adjustments create optimal conditions for efficient combustion, and together with the three-way catalytic converter reduce harmful emissions (hydrocarbons, carbon monoxide and nitrous oxides).
11 Specifications

**Electrical system**

**General**

12 V system with a voltage-regulated alternator. Single pole system in which the chassis and engine block are used as conductors.

**Battery**
